

How to remove a Profile on a Chromebook

Sometimes it is necessary to remove a user profile from a Chromebook, and start over with a new profile. This does not delete any of your files - those are all stored in the Google Cloud.

Sign out of the Chromebook

- Click the Taskbar (clock) icon located at the bottom right corner of the screen, and then click **Sign out**

Remove the Account

- Once you are back to the login screen, click the down arrow next to the name of the account you want to remove.
- Next, click **Remove this user**, and then click **Remove this user** to remove the account.
- Now just follow the prompts and sign in with your user account and password and your account will be re-added to the Chromebook.
