4				<div> <p>NOTES:</p> <ul style="list-style-type: none"> <li>You would need to recreate this for your own mineral collection.</li> <li>I shade the cells that I think, as a geologist, aren't the most important or indicative pieces of information for a given mineral. For example, Sample #1 here is quartz and really if you know that it's very hard (&gt;6) and has conchoidal fracture, then you've got it. The luster, streak, and color are just not vital for quartz.</li> <li>I also list "N/A" for samples or minerals whose fracture/cleavage are not easy to identify in general or in the samples that I give the students. Otherwise, they just get confused.</li> </ul> </div>
