

1. Go to slides.google.com and create a new presentation.

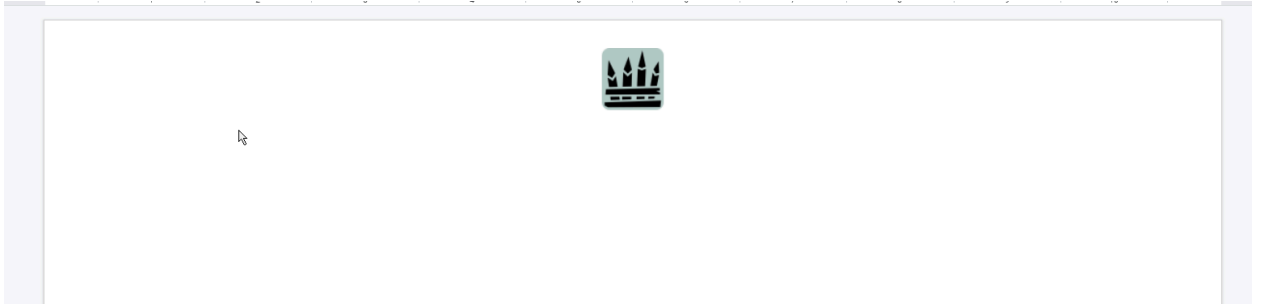

2. Under File -> Page Setup, set the ratio to “Custom” and the dimensions to 11 x 8.5 inches (or 29.7 x 21.0 cm if using A4 paper).

3. Copy and paste the front of your board onto the first slide. You may need to resize the image.
4. Create a new slide, then paste the back of the board on the second slide.
5. Create a third slide. Paste one of your tokens or buildings at the center top of the board, leaving some room for the edge of the paper. You may need to resize it

(about 18 to 20 mm per piece).

6. Copy the piece two more times, place them side by side, and then delete the middle one. This creates a nice, equal distance between each piece.

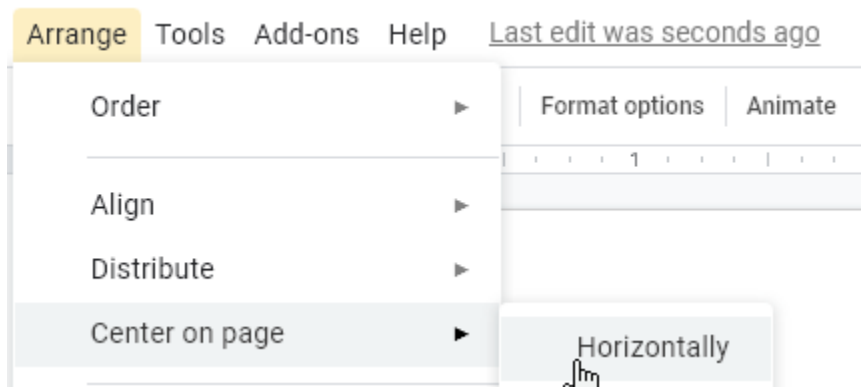

7. Continue to copy your pieces. Google Slides will help you distance the pieces to the proper amount.

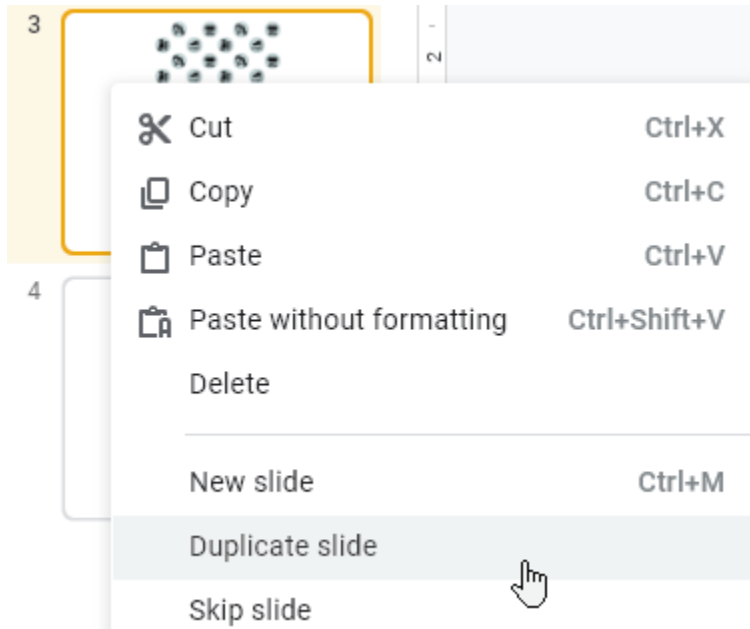

8. When you need to make a new row of pieces, make sure to alternate the spaces to make sure there's proper distance for easy cutout.

8. When you're finally done placing all your pieces, select all of them, go under Arrange -> Center on Page, and click on Horizontally.

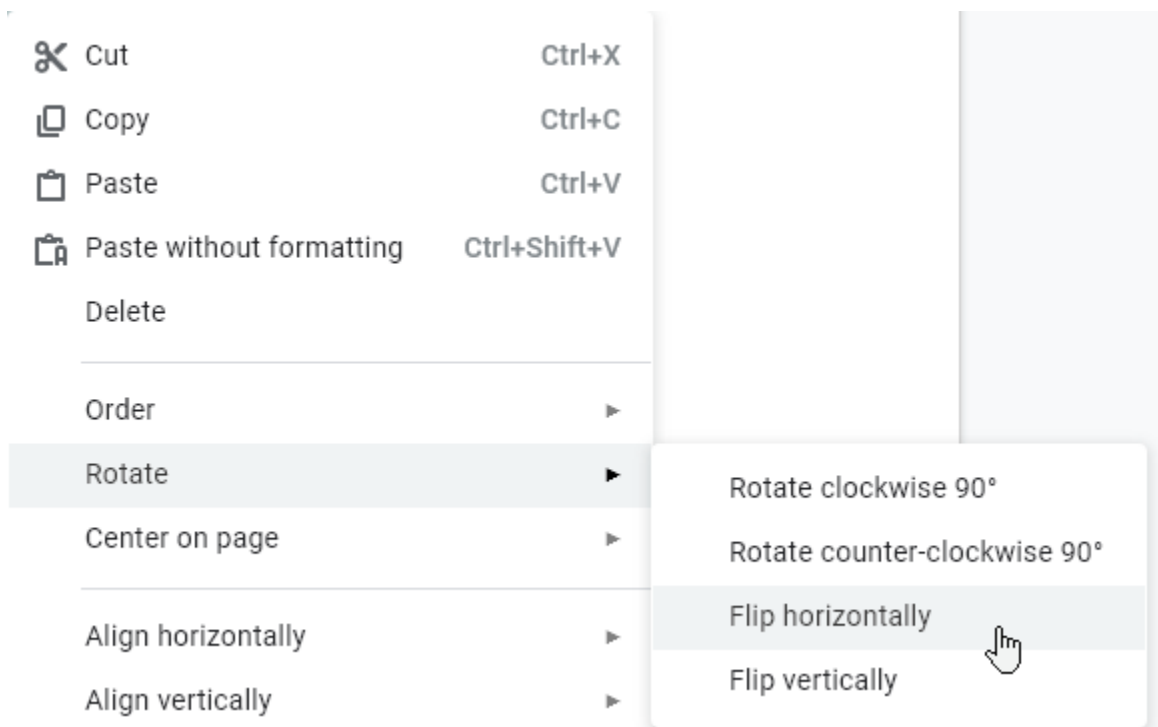

9. Right click the third slide and click on Duplicate Slide.

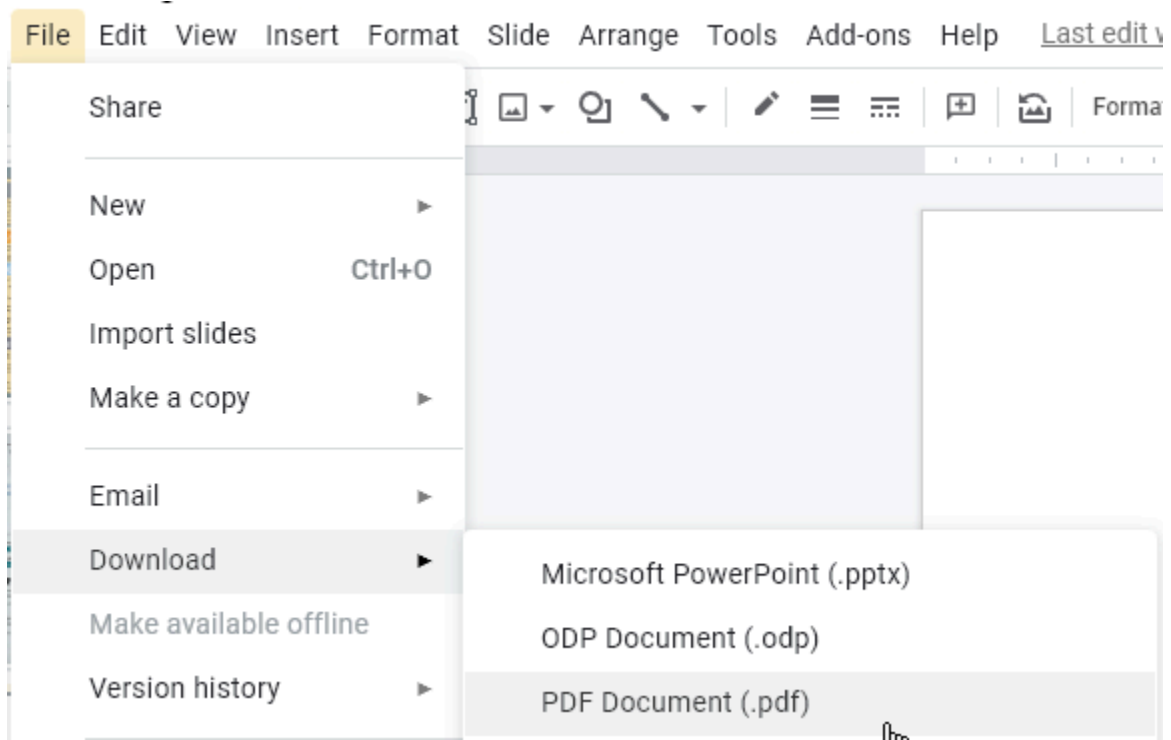

10. Select all the pieces, right click them, and click on Rotate -> Flip Horizontally.

This will make sure the tokens have a backside. If your buildings or tokens are double sided, make sure to replace the old sides where needed.

11. Select File -> Download -> PDF Document to save your faction for easy printout.

If you wish to add your Law of Root page to this pdf, you can use

<https://www.adobe.com/acrobat/online/merge-pdf.html> to merge the two together.
