

Article Title (14 point font, boldface, centered, max 15 words completed with subtitles if necessary, the title of the article should be concise, interesting and describe the content of the article.)

(One blank single space line, 14 pt)

Write the first author ^{1*}; second author ²; third author ³

¹ First author affiliation, address, state

² Second author affiliation, address, state

³ Third author affiliation, address, state

*email: author@mail phone: +00 000 0000 0000

(One blank single space line, 12 point font, boldface)

Abstract (10 pt, bold)

(One blank single space line, 10 pt)

Abstract should be written using Times New Roman font, size 10pt, right justify, and one paragraph-unstructured with single spacing. The abstract is an unstructured paragraph. The abstract should state the problem, the purposes of the study or investigation, methods or basic procedures (research design, selection and size of study subjects; observational and analytical methods), and the principal conclusions. It should not contain any references or displayed equations. The abstract should be no more than 300 words.

(One blank single space line, 12 point font, boldface)

Keywords: 3 to 6 words/ phrase in English, (10 point font), give semicolon (;) between words/phrase.

(Three blank single space lines, 12 point font, boldface)

Introduction (14 point font, boldface, cap in the first letter of headings)

(One blank 1,5 space line, 12 point font)

The manuscript is written with Times New Roman font size 12, 1,5-spaced, left and right justified, on one-sided pages, paper in one column and on A4 paper (210 mm x 297 mm) with the all margins 2.5 cm. The Standard English grammar must be observed. The title of the article should be brief and informative and it should not exceed 15 words. The title of the manuscript does not have to be the same as the title of the research proposal and must be written in capital letters, and completed with sub titles, if necessary. Authors should not just write words such as study/ relationship/ influence in the title because the title should indicate the results of the study, for example. The title should contain the main keyword and do not use abbreviations, numbering around 15 words. The keywords are written after the abstract.

(Between paragraphs are spaced one blank, 1,5 spaced, without indentation)

The full name of the author (without academic title) and include the author's institution / affiliation (name of institution, address, country) is placed below the manuscript title. The order of the author based on his contribution to the writing process. After the authors name is written with superscript numbers to mark the affiliation author. One author, affiliates can be more than one, for example Rifki Febriansah¹, Ahmad Taufik², Josephine³.

Affiliates and address of the authors. Give the number according to the name of the author, for example 1. Department of Maternal and Women's Health Nursing, Faculty of Nursing, Universitas Indonesia, Prof. Dr. Fulan Fulanah Street, Bantul, Yogyakarta – 55183. Correspondence address is email address of the one of the author, for example fulanah@umy.ac.id and also phone number.

The use of abbreviations is permitted, but the abbreviation must be written in full and complete when it is mentioned for the first time and it should be written between parentheses. Terms/Foreign words or regional words should be written in italics. Notations should be brief and clear and written according to the standardized writing style. Symbols/signs should be clear and distinguishable, such as the use of number 1 and letter l (also number 0 and letter O). Avoid using parentheses to clarify or explain a definition. The organization of the manuscript includes **Introduction, Methods, Results and Discussion, Conclusions, and References. Acknowledgement** (if any) is written after **Conclusion** and before **References** and narratively, not numbered. The use of subheadings is discouraged. Between paragraphs, the distance is one space. Footnote is avoided. This manuscript uses Vancouver style as citation.

Introduction must be no more than three paragraphs, and the last paragraph must contain the purpose of the research. In general, introduction includes a background, a rationale, a literature review, an underlying theory, and results expected from the study. Introduction contains justification of the importance of the study conducted. Novelty generated from this study compared the results of previous studies or the umbrella of existing knowledge needs to be clearly displayed. Complete it with main reference used. State in one sentence question or research problems that need to be answered by all the activities of the study. Indicate the methods used and the purpose or hypothesis of the study.

(One blank 1,5 space line, 12 point font)

Methods (14 point font, boldface, cap in the first letter of headings)

(One blank 1,5 space line, 12 point font)

Methods elaborate materials and tools used (if stated), contain detailed steps for conducting research and explain the method of data collection and analysis in a narrative form. In more detail, method should contain the design, the size, criteria and method of sampling, instruments used, and

procedures collecting, processing, and analysis of the data. When using a questionnaire as instrument, explain the contents briefly and to measure which variables. Validity and reliability of instruments should also be explained. In the experimental or intervention studies need to be explained interventional procedure or treatment is given. In this section it should explain how research ethics approval was obtained and the protection of the rights of the respondents imposed. Analysis of data using computer programs needs not be written details of the software if not original. Place/location of the study is only mentioned when it comes to study. If only as a research location, the location details not worth mentioning, just mentioned vague, for example, "... at Biological laboratory, Universitas Muhammadiyah Yogyakarta."

Results and discussion (14 point font, boldface, cap in the first letter of headings)

(One blank 1,5 space line, 12 point font)

The findings are sorted by the objectives of the study or the research hypothesis. Show the results with a clear description supported by table illustrations, pictures, diagrams and such that are easy to understand. The results do not display the same data in two forms namely tables/ images /graphics and narration. No citations in the results section. The average value (mean) must be accompanied by a standard deviation. Writing tables using the following conditions.

Table only uses 3 (three) row lines (do not use a column line), the line heading, and the end of the table (see example). Table is written with Times New Roman size 10 pt and placed within a single space below the title table. Table titles is written with font size 9 pt bold, capital letters at the beginning of the word and placed on the table with the format as shown in the examples that do not use the column lines. Numbering tables are using Arabic numerals. The table framework is using lines size 1 pt. If the table has many columns, it can use one column format at half or full page. If the title in each table column is long and complex, the columns are numbered and its description given at the bottom of the table. Mean, SD, and t-test values should include value of 95% CI. Significance value is put with not mention P at first. Example: The mean age 25.4 years intervention group (95% CI). Based on the advanced test between intervention and control groups showed significant (example: $p < 0.05$; CI= ... - ...).

Images are placed symmetrically in columns within a single space of a paragraph. Pictures are numbered and sorted by Arabic numerals. Captions placed below the image and within one single

space of the image. Captions are written by using 11pt font size, bold, capital letters at the beginning of the word, and placed as in the example. The distance between the captions and paragraphs are two single spaced.

Images which have been published by other authors should obtain written permission from the author and publisher. Include a printed image with good quality in a full page or scanned with a good resolution in the format {file name}.jpeg or {file name}. tiff. When the images are in the photograph format, include the original photographs. The image will be printed in black and white, unless it needs to be shown in color. The author will be charged extra for color print if more than one page. The font used in the picture or graphic should be commonly owned by each word processor and the operating system such as Symbol, Times New Roman, and Arial with size not less than 9 pt. Image files which are from applications such as Corel Draw, Adobe Illustrator and Aldus Freehand can give better results and can be reduced without changing the resolution.

Here is an example of a table

Table 1. The Characteristics of the Respondents (capital letters at the beginning of the word 11 pt, bold, left justify)

(blank one single space line, 11pt)

Client's Initial	Age	Major Problem
Mr. BN	56	Aggressiveness
Mr. MA	40	Withdrawal
Mr. AS	45	Swing Mood

(Blank two single space line, 10pt)

Here is an example of an image

(One blank single space line, 10 point font)

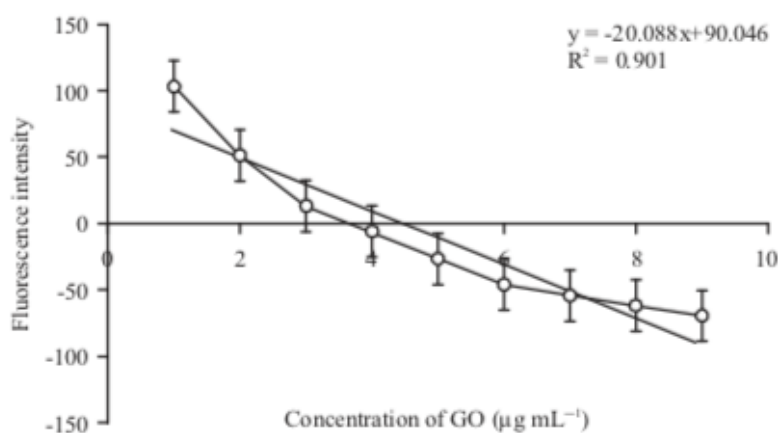

Figure1. Effect of GO concentration on the fluorescence intensity of the molecular beacon probe with MB concentration of $5 \mu\text{g mL}^{-1}$ and GO concentration $1-9 \mu\text{g mL}^{-1}$ (Capital Letters in the Beginning of the Words, 11pt).

(One blank single space line, 11 point font)

Describe the discussion by comparing the data obtained at this time with the data obtained in the previous study or references. No more statistical or other mathematical symbols in the discussion. The discussion is directed at an answer to the research hypothesis. Emphasis was placed on similarities, differences, or the uniqueness of the findings obtained. It is need to discuss the reason of the findings. The implications of the results are written to clarify the impact of the results the advancement of science are studied. The discussion ended with the various limitations of the study

(One blank 1,5 space line, 12 point font)

Conclusions (14 point font, boldface, cap in the first letter of headings)

(One blank 1,5 space line, 12 point font)

Conclusions section is written in narrative form. The conclusion is the answer of the hypothesis that leads to the main purpose of the study. Avoid speculation in making a conclusion. The conclusion must be based on facts found in the study, must contain something new in the field of the study, and must directly relate to the research problem that has been formulated. The sentences in the

~~conclusion must not repeat the result previously explained. In this section is not allowed to write~~
other authors

work, as well as information or new terms in the previous section did not exist. Recommendation for further research can be written in this section.

Acknowledgement

Acknowledgement is given to the funding sources of study (donor agency, the contract number, the year of accepting) and those who support that funding. The names of those who support or assist the study are written clearly. Names that have been mentioned as the authors of the manuscripts are not allowed here. The acknowledgement must be addressed especially to the funders along with the research contract number.

Conflict of interest

Please write statements about a conflict of interest. This may occur when the author or the author's affiliation has a financial or personal relationship that can influence the research conducted (bias) such as a double commitment, competition of interest, or competition of loyalty. If there is no conflict of interest, the author must state that all authors declare that there is no potential of conflict of interest with the research, authorship, and/or an article publication.

References

Reference is written with Times New Roman font size 10 pt, single space, the distance between the references one enter. All sources in the reference must be referenced in the manuscript and what was in the manuscript should be in this reference. The references must be written based on the **Vancouver** authorship regulation, relevant to the issue of the research, must be the latest (the past 10 years), total of 80% of the references used must be primary references, and it is recommended to use the Endnote, Mendeley, Zotero, or Reference Manager applications. Please note the rules of writing references as have written in author guidelines.
