

Who is the "typical" Excel student?

Although each student has unique needs and circumstances, the successful Excel student is committed to their goal of graduation and personal growth within a non-traditional high school setting. The student may have credit deficiencies not solved through intervention at the high school (Academic Support or Credit Recovery). Alternatively, the student may be ahead and have a clear plan and desire to graduate earlier than their cohort. There may be a work situation that requires school day flexibility. Or, the student may have personal issues that interfere with the demands of a traditional high school environment. In any case, the successful Excel student is committed to working with Excel teachers to reach their personal academic goals.
