Handy Tran

KEY:

GREEN: Works/ Fully Functional

YELLOW: Not Working/ Needs Revision/Should Add

RED: Does not work/ Not Implemented

Functions by Page

Login Page

- Login authentication

Home Page

- Search bar filters in order of (1) Name, (2) Date
- Each tile displays the event name, date, location
- View button leads into each event
- Delete (trash can) button deletes the event
 - I'm deleting an event, but the event is still there? Eventually deleted, but I could still click into it

Create Event Page

- Selecting a class from the dropdown will display the selected class' information at the bottom
- Edit class button will allow you edit the class name and description
- Event does not have ability to control min/max judges → need to add
- After you add an event, you should go to event overview vs creating another event
- Does not error check for date or times (ie. end time can be earlier than start time)
- No "Select All" for criteria

Create Class Page

- Name, Description input field, Criteria selection: Check to add, uncheck to remove
- Criteria can be Added, Edited and Deleted from Class
- Why does the help text for Name say "Search"
- When you "Add Criteria" - change the Description help text to "Criteria Description" not Class Description
- No "Select All" for criteria

Users Page

- Search by name (add other filters)

- Add User, Delete User, Edit User
- When you Add a User
 - Judge is permanently selected
 - If I click anywhere in the vicinity of “Admin” or “Judge” - it selects “Admin” - like if I click the text of “Judge” or some space around “Admin”
 - May need to add XXL to the shirt size
 - Password - should be auto-generated, random 4 digit code
 - When I added a user, it didn't show up....
- Can we fix the spacing of the columns? Email, Shirt Size, and Password seems extremely cramped.

Side Nav (when viewing an event)

- Displays the name of the event
- All pages for event works
- Deadline: shows judging end time -> need to change to a clock countdown

Event Pages

- Overview
 - Event Name, start Date, start Time, Location, Description, Teams, and Judges display properly
 - Judging Deadline is a little ugly on a smaller screen
- 1/8/22 - Test Event 5

Judging	3:55	
Deadline:	PM	
- Edit Button Fields: Name, Description, Date, Times, and Location work
 - Online vs In-person toggle does not work
 - When you edit the event info, the existing date doesn't show up
 - Save button edits event and refreshes page automatically
- Student Teams
 - Search Bar filters for team Name
 - Add filter for mentor or project name
 - Add Team:
 - All fields work
 - When adding team members, should there be a comma when the names are listed? I type them with commas, but there's no commas
 - Edit team, Delete team work
 - When editing, the color that shows up is not the color that was originally selected,

- Custom color per team is connected
 - Can you capitalize the first letter
 - What if we want to add more colors? Can we add a grey color?
- The Import icon is different compared to the one to import users
- I have 1 team listed, but up top it says I have 3 teams
- Add delete “are you sure” modal here
- Industry Representatives
 - Search Bar Name filter works
 - Add rep works
 - Edit rep works
 - When deleting industry rep - have a pop up confirmation
 - Issue with the Returning yes or no - not displaying correctly (please also spell out the yes and no)

Returning

add returning
(y or n)

- Judging Assignments
 - Export partially works (need filter for)
 - Check buttons work
 - Clear does work
 - Card View displays judge data, need to be reworked
 - ~~Still have teams that aren't for this event show up in the card view~~

- Criteria

- Add criteria works
 - Got an error

Unhandled Rejection (TypeError): Cannot read properties of null (reading 'includes')

► 2 stack frames were collapsed.

- Edit Criteria/Delete Criteria (deletes from database, can change to only delete from event)
- Project Results (changed from Project Scores to stop confusion)
 - Expand all works
 - Collapsible shows data
 - Export Does not work
- Presentation Scores

- Expand all works
- Collapsible shows data
- **Export Does not work**

Still Need to be Worked on overall

- Import CSV
- Export CSV is done, needs to be applied to all pages
- Responsiveness: some data in tables gets cut off

Feedback

Page	Problem(s)	Comments
Create Class	Class information gets deleted after criteria has been edited.	Move the order of the criteria/ class info, or add a note for users.
Create Class	No confirmation/warning of Criteria deletion.	Add form confirmation or warning prior to deletion.
Create Event	Location type is just a front-end fix but there is no backend	Maybe have a boolean in the database where it's online: True/False
Overview	Don't allow time to overlap (8:00PM - 7:00PM)	Have a function to check if time's overlap (we can also ask if events will always be in 1 day)
Edit Event Info	Class doesn't have to be changed AFTER event has been made	Remove Class field
Search Bar on the Users page	Needs to search by everything except for password	
Search Bar on Student Teams	Needs to search by everything but description.	
Search Bar on Industry Rep	Need to search by everything but password	
Users	Add Password Column	Remove "Returning" column and add it to the Industry Reps table
All forms	Don't allow user to submit unless all required fields are filled	
Both scoring pages	Expand all doesn't expand any of the scores	

Home Page	Really random when it happens but happens too frequently to ignore. Page just errors out for no reason.	<p>TypeError: Cannot read properties of undefined (reading 'name')</p> 
Judging Assignments page	Really random when it happens but happens too frequently to ignore. Page just errors out for no reason.	
Switching between views on admin side	Really random when it happens but happens too frequently to ignore. Page just errors out for no reason.	
<div> Team 1.0 Judging tes Judging test Judging d1 Judging Judging View d1 Judging Cavs Judging </div>	Side-nav gets bugged out when there's too many industry reps + teams
