Please add your name and provide if you want a brief pitch (max. 1500 characters) why you consider you are a good candidate for occupying a seat as "remarkable individual" in the FIWARE Technical Steering Committee. You can check the <u>list of candidates in 2022</u> as reference.

Candidates will be finally placed **in alphabetical order of their Surname**. We would rather appreciate it if you add your name in the right place according to this criteria. That would make the ordering faster.

IMPORTANT REMINDER: You will be able to provide your candidature until September 19th, 12:00 pm CET.

Name of candidate	Surname of candidate	Candidature "pitch" (max 1500 characters)
Carlos	Corrales	I ask for your support for re-election to the Technical Steering Committee. My dedication to FIWARE is continuous and proven: Experience: Since 2014, I have been an active advocate of FIWARE, using this technology in a multitude of projects for different clients, accumulating a wealth of knowledge and vision for its future. FIWARE expertise: My recognition as a FIWARE Expert by the foundation supports my commitment and technical capabilities. Secmotic and FIWOO as Gold Members: Both companies I co-founded are Gold Members of the foundation. FIWOO's success: FIWOO, built on FIWARE GEs, is not just a business; it is proof of FIWARE's transformative potential. It embodies our shared vision of innovative smart solutions, allowing anyone without technical knowledge to use FIWARE.
		Re-election means continuity in experience, dedication and a shared vision for FIWARE's future. I pledge to continue to push FIWARE technology to new horizons.
Chandra	Challagonda	Part of FIWARE Foundation's CTO team as a Senior Architect for over four years. I have been involved in the FIWARE Foundation ecosystem since 2015 as a Board Member and active contributor. I am always promoting FIWARE technologies and architectures. I have been a catalyst for adopting NGSI-LD as a national Open API standard for Government data in India. I have been part of the team defining the technical speciations for public tenders by three cities using NGSI-LD standard and FIWARE reference architecture and as an architect

		for 8 FIWARE-based deployments across Europe. I am good at understanding the customer's requirements and creating technical specifications & architecture that suit customers well using FIWARE technologies and FIWARE-based architecture. I will promote the adaptation of FIWARE technologies and reference architecture for various EU-funded projects and customers. I will bring valuable insights from the customers and the projects adapting FIWARE technologies and reference architectures to TSC.
Davide	Dalle Carbonare	I've been involved in FIWARE since the very first EU project that started all the FIWARE ecosystem and I'm mostly dealing with technical aspects related to the Generic Enabler and their adoption in the context of Data Spaces. I believe in collaboration among associations and especially in the Data Space Business Alliance where I can help because I'm also involved in the Big Data Value Association (Board of Directors and co-leader of the Smart Manufacturing Industry group). I promote the adoption of FIWARE GEs and FIWARE concepts in various EC and national funded projects especially in those related to (Big) Data and Artificial Intelligence. I've been in the TSC for a long time now and I would be honoured to continue to serve the FIWARE Community and help in making this great initiative to grow even more.
Stefano	De Panfilis	FIWARE Foundation COO and as such responsible for all operational aspects supporting the life of the FIWARE Community. Founder of the FIWARE Foundation, also formally having signed the constitutional act, and in FIWARE since it was FI-WARE and even before having participated in the creation of the FI-PPP from where the FIWARE programme was created. Fully and continuously supportive of FIWARE in all dimensions. Creator and responsible of the Quality Assurance team. Member of the FIWARE TSC since its birth.
Christian	Drucks	I am the CTO of Herne. Digital. Together with Ideasforum e.V. we form the FIWARE Innovation Hub for the city of Herne. As a subsidiary of the city of Herne, we implement all Smart City applications that the city has adopted in its digital strategy (50+ Projects by 2030). We are operating a FIWARE data platform productively for over a year and have successfully implemented several projects in

		the areas of Smart Mobility, Smart Energy and Smart Environment. We also work in various funded projects in which FIWARE technology is used, e.g. Seguro or BeOpenAl.
Juanjo	Hierro	FIWARE Foundation CTO, engaged in FIWARE since its creation. Always willing to serve the FIWARE Community and playing the role of FIWARE Evangelist. Led the efforts towards adoption of Context Broker technology in the CEF and Digital Europe programs as well as the creation of the Context Information Management (CIM) ISG at ETSI where the NGSI-LD standard was defined. I have worked hard to position FIWARE as basis for architecting solutions based on the Digital Twin concept, implementing a system of systems vision that helps organizations to transform into smart organizations or the implementation of Data Spaces for data sharing among organizations. I have brought support to main FIWARE tech roadmap WGs and the development of a FIWARE vision in areas like integration with blockchain/DLTs, robotic systems, data spaces or Al/ML frameworks.
Otto	Schell	As CEO/Founder of the Institute for Global Digital Creativity and Relevance (www.igdcr.net), are we relevant tomorrow (www.arewereto.co) and GPerfect (www.gperfect.net) I am connected within the ECO-System and can leverage as Alumni / former Member of the Board of Directors of the German Speaking SAP User group (DSAG) within a large community. Being also engaged ZukunftFabrik.2050 (powered by HSG Alumni) my contribution will be connected uses cases and network connections, driving towards future ways of living/acting and collaborating.
