

Ocean Practices OBPS Workshop VI 05 -19 October 2022

Deep Ocean Observing:

Technology Best Practices: Building Capacity of Deep Ocean Observing

Date: Thu Oct 13 2022, 16:00 - 18:00 UTC

The session will begin with speakers from across academia, industry, and non-profit communities discussing successful examples of the development of low cost technology for sampling the deep sea. This will be followed by a Community Round Table where other members of the community are invited to share their successes, challenges, and needs in this arena. To sign up to make a 3 minute presentation during the community round table, please [email Leslie.smith@youroceanconsulting.com](mailto:Leslie.smith@youroceanconsulting.com).

The remainder of the session will focus on an open discussion of how to increase the accessibility of low cost technology through the development of shared best practices and open source information, how best to package that information, and how to share/disseminate it for maximum impact. Our hope is for this session to provide a space for the community to interact with creative ideas on lower-cost technology alternatives and solutions to observe the deep ocean.

This session is co-hosted by the Deep Ocean Observing Strategy, the National Autonomous University of Mexico, and the Ocean Discovery League
