[SAMR model](#)--get teachers into technology in lessons
        start getting teachers into using tech in lessons with one thing
        move them along the SAMR model to transform teaching/learning

BYOD management--
        [management software](#) options
                virtual desktop is same even though a different device
        rules for what to bring
        rules for using at school
                teach parents and the students

Tech committees and subcommittees
        need teacher input
        make a tech director position or extra-curricular position
                or maybe call them a tech coach
        Important to find the stronger staff members to help besides the tech director
        know when to outsource

Tech directors can work with third party vendors (companies like DVI) to work with networking and hardware...that way new teachers won't have to worry about network configuration
        outsource some jobs--networking, wi-fi, etc
        things to keep with teacher staff--professional development, grading program, GMC,
                $$ vs time spent
                        $80/hr, $125/hr in 15min. increments for outside consultants
                set amount tech guy can spend without requisition requests
                professionals install wi-fi, install/manage firewall
