Why should you care a single bit about Hemp 🤔?

Because you have been consuming micro plastics for a long time.

All these flags that you, communities and companies use and buy, release an extremely high amount of microplastics.

As they slowly break, we keep replacing them, and releasing more microplastics.

They fly around, and guess where they end up?

In **Your** and other **Animal's** food, oxygen and water. Can you imagine? YOU ARE BASICALLY EATING PLASTIC!?!?!?

Eating plastic that has been on the street, in the ocean, **literally EVERYWHERE.**

Every week, you eat 5 **grams** of microplastics, and annually you consume up to 100,000 particles of microplastic.

No one ever talks about this problem and we address it, as it is a danger to humans, our environment and other living organisms.

Nearly everything can be replaced by Hemp, and is 100% biodegradable, and environmentally friendly.

What can you do to save yourself, your loved ones?

Order Flags, Tag us in other environment organizations, and tell everyone you know about us.

That's all it takes. Remember, you are eating plastic...
