 <p>Article History: Received on Sep 18, 2026 Revised on Oct 1, 2026 Accepted on Nov 20, 2026</p>	Abstract(12pt) Purpose: A well-prepared abstract enables the reader to identify the basic content of a document quickly and accurately, to determine its relevance to their interests, and thus to decide whether to read the document in its entirety. Methodology: The Abstract should be informative and completely self-explanatory, provide a clear statement of the problem, the proposed approach or solution, and point out major findings and conclusions. Results: The Abstract should be 100 to 200 words in length. The abstract should be written in the past tense. Standard nomenclature should be used and abbreviations should be avoided. Limitations: No literature should be cited. Contributions: The keyword list provides the opportunity to add keywords, used by the indexing and abstracting services, in addition to those already present in the title. Judicious use of keywords may increase the ease with which interested parties can locate our article (11 pt).
	Keywords: <i>first keyword, second keyword, third keyword, fourth keyword, fifth keyword</i>
	How to Cite: First Author, Second Author, and Third Author (last name then first name, example: if its name is Jhon Lennon, so it should be Lennon, J. (2026). The entitled of the paper, with Capitalized Each Word, example; The Influence of Humanistic Leadership. <i>Journal of Sangkil dan Mangkus (JSDM)</i> , 1(2).

1. INTRODUCTION

The main text format consists of a flat left-right columns on A4 paper. The margin text from the left and top are 2.5cm, right and bottom are 2 cm. The manuscript is written in Microsoft Word (in .doc or .docx, both acceptable), single space, Time New Roman 11pt and maximum 5 pages, which can be downloaded at the website: <https://journal.darmajaya.ac.id/index.php/JSDM/TemplateJournal>.

The paper can be written in American English or British English, but not mixed-up between both languages. The terms in foreign languages are written italic. The text should be divided into sections, each with a separate heading and numbered consecutively. The section/subsection headings should be typed on a separate line. Authors are suggested to present their articles in the section structure: **Introduction – Research Method – Methodology - Results and Discussions – Conclusion.**

A title of article should be the fewest possible words that accurately describe the content of the paper. Omit all waste words such as "*A study of ...*", "*Investigations of ...*", "*Implementation of ...*", "*Observations on ...*", "*Effect of....*", "*Analysis of ...*", "*Design of...*" etc. Indexing and abstracting services depend on the accuracy of the title, extracting from it keywords useful in cross-referencing and computer searching. An improperly titled paper may never reach the audience for which it was intended, so be specific.

The Introduction should provide a clear background, a clear statement of the problem, the relevant literature on the subject, the proposed approach or solution, and the new value of research which it is innovation. It should be understandable to colleagues from a broad range of scientific disciplines. Literature review should be put in "Introduction" section shortly and concisely to explain the difference ("gap") of the manuscript with other papers. The "(Proposed) Methodology" should describe the step of research and justification of how to get the data correctly, while the "Results and Discussion" section is the place to explain results in depth and to elaborate the meaning of results. Please put your research in context, therefore always try to link your findings with previous works or published results of other researchers. Additional section is allowed as long as the main section structure is intact.

2. RESEARCH METHOD

In this section, you should explain how the research was conducted, including research design, research procedure (in the form of algorithms, Pseudocode or other), how to acquire the data and how to perform any test. The description of the course of research should be supported by references, so the explanation can be accepted scientifically.

2.1. Subsection 1

This is how to start a subsection. The paragraph is indented 0.5 inch, justified, single column. The paragraph should consist of more than a sentence.

This is a new paragraph. It does not need additional space between paragraphs (before or after) in same subsection. Additional space is required for new section or subsection.

2.2. Subsection 2

This is how to start another subsection

3. RESULTS AND DISCUSSION

In this section, the results of research are explained and at the same time is given the comprehensive discussion. Results can be presented in figures, graphs, tables and others that make the reader understand easily. The discussion can be made in several sub-chapters. It is strongly suggested that comparison with results from other published articles are provided to give more context and to strengthen the claim of novelty.

3.1. Figures and Tables

Tables and Figures are presented in center as shown below. It is important that all tables and figures are cited in the manuscript. Table 1 shows something, and the caption should be put above the table. On the other hand, Figure 1 shows something else, and the caption should be put below the image/figure.

Table 1. The performance of ..

Variable	Speed (rpm)	Power (kW)
x	10	8.6
y	15	12.4
z	20	15.3

Figure 1. Effects of selecting different switching under dynamic condition

3.2. Equations

Equations should be written using native MS Word Equation or MathType. Do not use image for any equation, as the quality will be degraded during the production of pdf version. The equation should be numbered consecutively. The number is put in the right side. Do not forget to explain any variables or parameters in the first use, especially under the equation. The sample of equation is as follow:

$$e(x) = x_{ref} - x \quad (1)$$

Where $e(x)$ is error, x_{ref} is reference position and x is actual position.

3.3. Bibliography and citation in text

Organization and citation of the bibliography should use IEEE style in numbers, just like [1, 2] or [3-7]. The use of any reference manager tools (e.g. EndNote, Mendeley etc), is allowed. Each citation should be written in the order of appearance in the text. The reference style should follow the template, as shown in the Reference section at the end of this file. The main references are international journals and proceeding. All references should be to the most pertinent and up-to-date sources. All references should appear in the text. Avoid unreliable internet website (Wikipedia/blogs/news) as reference at all. Please use a consistent format for references.

4. CONCLUSION

Provide a statement that what is expected as stated in the "Introduction" chapter can ultimately result in "Results and Discussion" chapter, so there is compatibility. Moreover, the authors can elaborate the prospect of the development of research results and inspire further studies (based on result and discussion).

ACKNOWLEDGMENTS

You may want to thank your funding source (but do not thank to any of the authors!).
