Honeycomb

Honeycomb is an ERC721 NFT which is created by the smart contract once it has been supplied with an OG Bong Bear.

How can I get Honeycomb?

There are three ways you can access Honeycomb:
1. Free claim
2. General mint
3. Secondary markets

1. Free Claim

The Honey Jar has iterated on the AirLock design created by the Apeliens Larvae NFT project. In their design the AirLock was a way to supply partner communities with passwords to AirLocks ahead of general mint which would allow them to get early access to minting before open to the general public.

There are three ways you can claim free Honeycomb:
1. The BearGate
    a. A wallet is eligible for one honeycomb per rebase of the Bong Bear collection or holding a Bonga Bera 101 collectible that is in the wallet by the beginning of the Hibernation game.
    b. The BearGate will be the first gate which opens and will be open for 24 hours before the FrenGate and the PartnoorGate opens.
    c. Holders of The Honey Jar bear equivalent digital collectibles from https://mirror.xyz/janitooor.eth are included.
    d. Eligible wallets will have access to the free claim as well as general mint (early mint)
2. The FrenGate
    a. If you hold either a token or an NFT listed in the frens list at the beginning of a Hibernation game you will be eligible for a number of free claims.
    b. The FrenGate will open at the end of the BearGate period and will be open for 48 hours before General Mint.
    c. Holders of The Honey Jar fren gate equivalent digital collectibles from https://mirror.xyz/janitooor.eth are included.
    d. Eligible wallets will have access to the free claim as well as general mint (early mint)
3. The PartnooorGate

a. The Honey Jar partners with projects, protocols and their communities. Each partnooor may supply an allowlist of wallets which will be eligible for free claims.
b. Winners of Honey Jar retro games will also be added to a bucket of free claims.
c. The PartnoorGate will open at the end of the BearGate period and will be open for 48 hours before General Mint.
d. Eligible wallets will have access to the free claim as well as general mint (early mint)

Free Claim Limits

The following limits will be published at the beginning of a Hibernation game:
- The maximum which a wallet can claim per Gate.
- The minimum token holding of tokens listed on the FrenGate list

When are snapshots taken?

A snapshot will be taken at the beginning of each Hibernation game.

First Come First Served

Each free claim gate will be on a strict first come first served basis.

2. General Mint

- General mint opens 72 hours after the BearGate opens and 48 hours after the FrensGate and PartnoorsGate opens. There is no limit on the number of Honeycomb a wallet can purchase.
- When the general mint bucket is exhausted it will start to draw from any of the free claim buckets which still have capacity.

3. Secondary Markets

- Anyone is free to setup a secondary market at anypoint
- The Honey Jar team may set up liquidity via services such as Caviar, Sudoswap and Llamalend to offer liquidity for Honeycomb. TBC.

Pls note these are just the frens list partners. THJ is also partnering with a wide number of berachain partners (announcements thooon). The difference between FrenGate and PartnerGate is that FrenGate is all one big bucket of freeclaims. PartnerGate each partner gets a dedicated bucket of free claims just for their community - so it's much less competitive FCFS (1st come 1st served). Add a comment below if you think a token or nft should be added to the FrenGate list:
