

Strategic Partnerships

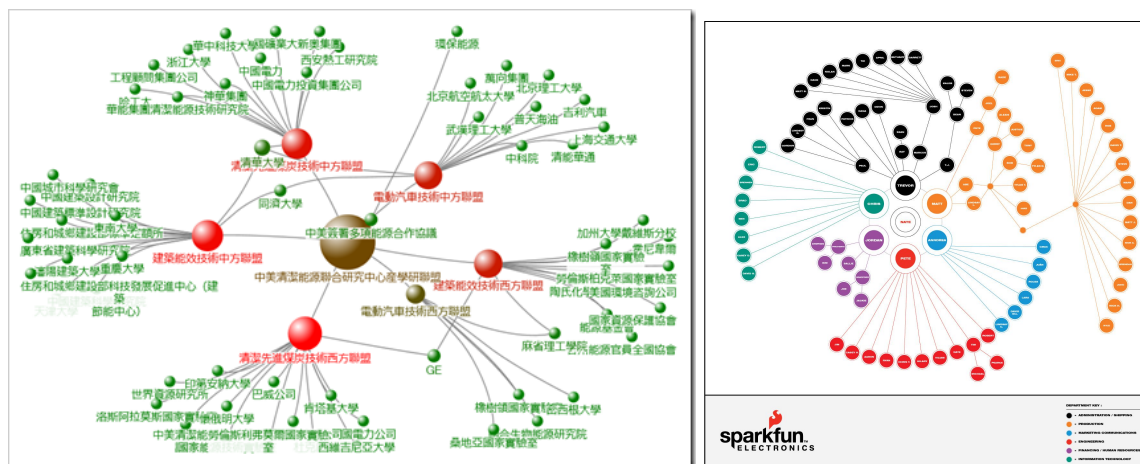

Focus around datasets

- Determine owners of datasets of interest
- Owners attach tags to categorize datasets

VVVVVV

People search via tags, and discover the datasets and orgs associated to those tags

1. Starting with Dataset
 - a. 100 Year Flood Plain
2. Tags associated with dataset
 - a. Franklinton area, corporate development, landuse, natural disaster, impact on food flow

Rating system for each dataset. Visualization is built off of that rating system

Something like this:

(<https://metro.co.uk/2015/01/28/new-radar-style-search-engine-is-better-than-google-5039438/>)

Dataset #1 → Provider #1
Provider #2?

DEMOCRATIC
TAGS

e.g. 100 Year Flood Plain
(random dataset picked
as an example)

⇒ What does the dataset
serve to?

⇒ What activity can benefit
from this dataset?

⇒ Who can benefit from this?

Development
Land-use
Urban Planning
Urban History
Disasters
Agriculture
Food Flow...

NEXT STAGE.

Next Stage:

- Visualization/Mapping Relationship
- Rating the relationships
- Individual Protocols for non-profit clients/end user
