

Field Reconnaissance Checklist

Name of Project: Input data	Originator: Input name and initials	Date:
Project Location: Input data	Checker: Input name and initials	Date:

Structure Number (as applicable): Input data
Project Number: Input data
PIN: Input data

TITLE BLOCK		Provided (Originator)		Chk	Comments
	Yes	No	NA		
Complete all information required in the standard title. Top line = project name Second line = project location Third line = UDOT project number					
Complete the title block.					
Fill in initials, dates, and signatures.					

FIELD RECONNAISSANCE (Originator) Chk Yes No NA During the field reconnaissance, the geotechnical engineer and/or geologist learns about geotechnical, topographic, and geologic features of the site, and about access and working conditions; including at least the following: Previous and current design and construction plans (new site, relocation, widening, replacing, cuts, fills, etc.)	Yes No NA
During the field reconnaissance, the geotechnical engineer and/or geologist learns about geotechnical, topographic, and geologic features of the site, and about access and working conditions; including at least the following: Previous and current design and construction plans (new site, relocation, widening, replacing, cuts, fills,	nical

least the following: Previous and current design and construction plans (new site, relocation, widening, replacing, cuts, fills,	
Previous and current design and construction plans (new site, relocation, widening, replacing, cuts, fills,	ng at
(new site, relocation, widening, replacing, cuts, fills,	
etc.)	s, fills,
Current and previous land use (fills, remnants, debris,	
foundations, hazardous waste, sanitary dumps, etc.)	
Maintenance history and existing conditions (e.g.	e.g.
UDOT Maintenance)	forms .
Obtain completed and signed Permit to Enter form	
General site conditions (topography, groundcover,	
plants, surface soils, boulders, topsoil, fills, water	ater
effects on landscape and topography, etc.)	
Geologic reconnaissance	
Geomorphology Landslides and/or rockfall history/potential	
Preliminary layout of subsurface explorations	
Restrictions affecting equipment access	
Equipment required for subsurface explorations,	
including any specialized equipment needed (pumps,	
wet drilling, rock coring, track mounted equipment, skid rig, earthwork to facilitate access, spoils	nent,
containment and catchment, boats, pontoons, etc.)	oto \
Traffic control requirements during field investigations	
Feasibility and need for long-term groundwater	
monitoring	⁷¹
Location of underground and overhead utilities	
Type and condition of existing facilities (pavements,	
bridges, visible utilities, buildings, etc.), including	
existing cracks and other possible evidence of	
distress.	`
Adjacent land use (schools, churches, research	ch
facilities, businesses, etc.)	
Restrictions on working hours

Field Reconnaissance Checklist

Dight of way constraints	
Right-of-way constraints	
Environmental issues	
Escarpments, outcrops, erosion features, surface	
settlement, cuts, fills, stream banks, scour, etc.	
Flood plains and flood levels	
Streams, rivers, and water conveyance and storage	
facilities (canals, ponds, culverts, ditches, creeks, etc.)	
including characteristics (e.g., pipe materials, canal	
liners) and their condition (potential leaks, etc.)	
Water traffic and access to water for subsurface	
explorations (surface water, nearby wells, springs,	
etc.)	
Benchmarks and other reference points (survey	
stakes, etc.) to aid in the location of boreholes	
Equipment storage areas / security
