

Spec LTC Asaph-io API

Our Small SaaS is dev in Ruby on Rails, we didn't developed it ourselves. But we have documentation and code (please provide your gitlab address).

Expected responses are JSON integrating data from our DB of lyrics.
cf doc.

Doc:

[Slack](#)

[API Documentation](#)

[Github](#)

[Code](#)

login: contact@ltcasaph.fr

pwd: rQjY4Cnh4tU985c

Issue:

- 1) We have a authentication issue with our API. We can no longer connect to the API even as Admin.

Authentication by password send this :

```
{
  "error": "invalid_client",
  "error_description": "translation missing: fr.doorkeeper.errors.messages.invalid_client"
}
```

- 2) Authentification with OAuth2 ask to register on this page
<https://db.ltc-asaph.com/oauth/applications> but access is forbidden

Expected result:

API should work /

Call on API should work (currently) it doesn't. We should be able to connect through Oauth 2.

[Example our client webasph](#) (that you can install here) should enable connection (login)
Currently even if we do a proper login it's not connecting.

You should be able to install the code, run it, then solve the problem, publish, merge and deploy.

For the merge and deploy we'll help you.
