Materials Brainstorm

In order to create a Rube Goldberg machine, it is valuable to consider how materials can be used. In your group, record different materials and use pictures and/or words to describe how these materials can be used. I put a few examples in.

Material	Description of how it could be used	Sketch
Rubber band	Stretch it out and release it to snap a different object. (Use of elastic energy to kinetic)	
Pipes	You could have a ball roll through so the ball does not go off the track	
cardboard boxes	You could use cardboard boxes to make a shoot of some sort to get a remote to the place it needs to go to.	
Slingshot	Like something could roll into the slingshot, get slung and cause a chain reaction to something else
