

Using Online Resources

The Elements and Principles of Good Web Design.

INTRODUCTION

DIRECTIONS

Step 1 - Load the Javascript and CSS

1. Download and unzip the latest version of Lightbox.
2. Look inside the js folder to find jquery-1.11.0.min.js and lightbox.min.js and load both of these files. Load jQuery first.
3. `<script src="js/jquery-1.11.0.min.js"></script>`
4. `<script src="js/lightbox.min.js"></script>`
5. Look inside the css folder to find lightbox.css and load it.
6. `<link href="css/lightbox.css" rel="stylesheet" />`
7. Look inside the img folder to find close.png, loading.gif, prev.png, and next.png. These files are used in lightbox.css. By default, lightbox.css will look for these images in a folder called img.

Step 2 - Turn it on

8. Add a data-lightbox attribute to any image link to activate Lightbox. For the value of the attribute, use a unique name for each image. For example:
9. `<a href="img/image-1.jpg" data-lightbox="image-1" data-title="My caption">Image #1</a>`
10. Optional: Add a data-title attribute if you want to show a caption.
11. If you have a group of related images that you would like to combine into a set, use the same data-lightbox attribute value for all of the images. For example:
12. `<a href="img/image-2.jpg" data-lightbox="roadtrip">Image #2</a>`
13. `<a href="img/image-3.jpg" data-lightbox="roadtrip">Image #3</a>`
14. `<a href="img/image-4.jpg" data-lightbox="roadtrip">Image #4</a>`
