

Materials Needed: Tin cans Hammer and nail Masking tape marker Tea light candles or LED candles

1. Tin Can: Start by thoroughly cleaning the tin can and removing any labels or sticky residue. Make sure it's completely dry before proceeding.
2. Design: You can create a design for your lantern or simply freehand it.
3. Secure the Design: If you're using a design template, attach it to the tin can using masking tape.
4. Mark the Design: Use a pencil or marker to trace the design onto the tin can. Apply enough pressure to leave an indentation on the can's surface, which will serve as your cutting guide.
5. CreateHoles: use a hammer and nail to make holes along the traced lines of design. These holes will allow the light from the candle to shine through.
8. Insert the Candle: Place a tea light candle or an LED candle inside the tin can.
9. Light the Lantern: Light the candle inside your tin can lantern, and enjoy the warm, flickering glow it produces.

Materials:

Results should be something like this: (Can add Calcifer cut out as a design)
