Correction

In the video, Shreyas mistakenly says a “trillion dollars of Russian assets were frozen.” This should have read, “trillion Russian rubles worth of Russia’s assets were frozen.” In reality, $300 billion to $330 billion of Russian assets were frozen.

Comment

We reached out to the New York Federal Reserve, but did not receive an opportunity to document the gold vaults. We did not receive comment about the rate at which gold is leaving, or a day-of-updated exact figure of how much remains.
