

Practise email copy session

This email is targeted towards Coders and "Laravel coders"

The tool promoted here is a SaaS built to help coders test their code without having to go through the manual hassle.

And this tool which is promoted here is a tool which saves people from doing it manually and does it automatically.

Subject Line - Manual deployment sucked so I did this...

Hey, it's Larry here coming in on a Saturday.

As I was going about my Saturday and doing my usual routine: spending time with my child, planning for the week ahead, and squeezing in a coding session, something hit me.

I suddenly remembered the early days of Laravel...

The days when deploying applications and setting up environments to preview changes before merging them into the main codebase, it was like waiting for a headache to strike.

I'm sure we all dreaded deployment time.

Not to mention the amount of time it took to do something so simple, I know you must be asking yourself:

"What is Larry on about? There are still many of us who go through this."

Well, to be honest, a lot has changed in the past 7 years, and one of those changes addresses this exact problem you face.

...and this is the exact reason I built Glimpse. As a Laravel developer who relies on GitHub, I realized there was an opportunity to leverage Laravel Forge and automate the deployment of pull requests to live preview environments.

Sounds too good to be true, right? But it's as real as it gets!

Have a look at what Glimpse users have to say

(Testimonials would go here)

For \$0 today, you can experience the benefits of seamless deployment and faster feedback.
