

Peer Review - Make a Recommendation

Pre-Review

Creator's Name: Student #1

One thing I want feedback on is... How can I improve my end results

Evidence I Found	Types of Evidence	Ideas for More
I see a problem trying to be solved in deciding a trip for someone	The problem is well-defined, including a question that the recommender will answer. Steps of the process clearly relate back to the problem.	Could elaborate on why this is a problem.
One conclusion for each data collecting question is found which is useful	The data is analyzed using the cross tabulation tables, and at least five relevant conclusions are drawn from each relationship between the types of data.	More conclusions can be drawn from the survey and results that I think would be helpful in determining results.
Rules are found for what should happen for each answer	The algorithm includes at least five rules that clearly relate back to the results and conclusions drawn from the cross tabulation tables.	The rules don't necessarily follow the conclusions, and I think having more conclusions will help your rules.
Four questions are asked to help collect data to be able to analyze to make conclusions for results	At least four types of data to be collected are clearly identified, a survey is designed to collect the needed data, and choices around the data collection process are explained in the presentation.	Unsure how some of the questions help determine the end result for the recommender.
See two user tests in which someone hit a tie which is helpful to know about.	The algorithm is tested at least three times, and any feedback from the users is taken into consideration, with an explanation of why it should or should not result in changes to the algorithm.	Test it at least one more time just to check if there any other small bugs like other ties that need fixing

Free Response Feedback

I like... the questions asked. I think that they are really fun so people will like taking the quiz.

I wish... there were more conclusions drawn about the data. I think that could help you with your rules that are determining the end result.

What if... you went back to your tables to try and find more conclusions and then change your rules based on what new things you found.

Creator's Reflection

1. What piece of feedback was most helpful to you? Why?

Being told to go back to my data was helpful. I think to be able to have more conclusions would improve my rules that I have set place to have my results be more accurate for my data.

2. What piece of feedback surprised you the most? Why?

I didn't think that I needed more tests. I already found a pretty big bug with the ties and I fixed that so I didn't think I would need to check for anything else.

3. Based on feedback, what changes will you make to your app proposal?

I am going to draw more conclusions based on my data and change my rules. Then once I have done that, I will ask more people to test it out to make sure it works how I want it to.
