Attendees (add your name if not listed)

Here	Name		Here	Name		Here	Name
	Steven Bischof			Richard Lammert			Paula Sullenger
X	Noah Brubaker			Ann Kardos		x	Brooks Travis
X	Lloyd Chittenden			Shirley Moentnish		x	Martina Tumulla
	David Dahl			Peter Murray		X	Steve Walker
X	Kelly Drake		X	Rose Nelson			Kristen Wilson
	Jennifer Eustis			Elena OMalley		X	Theda Schwing
	Janice Gustaferra		X	Peter Sbrzesny			
	Lucy Harrison			Joe Springer			

Discussion items

Item	Who	Notes
Possibility of connecting to Innovative's Direct to INN-Reach APIs	Brooks	Brooks says that Missouri State is going live on FOLIO on Monday. They would like to continue to participate in the Mobius INN-reach consortium. Mobius has requirements for members that make it impossible to MSU to continue unless FOLIO had the API functionality required for INN-Reach. Perhaps these functions could live in FOLIO or ReShare or an outside app? Mobius will be on INN-Reach for at least 5 years, and probably will continue as long as III supports the INN-Reach system. Rose says III is working on Koha integration and Alma is next for INN-Reach integration. Prospector has no plans to leave INN-Reach

		until there is another product that could work with all these different ILSs as well. The implementing library would take the lead on developing this as an integration. Like integration with a new discovery platform. MSU could do this for an integration with INN-Reach. Who would be interested in developing this? Marmot, Prospector, Boulder maybe. PALNI is interested in resource sharing between different consortial systems. Kelly: Suggests connecting to Kate's delivery project. Check with RA SIG. Currently FOLIO only allows requests on an individual item. In the INN-Reach system, when an item is checked out at a different library a virtual item exists as a stub on the requesting patron's record and a virtual patron record exists on the item record in the source system. The patron is the patron, not the library. It uses the patron record from the home system for the virtual record. Brooks will come back in 2 or 3 weeks.
Cross app searching in a consortia context	All
