

THE PRESERVER

The aim of the game

Connect the forest creatures into a coherent network and see how the balance is achieved.

How the game works

Find the location of the trees and bushes in the opposite drawer by their trunks. Attach them to the edge using the magnets and then connect them together to form a network.

Not all the plants shown can be included in the system. Do you have any idea why not?

Notice which species of animals have been given habitat in the network!

Create a network of forest plants and maintain the natural balance.
