

Danielle A. (Davis) Canty, Esq. is an attorney, tech policy expert, and digital educator working to make complex technology policy issues accessible to the communities most impacted by them. She serves as Director of Technology Policy at the Joint Center for Political and Economic Studies, where she leads national research and advocacy on broadband access and affordability, Section 230, privacy, and AI.

Her work sits at the intersection of technology, law, and culture—examining how Section 230 shapes online speech, how generative AI is governed, and where accountability enters modern technology regulation. Danielle hosts *The Miseducation of Technology*, a podcast that explores how artificial intelligence, social media platforms, and digital infrastructure are not merely flawed, but built within historical inequities that continue to shape opportunity, visibility, and access. Through this work, she equips listeners with the tools needed to navigate the digital age.

Most recently, Danielle was named an AI Policy Influencer by the Brookings Institution. She served as a Tech & Public Policy Visiting Fellow at Georgetown University's McCourt School and was selected for the inaugural cohort of Harvard Law School's executive education program, *AI and the Law: Navigating the New Legal Landscape*. Her analysis has been featured in Essence and Tech Policy Press, and she has spoken at national convenings including the State of the Net Conference, TPRC, The National Black Caucus of State Legislators Conference, and CBC Annual Legislative Conference. Across her work, Danielle is committed to ensuring Black communities are not only protected from digital harm, but positioned to lead in the digital future.
