

Captured Surface Control: Web-developer feedback

What is this document?

This lists Web developer feedback for the [Captured Surface Control](#) API.

Feedback

Google

- They have been using this API as part of Meet. They are strongly supportive of this API.

Riverside

- “Yes, we would like to endorse this API. Let me know if you want us to send an email explaining why this is important for us.”
- Source: Email from CEO.

Tella.tv

- “We are in support of this API, it would enable new usecases for users recording in our product. They wouldn’t always have to switch to their tab to influence their screen share, which makes the whole experience better for them. We’re also looking forward to being able to set the zoom level ourselves based on their stored preferences in our product. To be useful for us it should also ideally support scroll forwarding with overlays since we have those in our recorder.”

Dugongi

- “have been participating in the Captured Surface Control origin trial. The API provides the functionality I need.”
- Source: Issue filed on repo in <https://github.com/screen-share/captured-surface-control/issues/36>

SYNVERSO

- “...with zoom control and even on-screen gestures (if I read it correctly that it could be supported), in our dev cycle, is a feature that nice to have, and one day I'm pretty sure that we would use it (or at least some part of it)”
