Part 1. Self Check

- Do you have at least five sql files that create a view or function? [Yes/No](#)
- Do the filenames match the view/function names? (If not, git mv) [Yes/No](#)
- Do these views/functions actually exist in your group database? [Yes/No](#)
- For each view/function, is there a corresponding html file/chart? [Yes/No](#)
- Is your database diagram up to date based on changes in GP3? [Yes/No](#)
- Have you created indexes so that each query will run efficiently? [Yes/No](#)

Part 2. Team Demo

| Query | Description | Results | Feedback |
|---|---|--|---|
| <i>Paste the name of each view or function below.</i> | <i>Paste the comment from the top of the source file.</i> | <i>Is the type of chart appropriate for the query? Does the chart accurately convey the results?</i> | <i>Is the query interesting? Are the results compelling? Does it align with the project's vision?</i> |

Part 3. Code Review

| Query | Design | Correctness | Quality |
|---|--|---|--|
| <i>Paste the name of each view or function below.</i> | <i>Does the view/function name make sense? Are there any unused parameters? Should the query be generalized?</i> | <i>Is the query written correctly? Do the comments at the top of the source file match what the SQL code actually does?</i> | <i>Is the source code formatted neatly, organized well, and readable? Have all project files been added to GitHub?</i> |
