ABSTRACT*[10 pt]*

The abstract is written in one paragraph using English in Times New Roman font, size 10 pt, italic, single-spaced. The abstract is written in a concise manner by containing the background, research objectives, methods, results/findings, conclusions, and policy implications/recommendations. The abstract does not require citations (citation references) and formulas and is no more than 250 words in total. The abstract ends with a minimum of 3 related keywords and a maximum of 5 words/phrases.

[Single-spaced, 10 pt]

Keywords: between 3 - 5 words (phrases) written alphabetically, capitalized at the beginning, separated by commas (,), and should not repeat words in the title for indexing purposes. *[10 pt]*

[Single-spaced, 10 pt]

GENERAL CONDITIONS

This writing guideline is made for the uniformity of writing format and convenience for authors in publishing manuscripts in Tarjih: Agribusiness Development Journal (TADJ). Authors can use the English language while still paying attention to the suitability of the applicable EYD, and standard English grammar. The manuscript is written in ***Times New Roman font*** *and in A4 size paper format (210 mm x 297 mm) with a left margin of 3 cm, top, bottom, and right borders of 2.5 cm each. The format of the manuscript is 1 (one) column* ***(follow this template to make it easier to follow the writing format of the TADJ journal).***

INTRODUCTION *[10pt, bold,]*

The introduction includes the background, relevance of the research to the theoretical studies (State of the Art) and previous scientific findings, problem formulation, research objectives, and hypotheses (if any). **The formulation of the problem, research objectives, novelty, State of the Art, and previous scientific findings** are written in the introduction, there is no need to write them in separate sub-chapters. Foreign terms are written in italics. Abbreviations must be written in full when mentioned for the first time, after which the shortened word can be written.

Examples of writing citations or quotations in article manuscripts (Hadi and Wijaya, 2015);
(Hadi, Sutiarso, Prayuginingsih, Santosa, Prawitasari, and Wijayanti, 2017). In subsequent quotations or citations simply write (Hadi *et al,* 2017).
(*United States Department of Agriculture*, 2012); (Gudjarati, 2007); dan Krisnamurti dan Wibowo (2015) on Hadi (2017). If there is an example of this last citation, then the Bibliography should read Hadi (2017) there is no need to write Krisnamurti and Wibowo (2015). Citation writing in accordance with *American Psychological Association 6th Edition*.

RESEARCH METHODS [*10pt, bold,*]

The research methods used must be written in accordance with scientific methods, namely rational, empirical, and systematic. The type and method of research, time and place of research, sampling and data collection techniques, and data analysis should be clearly described including the formulation of hypotheses and decision criteria. If there is an analytical tool used that is not common or more specific including the calculation formulation, it should be described clearly and systematically. An example of the presentation of the formula and the description of the formula can be seen below:

$$\mathbf{Y = \beta_0 + b_1X_1 + b_2X_2 + ... b_nX_n + \varepsilon} \quad \textbf{(1)}$$

Where **Y** is Entrepreneurial Intention, **β0** is a constant, **b1, b2** are regression coefficients, **X1** is the need for achievement, **X2** is self-efficacy and ε is the error term.

If there is a mathematical equation, it is placed symmetrically in the column. The equation number is placed on the far right in parentheses, and the numbering is done sequentially. If there is a series of equations that are more than one line, then the number is placed on the last line. The equations in the manuscript are shown in abbreviated form, such as Press. (1).

[Single-spaced, 10 pt]

$$x^2 = \sum_{1}^{\infty} \frac{(fo-fh)^2}{fh} \quad \text{..... (2)}$$

where:
X^2 = Chi-Square value
fo = observation frequency
fh = hope frequency

[Single-spaced, 10 pt]

Symbols are written clearly and consistently. The derivation of mathematical equations does not need to be written in detail, only the most important part, the method used and the final result.

[One and a half spaces, 10 pt]

RESULT AND DISCUSSION [*10pt, bold,*]

Results and discussion contain the results of data analysis and in-depth discussion of the phenomena that occur at the research location relevant to the theme of the study. The results of the research should be compared with theories and or previous research findings relevant to the study. Results and discussion can contain data presented in tables and/or figures as well as a description of the discussion or review of the results of data analysis. Tables and figures are numbered sequentially with Arabic numerals and given a title. Tables are displayed without vertical lines, while horizontal lines are only displayed 3 to 4 main horizontal lines, namely 2 horizontal lines for column title items 1 closing line for the bottom row, and/or 1 line before the bottom (if needed). The font size for table contents is a maximum 10 pt without bold. The distance between the table title and the previous sentence is 1 space, between the table title and the table is ½ space, and between the table and the next sentence is 1 space. If the table has many or long columns, a one-column or full-page format can be used. Examples of table and figure presentations are as follows:

Table 1. Development of Productivity Value of Soybean Commodity in Indonesia in 2010-2016

No	Years	Productivity (Ton/Ha)
1	2010	1,29
2	2011	1,32
3	2012	1,35
4	2013	1,25
5	2014	1,38
Average		1,29

Source: Seconder Data processed, 2017. [TNR_10pt]

[One and a half spaces, 10 pt]

Tables/figures are placed immediately after they are mentioned in the manuscript, tables/figures are placed at the top or bottom of each page and must not be enclosed in sentences. The size of the image is adjusted to the size of the column. If the image is large enough, a one-column format can be used. Figure numbering uses

Arabic numerals. There is a space of 1 space between the picture and the title of the picture. Figure captions can be presented with the title of the figure. The font size for the figure caption is 9 pt, while the figure title is 11 pt. Images that have been published by other authors must be mentioned in the caption.

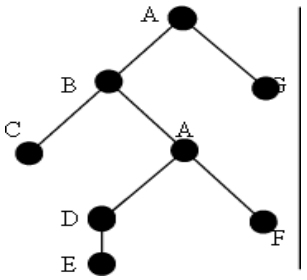

Figure 3. Title of Figure [9pt regular font] (Source: , Year) *[9pt regular font]*
[One and a half spaces, 10 pt]

CONCLUSION *[10pt, bold, left]*

Contains conclusions formed in one paragraph (not in the form of bullet points). The conclusion should be an answer **to the research question**, and **not expressed in statistical terms**. Written in one paragraph in essay form, **not in numerical form**. If it is necessary to write **limitations and suggestions/recommendations**, they can be written in this one paragraph.

ACKNOWLEDGEMENT [*10pt, bold, left*]

Acknowledgments are only written if it is considered important to write such as related to funding sources (with contract number, if any), data access and mentoring. other parties who help the completion of paper writing.

[One and a half spaces, 10 pt]

REFERENCES [*10pt, bold,*]

Literature citations in the text must be in the Bibliography and are arranged alphabetically in the order of the author's name (family), year, essay title, magazine name, publisher and page. In the Bibliography, all authors' names must be written in full and et al is not allowed. The Bibliography should not include literature that is not cited in the text. **The proportion of primary reference sources is expected to be more (>80%) than other reference sources.** Primary reference sources are reference sources that directly refer to certain scientific fields, according to the research topic and have been tested. Primary reference sources can be in the form of: writings in scientific papers in accredited international or national journals, research results in dissertations, theses, and theses. Books (textbooks) are included in secondary reference sources. **The number of reference sources in one writing is at least fifteen (15) with a minimum period of the last 10 years, especially research journals except for textbooks. The format of writing the Bibliography uses the Mendeley, EndNote, or Zotero** reference application or **the American Psychological Association (APA)** writing style and must include **the DOI/URL** of the article which is available in the online version as shown below.
