

CHEAPEST IOS METHOD FOR POKECOINS

LITERAL STEP BY STEP GUIDE

DISCLAIMER: I am not responsible nor liable for the loss of your game account(s) or money if you use this currency exchange exploit to buy cheaper Poké Coins, tickets, or boxes. Spending money on this game will not prevent a strike or ban if you break Niantic's Terms of Service. If you are concerned, worried, or afraid of losing your account, **DO NOT DO THIS**.

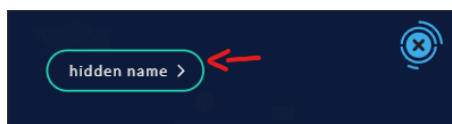

1. IPHONE STEPS (PHONE 1)

Step #1 [PRE-REQUISITE]: Before doing anything else, open your web browser on your phone, PC, or any other device, go to the official Pokémon GO Webstore, and **log out of your account completely** from every device possible.

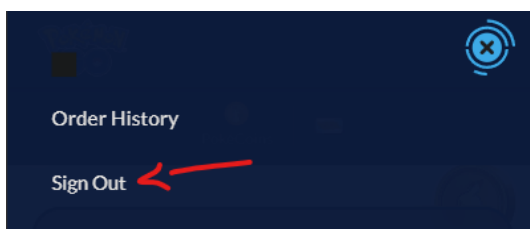

1. Click on this icon

2. Then click on your name

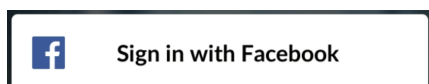

3. And last click on "Sing Out"

Step #2: Open the official Pokémon GO application downloaded from the Apple App Store on your iPhone or iPad.

Your account must be logged in through PTC (Pokemon Trainer Club), Google or Facebook according to the original method by TastyBanana. Personally, I always did the method with PTC so I recommend that option.

****I don't spoof on my iPhone I just use it as I bridge to lock the webstore to Indonesian currency****

Step #3: Go to the in-game Shop, scroll down to the Poké Coins section, and select the lowest coin pack available (100 Poké Coins for €1.09 / or your local currency equivalent).

Step #4: Complete the purchase using **Apple Pay**.

I have my card linked to Apple Pay and it's from a different country from Indonesia so there is no need to have a card from Indonesia to do the method.

I DON'T KNOW IF OTHER PAYMENT METHOD IS WORKING I ONLY TRIED WITH THAT ONE PAYMENT METHOD

Step #5 CRITICAL STEP: As soon as the coins are credited, close the Pokémon GO app completely. You must swipe up and force-close/kill the app task. Do **NOT** leave it running in the background.

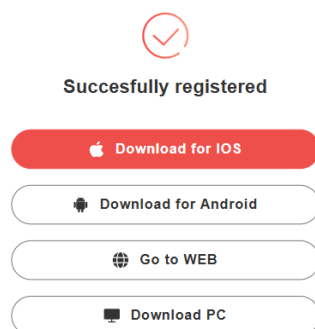

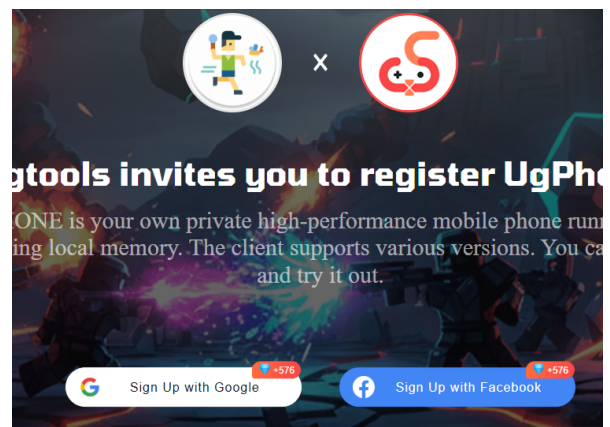

IPHONE STEPS ON VIDEO

 100 POKE COINS TUT.mp4

2. UGPHONE STEPS (PHONE 2)

Step #6: Open your web browser (PC is highly recommended for ease of use, it doesn't matter if you do it on your phone it's the same literal steps) and navigate to the **UGPhone website** using a valid sponsor/promotional link (such as the [PGTools referral link](#)) to ensure you get the free registration diamond bonus.

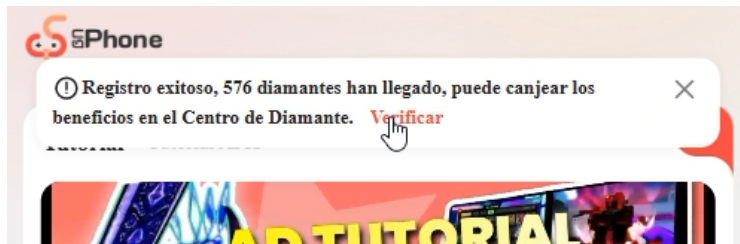

Step #7: Register a brand-new UGPhone account.
(Note: You must repeat this registration process with a new account every time you wish to perform a massive coin top-up to keep it free).

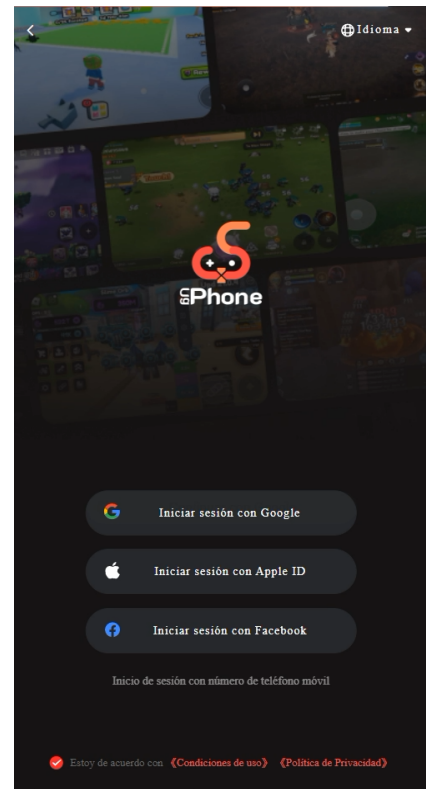

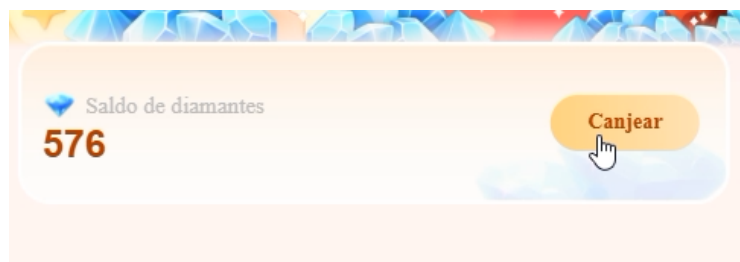

Step #8: Once you register a Google/Facebook account, click on the "Go to WEB".

Step #9: It will redirect you to the UGPhone's web, you will have to login again with **THE SAME GOOGLE/FACEBOOK ACCOUNT** that you registered before. ----->

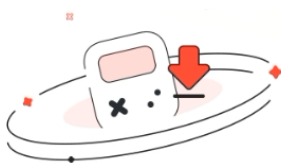

You will see a **popup** inside the UGPhone Web, you have to click on the red/orange text that says **“Verify”**.

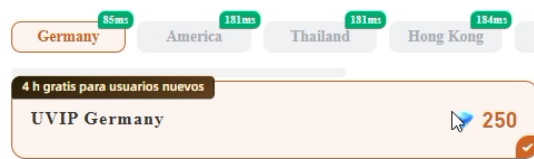

Once you click it, you just need to **click** on the **“Exchange”** button to claim the free diamonds.

Now click on the orange text that shows up and exchange the diamonds for a **4-hour free trial virtual device**.

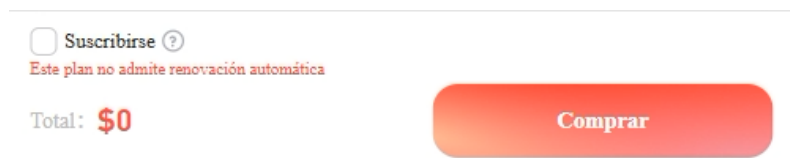

[No hay dispositivos todavía. Ir a comprar](#)

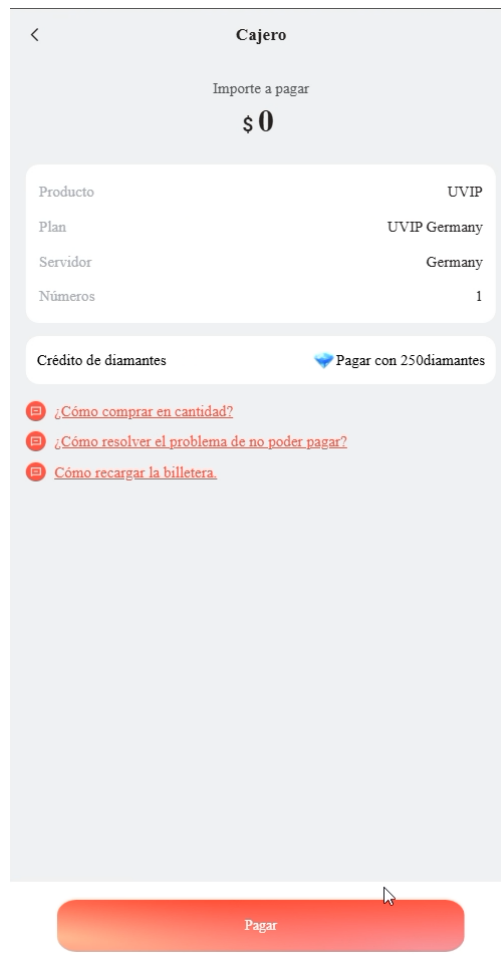

Select the server that suits the best for you.

DON'T click on subscribe checkbox since the free diamonds option won't appear if you do it and then when everything is selected click on **“Buy”**.

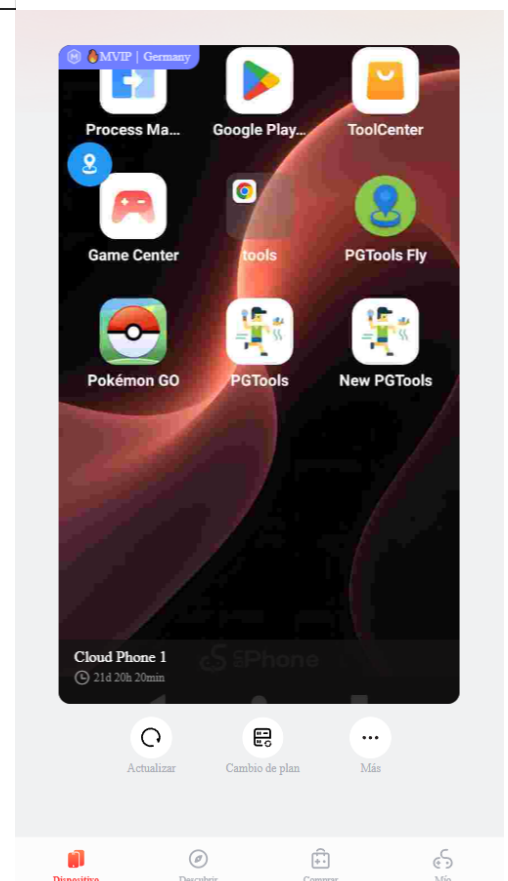

Step #10: It will take you to the checkout page, you just need to click on “**Buy**” again.

MAKE SURE YOU ARE BUYING WITH DIAMONDS, ON THE TOP OF THE CHECKOUT PAGE IT HAS TO SAY 0\$

Step #11: Go to “**Devices**” and wait for it to launch the cloud device, wait for the Android environment to fully boot up and then click/tap on it. It should look something like this:

****FROM THIS PART, IF YOU DID ALL OF THE STEPS CORRECTLY, YOU WILL HAVE A FUNCTIONING ANDROID ENVIRONMENT AND YOU ARE READY TO LOCK YOUR WEBSTORE TO INDONESIAN CURRENCY. NOW YOU MUST FOLLOW THE STEPS BELOW****

1. SAFER WAY

PGTOOLS (my case) or ANY OTHER SPOOFER/BOT WITH ROOT

To do it this way you must have a working spoofer/bot

2. UNROOTED PGSHARP WAY

All the steps shown below come directly from TastyBanana's original method. As far as I know, he is the original creator, so all credit goes to him. This is just a 'variant' aimed at those who want to apply the method but don't have an Android device at home like me.

[original reddit post](#)

[original google doc](#)

SAFEST WAY

Step 13: Inside the UGPhone emulator, set your location coordinates to match the cheap region (e.g., Jakarta, Indonesia) with your GPS Joystick or whatever you use. Open your spoofing tool (PGTools in my case) and start the service, once Pokemon GO is open to ensure your avatar spawns in that region ****AND WAIT FOR THE POKEMONS IN RANGE SPAWN** (DO NOT CATCH OR SPIN POKESTOP IT IS NOT NEEDED).**

Step 14: DO NOT CLOSE YOUR SPOOFER/BOT. Open the Google Chrome browser inside the UGPhone emulator.

Step 15: Go to the official **Pokémon GO Webstore** and log into your game account (**ONLY THROUGH "Pokemon Trainer Club", "Gmail" OR "Facebook"**). You will notice the prices are now displayed in the cheap regional currency (e.g., IDR).

Step 16: Select the coin bundle or ticket you want to buy and click proceed.

Step 17: Pay with PayPal and should be done. If you pay and get **"Error 3032"** or a generic payment failure. **Do not panic.**

ERROR FIX STEPS

Step 18: Leave the emulator running. Open a normal web browser on your **actual PC or iPhone** and go to the Pokémon GO Webstore.

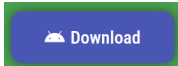

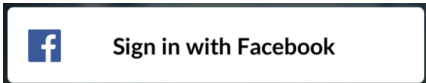

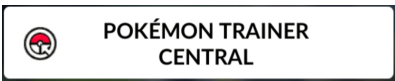

Step 19: Log in again. Because your cloud emulator is currently anchoring your account to Indonesia in the background, your PC/iPhone browser will **still show the cheap IDR prices.**

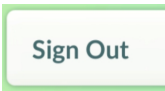

Step 20: CRITICAL STEP: Proceed to checkout on your PC/iPhone browser and select **PayPal** as your payment method.

UNROOTED PGSHARP WAY (TASTYBANANA'S METHOD)

Step #6	Install Pgsharp 1. Open your web browser app: Chrome, Internet (Samsung), FireFox, Opera, etc. 2. Go to https://www.pgsharp.com. 3. Press on . 4. Allow notifications for your web browser app in order to download. I am using Samsung's "Internet" (name of the browser app) on my Samsung Galaxy Tab S9+ WiFi only model. Exact specs: https://www.gsmarena.com/samsung_galaxy_tab_s9+-12440.php I am using the free version of Pgsharp. It is not going to make a difference if you use free or a paid key subscription.
Step #7	Go to your home screen or app screen and open your file manager app: "Files" or "My Files".
Step #8	Inside your Files app or My Files app, press on the "Downloads" folder. • Some devices this is easy to find while others you will have to find it by pressing on the "3 black lines" or "3 black dots" from the left side.
Step #9	Inside your Files app or My Files app, press on "pgs(arm64).apk" to install it. • Allow unknown apps to install. • May need to allow it through Google's Play Protect.
Step #10	Inside your Files app or My Files app, go back to the Downloads folder and press on "pgs(arm64).apk" again to install it.
Step #11	Open the Pgsharp app (same name as "Pokemon Go") and press on  then use , , or  to login.

	Current Location: New York, USA • Do not catch anything. • Do not spin any Pokestop. • Do not do anything except log in. Whichever account I used to buy the 100 coins with in Step #4, I must use that same account for the whole guide.
Step #12	While in Pgsharp, sign out of your game account. 1. Press on  2. Press on  3. Press on  at the bottom 4. Press on YES  Now, I have to sign out before doing the next step because Pgsharp changed their app so you must login before you can change your location. I prefer to do it this way because I do not know if Scopely is planning to update the Anti-Cheat Behavior System that Niantic failed to fully develop (explained in r/PoGoAndroid Spoofing Mega Guide 2026-2027) If you do not care about this, you can just teleport without signing out.
Step #13	While in Pgsharp, change your starting location.

1. Press on the  to get the drop down menu.

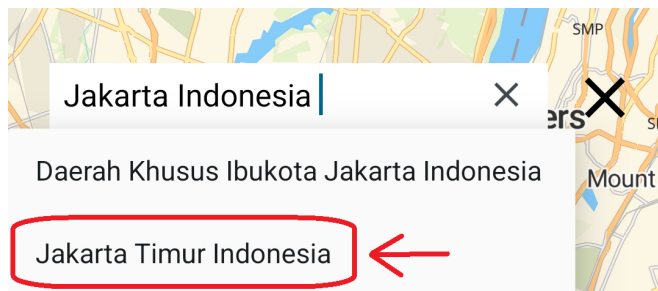

2. Press on  for the map.

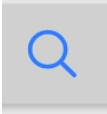

3. Press on  to search the location.

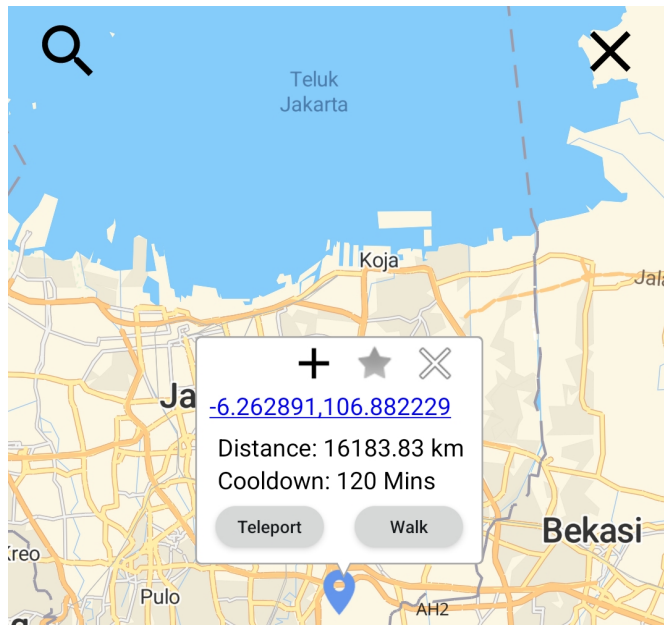

4. Type in “Jakarta Indonesia”

5. Press on “Jakarta Timur Indonesia”.

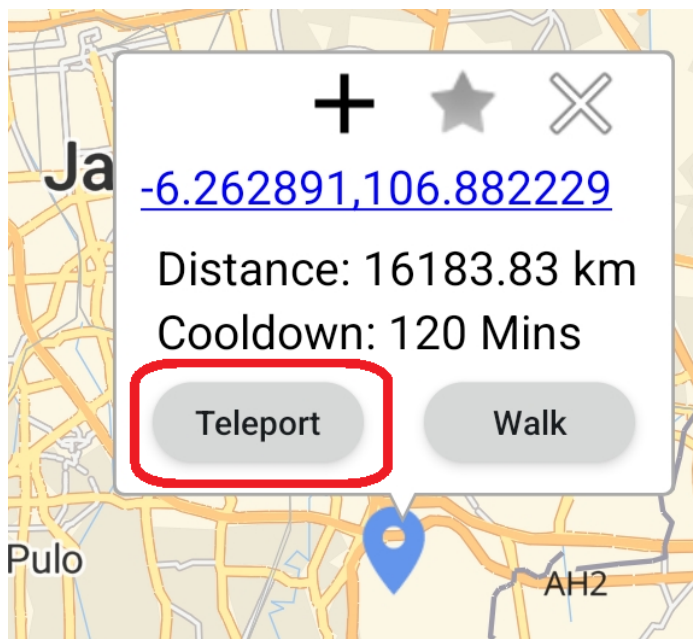

6. Press on Enter / Done /  (on the keyboard).

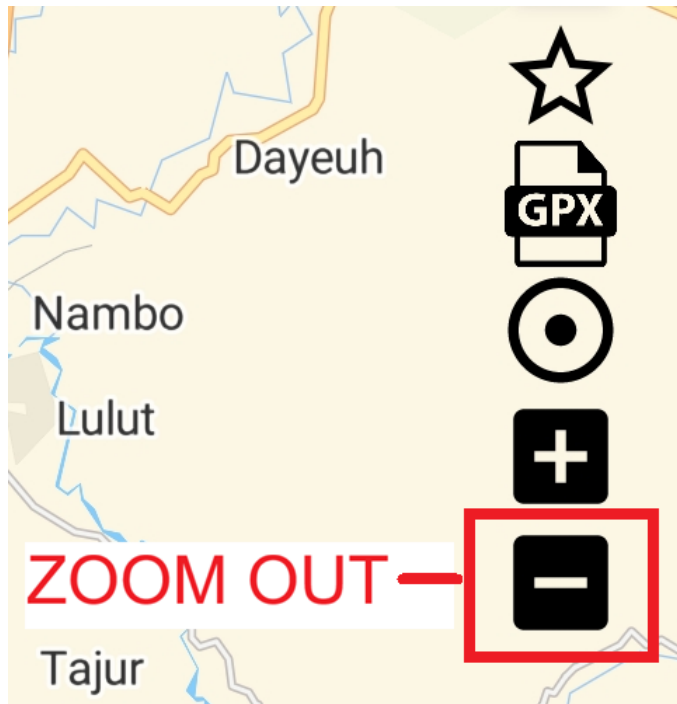

7. A box like this should appear.

8. Press on Teleport button

9. Press on the to zoom out to make sure you are in that country.

10. Now, Pgsharp's GPS/Location is in Indonesia.

11. Press on the  to close the map.

Step #13

While in Pgsharp, press on

RETURNING PLAYER

then use

	to login. If you have multiple Google accounts signed into your device, you will select open with External Chrome browser (best) or whatever is your internet browser app then you can select your account. YOU MUST USE THE SAME ACCOUNT YOU BOUGHT THE 100 COINS ON WHEN YOU USE THE POKEMON GO FROM THE GOOGLE PLAY STORE. Current Location: Jakarta, Indonesia As I mentioned in Step #4 and Step #11, I am using the same account.
Step #14	While in Pgsharp, wait for Pgsharp to load the Pokemon spawn around you and in the tracker to lock your GPS in the new location. Current Location: Jakarta, Indonesia • Do not catch anything. • Do not spin any Pokestop. • Do not do anything except log in.
Step #15	Open your internet browser app (no Incognito or no Private mode on). • These are examples: Google Chrome, Samsung Internet, FireFox, Dolphin, Opera, Microsoft Edge, etc.

- Do not use any apps with a forced incognito, private mode, VPN, or Proxy always enabled because you will have problems.

DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.

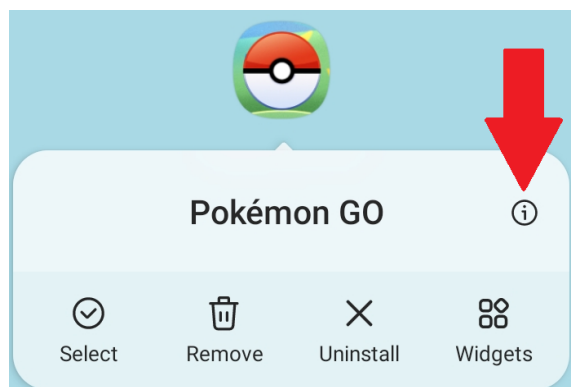

Since I am using a flagship tablet device with a Snapdragon 8 Gen 2 processor with 12 GB RAM, I am able to keep Pgsharp opened in the background while I do Step #16. I think the webstore needs to see if your game account's GPS is still in Indonesia while you are using the webstore.

A person suggested maybe people with a device that has a weak processor or not enough ram will cause Pgsharp to crash or close in the background when they switch to their web browser app.

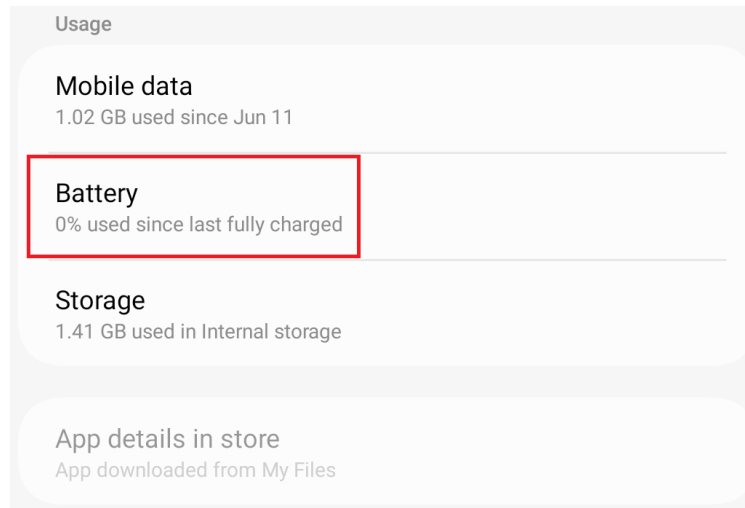

Maybe this can be fixed with your battery management system:

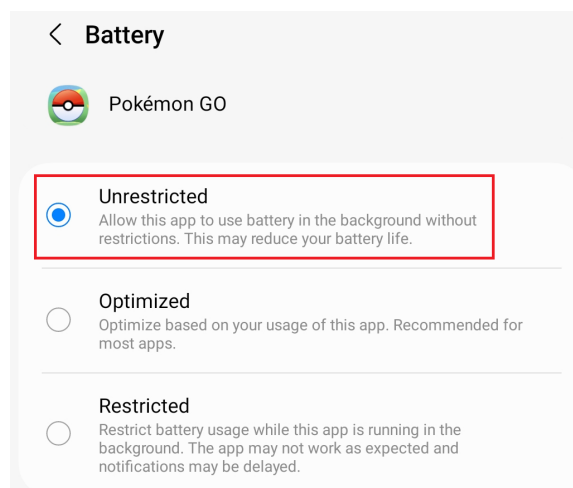

1. Press and hold down on  icon on your home screen or app screen to make the menu appear on top of the app.

2. Press on  in access to the app menu.

3. Press on Battery.

4. Press on Unrestricted.

5. Close this app setting.

You can also try to clear RAM or MEMORY.

1. Go to your device settings.
2. Look for RAM or Memory, you can also use the search.
3. You can clear all apps or select certain apps to remove.

This may or may not help you if you are using a device with 1 GB, 1.5 GB, 2 GB, or 3GB. Maybe it can help you if you have 4 GB RAM.

If you still have problems, maybe your device is too old or cannot handle Pgsharp running in the background.

Step #16

While in your web browser app, go to the Pokemon GO Webstore
<https://store.pokemongo.com>.

DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.

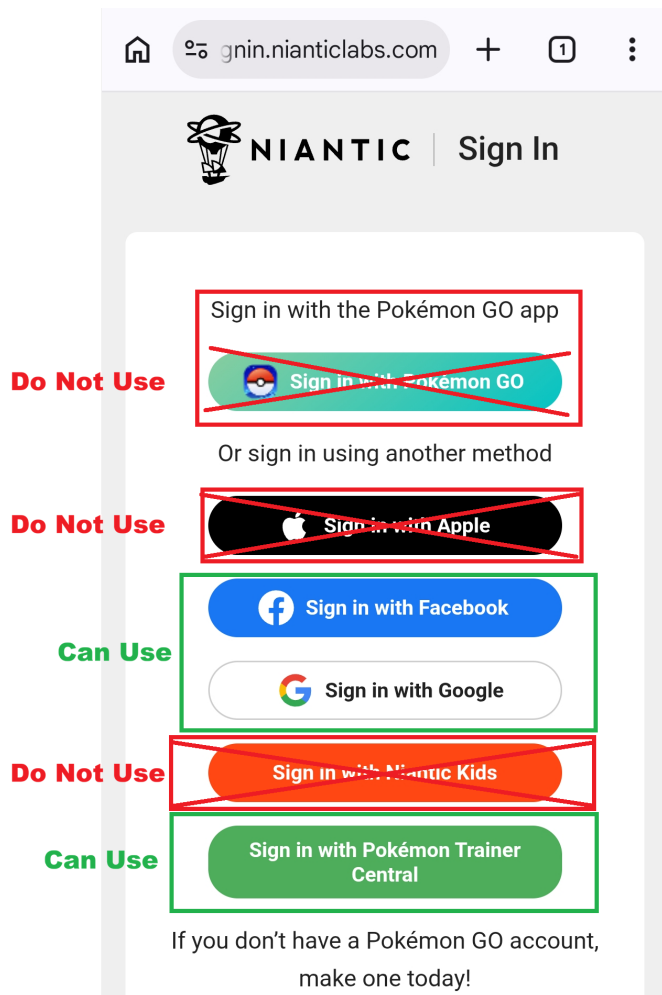

I am using Samsung's "Internet" (name of the browser app) on my Samsung Galaxy Tab S9+ WiFi only model. Exact specs:
https://www.gsmarena.com/samsung_galaxy_tab_s9+-12440.php

You can search for it or use it from a saved bookmark, it does not matter which one you do.

When I look at the webstore before signing in, all the prices are in my home currency, \$USDollars. This is normal.

When I do the next step, all the prices will change to Indonesian IDR.

Step #17

While in the Pokemon GO Webstore, press on the "Sign In" button to sign into Facebook, Google, or Pokemon Trainer Club for the Pokemon Go Webstore.

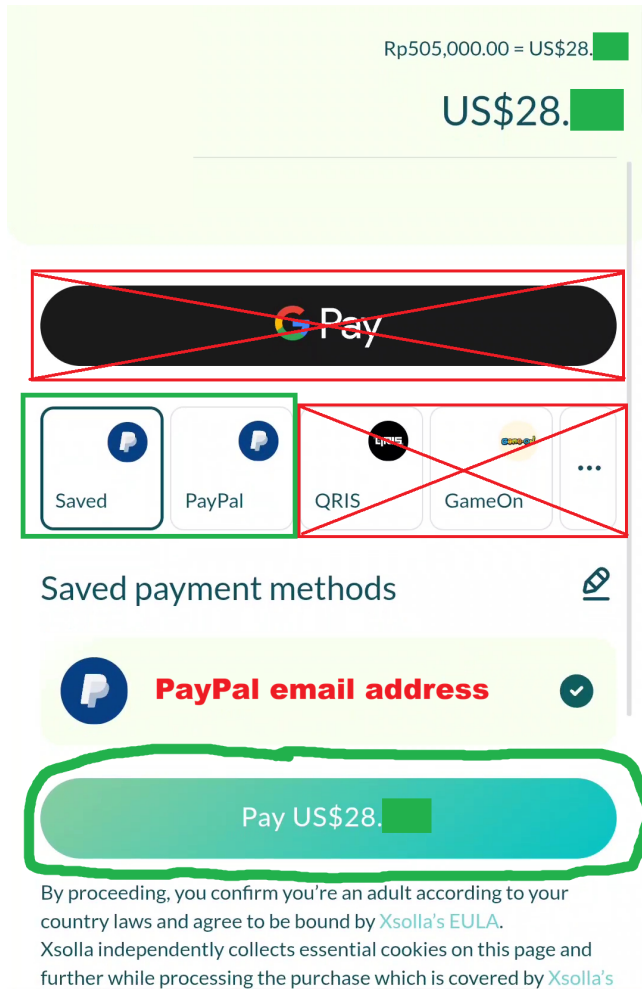

REMINDER, YOU MUST USE THE SAME ACCOUNT WHERE YOU BOUGHT

	THE 100 COINS! You must do Google's 2FA authentication to allow your account to sign in order to buy the coins, ticket, or box for your account. You will have to press "Yes, it was me." on the pop-up that asks if this is you from Indonesia then "Continue". • This is to verify with Google or whoever that it is you who is using the account. • If you press NO, you cannot log into the account and may be locked out. • The same thing applies for Facebook and Pokemon Trainer Club if they ask you. • You only have to do it 1 time then it will not ask you again. • If you have multiple devices, the pop-up may appear on your other devices if it does not appear on the device you are currently using. DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.
Step #18	While in the Pokemon GO Webstore, press on whatever you want to buy (it should be in IDR). DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.
Step #19	While in the Pokemon GO Webstore, press on "Proceed to Payment". DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.

	← Back to Store Trainer Name Level 99 Team Rocket  67 PokéCoins  15,500 PokéCoins IDR 505,000.00  +1,200 Reward Points (if eligible)  Proceed to Payment
Step #20	While in the Pokemon GO Webstore, choose the option to pay with PayPal and save the payment information to your account to make buying easier. • The original instructions said to use PayPal, so I am using PayPal. • I do not know what will happen if you pay with GPay, Debit/Credit Card, Crypto, ORIS, GameOn, or some other payment. • It is very important you use PayPal because I am using PayPal for this guide. DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background. I am using a debit card from my bank attached to my PayPal account. You can also pay with a credit card or bank account attached to your PayPal account. If you think the debit or credit card in PayPal is a problem, you can try your bank account. You will have to wait a few days before you can pay with your bank account because PayPal needs to verify that your bank account is legit and belongs to you. Read https://www.paypal.com/us/cshelp/article/how-do-i-confirm-my-bank-account-with-paypal-help185
Step #21	While in the Pokemon GO Webstore, press on the “Pay (converted currency

price)” button.

DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.

As I mentioned before, I am using PayPal because in the original guide they said to use PayPal.

Some people told me you can use the other payment options, but I am not going to confirm this because another person said you may be locked in your home currency for 90 days for just using another payment option. I do not know if this is true or not.

Step #22

While in the Pokemon GO Webstore, you will get a Payment Successful screen that looks something like this.

- I censored out some information to prevent Scopely from identifying me.
- I am paying in US Dollars. If you pay in a different currency, you will see

something else.

- The original price of this item is US\$99.99, and I was able to buy it for \$28.##.
- The same thing works for coins, boxes, and tickets inside the Pokemon Go Web Store but will not work for exclusive ticketed events.

DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.

 15,500 PokéCoins Rp505,000.00

Subtotal Rp505,000.00 = US\$28. 

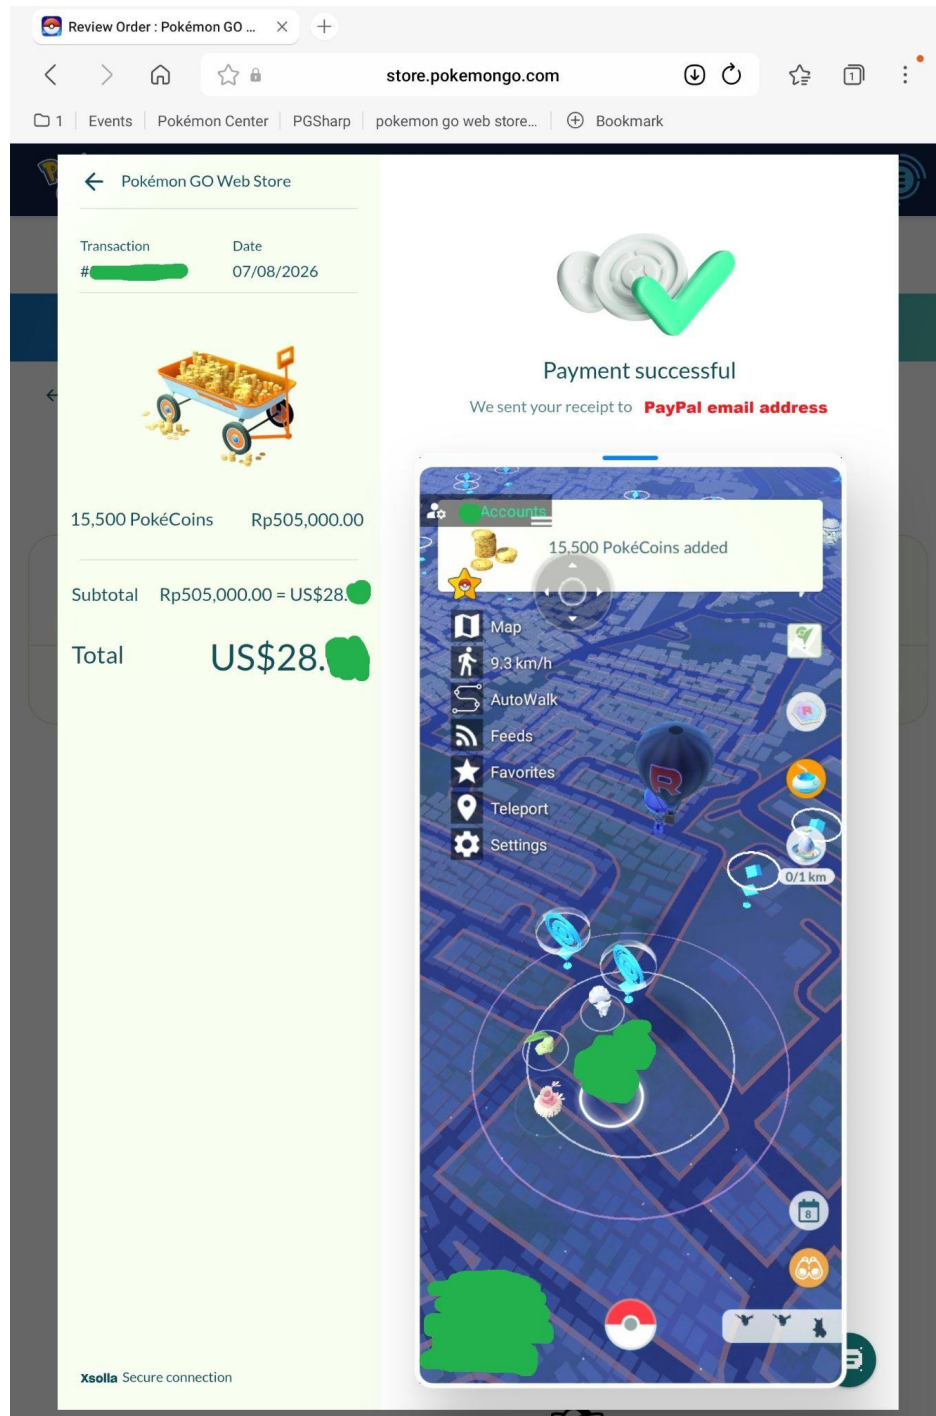

Total US\$28. 

Details ^

Payment successful

We sent your receipt to **PayPal email address**

Step #23

While in the Pokemon GO Webstore, press on  next to **Pokémon GO Web Store** to go back.

DO NOT CLOSE Pgsharp, it must be in **Jakarta, Indonesia** running in the background.

Step #24	While in the Pokemon GO Webstore, press on  then press on your Trainer Name to Sign Out, DO NOT CLOSE Pgsharp, it must be in Jakarta, Indonesia running in the background.
Step #25	Switch back to Pgsharp and whatever you bought should appear. • If it does not appear, check in the Journal for the action log or open the coin shop to your new amount of Poke Coins.
Step #26	Close Pgsharp when you are finished before repeating Step #1.

IN CASE THAT SOMEONE HAS ANY TYPE OF PROBLEM, YOU JUST HAVE TO FOLLOW THE INSTRUCTIONS STEP BY STEP, DON'T CHANGE ANYTHING, DON'T SKIP ANYTHING, IF IT DOESN'T WORK FOR YOU IT'S A USER'S PROBLEM NOT THE METHOD
