Introduction

The introductory part consists of a description of the background of the problem, benefits of research, theoretical studies, and ends with objectives and/or hypotheses. This section contains; (a) a description of the latest developments in the research topic under study, supported by the results of primary and recent literature reviews; (b) description of the gap (in the form of evidence gap, knowledge gap, practical-knowledge gap, methodological gap, empirical gap, theoretical gap, or population gap); (c) the researcher's argument about efforts to close the gap which shows commitment to the contribution of research to the development of science; and (d) description of the research objectives and/or hypotheses. If the description requires a description in pointer form, then you are required to make each point part of the paragraph.

The maximum number of introductory pages is 20% of the total pages, written in Times New Roman 11 with 1.15 spacing.

Methods

The method section consists of a description of the research approach and design, identification of variables, research subjects, data collection techniques, research instruments (name of measuring instrument and its manufacturer, aspects measured, number of items and several examples, as well as information on validity and reliability), research procedures (in This section explains ethical clearance, if any), and the statistical analysis techniques used. Description of each section, can use subtitles or without subtitles.

The explanation in this section focuses on a clear descriptive explanation of the various activities carried out by researchers in conducting research, so

that it can provide opportunities for other researchers to replicate or verify the research procedures carried out. Avoid including definitions regarding parts of the method, for example: definition of population.

Results and Discussion

The research results consist of a description of the data obtained in the research. The data in question is not raw data that is still or needs to be processed, but data resulting from analysis or hypothesis testing that clearly answers research questions and shows the latest findings obtained. If presented in the form of tables or pictures, the meaning should be easy for readers to understand quickly.

The discussion section is a description of the researcher's analysis of the research results obtained, by linking them to the results of previous studies. The description in this section focuses on critical and substantial analysis of research results and comparison with previous findings based on the results of relevant, up-to-date and primary literature reviews. Comparisons should lead to differences with previous research findings so as to show the contribution of research to the development of science. In the final section, the limitations contained in the research are presented. The minimum number of discussion pages is around 30%, which in principle is no shorter than the introduction page.

The research results section is described first, then the discussion section (can use subtitles or without subtitles).

Conclusion

The conclusion section is a formulation of answers to the research objectives and research questions asked. Conclusions are not a summary of research results. When explaining conclusions, they should be made concisely, clearly and concisely based on the results and discussion. Conclusions must be made in paragraph form, not numerical. The conclusion explains the research findings and new things that contribute to the development of psychology.

Acknowledgments (if any)

This is a short text to acknowledge the contributions of colleagues, institutions, or agencies that aided the efforts of the authors.

References

Making a bibliography using a reference manager, such as Mendeley, EndNote, or at least the References feature in Microsoft Word using APA Style 7th Edition.

The reference list is written alphabetically and chronologically. The Reference List must contain all sources referred to in the manuscript, originating from sources that are: (a) relevant, (b) at least 81% up to date (maximum of the last 5-10 years), and (c) at least 81% primary, especially from journal articles.

[Article Writing Format]

Articles are written in good and correct Indonesian or English, neatly typed in Times New Roman font size 11 with 1.15 spacing, left-right aligned, and printed on A4 paper. Articles are arranged with the following margins: Top: 3 cm, Left: 3cm, Right: 3cm, Bottom: 3 cm, Gutter: 0, with Gutter Position: Left; uses a two column format.

[Subtitle Writing]

First Subheading (Title Case, Bold, Left Aligned, Blue)

Second Subheading (Title Case, Bold, Left Aligned)

Third Subheading (Title case, Bold, Italics)

Fourth Subheading (Title case, bold)

Fifth Subheading (Title case, italics)

[Writing Quotes]

The source of the in-text quotation is written between the opening and closing brackets stating the author's last name, year with a comma, and page number if deemed necessary:

- If the quotation comes from one source and one author: (Javed, 2017), or (Javed, 2017, p. 27).
- If the quote comes from one source with two authors: (Fernandez & Walker, 2021) or Fernandez and Walker (2021)
- If the quotation comes from one source with three or more authors: (Guo et al., 2022) or Guo et al. (2022)
- If the quotation comes from two different sources by the same author: Peterson, 2014, 2018), if the year is the same (Peterson, 2014a, 2014b).
- If the quote comes from the institution: (UIN, 2019).

Tables, Figures and Formulas

Each table or figure is given a sequential number, title, according to the contents of the table and figure, and the source of the quotation if any. The source of the quote is written below the table or image, Times New Roman font size 10. The table title is written above the table and the image title is written below the image. The formula was created using the Equation feature in Microsoft Word.

Example table:

Table 1 (table nomor)

Validity and Reliability of Measuring Instruments (table description, Title Case, italicized)

Dimension	Validity	Reliability
Integrative psychological wellbeing	.944	.969
Dukungan petugas	.980	.890
Coping Strategy		
Logical analysis	.961	.620
Guidance support	.950	.600

Picture example:

Figure 1. Sociocultural disharmony in the form of poverty and mental health issues

Figure 1. Image caption... (if the image is taken from another source, must include the source; Center position if the caption is 1 line, and Align Text Left if it is more than 1 line).

Example formula:

Use the Equation feature in Ms Word. Number the equations starting from (1), (2), etc.

$$(1 + x)^n = 1 + \frac{nx}{1!} + \frac{n(n-1)x^2}{2!} + \dots$$

(1)
