

CryptoMonkz DAO

Expansion proposal

Proposal #	4 v.2.0
Name	Compromised CryptoMonkz Genesis Assets Framework
By	TheFireConvoy & Brendyn
Date	10 November 2022

Introduction

Compromised Cryptomonkz NFTs are a serious and impactful issue to the Victims, the DAO, and to DAO members.

Victims lose their investments, associated voting rights, and other benefits.

Listings below the floor price damage the value of Cryptomonkz NFTs.

Moral conflict and damage to the social fabric of the community occurs when there is a lack of policy on how community members should react.

There is no perfect answer, but the policies, processes, and recommendations contained herein provide a framework on how we can best respond to these unfortunate incidents.

Victim's Action Plan

If you are a victim of a wallet compromise, you should take immediate action to mitigate further loss. There may be actions you can take independently based on your own circumstances such as revoking wallet permissions. That said, you are urged to reach out to the Monkz Temple Guard immediately so they may provide guidance on the actions you need to take and work to communicate details of the compromise to the community.

Official Community Announcements

We ask that you do not provide direction to the community. All communication about the incident should be handled through the Temple Guard and Community Manager in official Discord channels. No official statements shall be released surrounding the root cause, post mortem, or post mortem directive outside of this process. This will reduce confusion on the part of the community and provide clear and concise "next steps" during a security incident.

The Temple Guard and Community Manager will work with you to release statements via Discord announcements. If possible they will provide your clear directive to the community based on the options below as soon as you are confident on how you would like to proceed. If you are not ready to make a decision at this time, then the first announcement will be more limited in scope to notification purposes only.

The Temple Guard will engage with you in private group chat and voice chat to:

- Consult on the security compromise
- Attempt to mitigate further losses
- Quarantine the threat
- Identify the cause of the compromise.

You will need to provide guidance on how you wish the community to respond to the potential post of your NFTs for sale by the malicious party.

The NFTs are traded on the open market. The DAO does not have authority over the free market to mandate the actions of participants.

**If you do not communicate to the DAO regarding the compromise within 24 hours or
If you plan to report them stolen and file a police report:**

- The community will be notified that purchases are at their own risk.
- Wallets interacting with stolen NFTs could be banned from NFT marketplaces.
- Purchased NFTs will likely become non saleable resulting in loss of principal.
- The DAO will not spend any funds recovering them.
- The NFTs will not be burnt or disabled in any way.

Note that parties affected by unknowingly purchasing compromised NFTs before an announcement is made may submit a support ticket. These will be considered on a one-off basis. The DAO will NEVER take ownership of a reported NFT but may elect to either refund the purchase or provide a replacement NFT. This is not a guarantee that the DAO will take any action on the purchaser's behalf. If the DAO chooses to help, then the Temple Guards will advise you on where to send the NFT(s) prior to refund or replacement. The destination will generally be to a wallet held by the original owner or to a known burn wallet.

If you do not plan to report them stolen and will not file a police report:

We will make recommendations based on your wishes, but market participant actions will be their own. In many cases community members will wish to help you as requested.

- Do you wish to ask community members to buy and return the NFTs to you at cost?
- Do you wish to ask community members to buy them for their own collections?
- Do you wish to ask community members to buy and offer them to the DAO at cost?

General best practices for purchasing NFTs on the Market:

As a best practice you may wish to use a burner wallet to purchase any NFTs - whether they have any reason to believe the NFT is stolen or not. This is especially true if you notice NFTs being liquidated significantly below floor price.

The DAO Quarantine Wallet

The DAO must set up a separate "DAO Quarantine Wallet" isolated from all business as usual assets. The wallet will be used only to hold dedicated funds earmarked for asset recovery and associated purchased NFT assets. This quarantine helps to protect the DAO from being flagged if a victim reneges on their agreement not to report the assets stolen.

Last Monk Stolen Policy

If you are a highly active community member or regularly participate in DAO business and your last Monkz Genesis NFT is stolen, you may submit a support ticket to lobby for temporary reinstatement of your Discord holder role for up to 90 days. A review of your Discord message and DAO participation history will be completed before a decision can be provided on whether to grant this courtesy. If approved, it is meant to be a temporary measure to maintain holder access while you work to recover or purchase a Monkz Genesis NFT. We are stronger as a community with you here and we want to help however we can.

Stolen Eternal Policy

Should an Eternal be stolen, they may be "recovered" by the victim. This recovery process takes place through a process which can best be described as a "swap". The policy is retroactive and may be applied to any previously stolen Eternals.

1. The victim reports the stolen Eternal through the same procedures previously outlined in this document and they notify the Temple guard of their intent to recover the Eternal so that a notification can be sent to the community.
2. The victim will select a Target (non-Eternal) Cryptomonkz Genesis NFT from their wallet to be swapped with the stolen Eternal.
3. As a means of checks-and-balances the Keepers Eligible Voters hold the authority to decide if the requested swap is warranted. This will be determined by a simple majority during a 24-weekday-hour Keepers vote on whether to permit the swap.
4. If the vote passes, the stolen Eternal NFT will become a normal Monk and the Target NFT will become an Eternal. This is achieved by swapping the image, stats, and genome between the two NFTs. No Monkz NFT is burnt or minted in the process.

5. Any costs related to the swap will be covered up to and not to exceed \$100 USD equivalent in combined gas and transaction fees. Any additional costs must be covered in advance by the victim.

Disclaimer

We make a best effort to help our community members in difficult times but you agree we will not be held accountable for any possible shortcomings of those efforts. Cryptomonkz DAO and its representatives take no responsibility for your security or assets. If you choose to communicate with our team members regarding security or asset compromises, you release us from any and all liability and losses resulting from associated communications. We do not guarantee the accuracy of said communications, or that any actions we propose will protect you or your assets, or that any assessment or post-mortem of a security breach will be accurate or complete. It is wholly possible that our advice could make things worse and so you are strongly advised to hire your own professional security consulting firm.
