ABSTRACT

Write the abstract as a single paragraph of 100–250 words that covers (1) the background or problem, (2) the objective of the study, (3) the method, including design, data, and analysis, (4) the main findings, preferably with key quantitative results, and (5) the conclusion or significance, including the novelty of the study. The abstract must be self-contained: do not cite references, tables, or figures, and define abbreviations at first use. The abstract entered in OJS must be identical to the abstract in the manuscript. Use 3–5 keywords separated by semicolons; they must also be identical to those entered in OJS. This placeholder text is intentionally written to show the approximate length of an abstract within the recommended range, so that authors can judge how much space the abstract will occupy on the first page of the published article. **(10 PT/Times New Roman, Spasi 1)**

How to cite: Tiqniati, K., Bahriatun, Bihuria, M., & Bahriun, R. (2026). Concise, specific, and informative article title in English of no more than 15 words. *Jurnal Venus*, 14(1), 1–10. <https://doi.org/10.48192/vns.v14i1.xxx>

1. INTRODUCTION (12 PT/TIMES NEW ROMAN)

Background and significance. Open with the research problem in its maritime context (e.g., navigation safety, port operations, maritime education and training, marine engineering, or maritime law and management) and explain why it matters, both academically and practically, at the national and international levels. Support key claims with credible evidence; for example, human factors remain a dominant contributor to shipping accidents (Hetherington et al., 2006), and the severity of marine accidents is shaped by interacting vessel, environmental, and operational factors (Wang et al., 2021).

Recent literature and research gap. Critically review the most relevant previous studies, prioritizing peer-reviewed journal articles from the last five years, and compare national and international findings. Show what is already known, where findings disagree,

and what remains unanswered (Kim et al., 2021; Sharma & Kim, 2022). End this part with an explicit statement of the research gap, for example: “However, no study has yet examined ... in the context of”

Novelty and objective. State clearly what is new in this study (its theoretical, methodological, contextual, or practical contribution) and how it differs from previous work. The last sentence of the Introduction must state the research objective or research questions clearly and specifically, for example: “This study aims to” Manuscripts that are purely descriptive internship, on-the-job training, or operational reports without a research gap, novelty, or analytical contribution will be rejected at the desk review stage. **(12 PT/Times New Roman, Spasi 1,5)**

2. METHODS (12 PT/TIMES NEW ROMAN)

Describe the methods in enough detail for the study to be replicated, preferably in this order: (1) research design and approach (quantitative, qualitative, mixed methods, experimental, or simulation); (2) research setting and time (e.g., the ship, port, or training institution and the data collection period); (3) population, sample, or informants and the sampling technique, with a justification of the sample size; (4) instruments and variables, including operational definitions and the validity and reliability tests performed; (5) data collection procedures; and (6) data analysis techniques, including the software used. Cite established methods instead of describing them in full; for instance, cite Martilla and James (1977) when applying importance–performance analysis. Where relevant, also cite the regulatory basis, such as Republik Indonesia (2008) for shipping regulations, or the theoretical basis, such as Stopford (2009) for maritime economics.

Research ethics. For studies involving human participants (e.g., surveys, interviews, or observations of cadets, crew members, or port users), state how informed consent was obtained and how confidentiality was protected, and give the name of the ethics committee and the approval number where required. Obtain permission from the company, vessel, or port authority before publishing photographs, internal data, or documents.

Tables and figures. Number tables and figures consecutively, place them close to their first mention, and refer to each of them in the text. Table titles are placed above the table and figure captions below the figure, and the source is stated below each table or figure. Obtain written permission for any reproduced material. Figure 1 shows the general conditions of vehicle unloading on the deck of KMP Kalabia, and Table 1 summarizes the observed loading and unloading characteristics and their associated risk levels. Figure 2(a) illustrates deck

conditions during passenger and vehicle disembarkation, while Figure 2(b) shows vehicle movement during unloading operations. Interpret, rather than repeat, the information shown in tables and figures. (12 PT/Times New Roman, Spasi 1,5)

Figure 1. Field conditions during vehicle loading and unloading on KMP Kalabia

Table 1. Characteristics of loading and unloading activities on KMP Kalabia

Trip	Number of vehicles (units)	Loading and unloading time (min)	Risk level
1	8	12	Medium
2	12	18	High
3	15	25	High

(a)

(b)

Figure 2. Unloading activities on KMP Kalabia: (a) deck conditions during passenger and vehicle disembarkation and (b) vehicle movement on the deck during unloading operations

3. RESULTS AND DISCUSSION (12 PT/TIMES NEW ROMAN)

Present the results in a logical sequence that follows the research objectives, and use tables and figures only when they communicate the findings more clearly than text. Report the key values (e.g., means, percentages, test statistics, and p-values) and avoid repeating the same data in the text, tables, and figures. Results and discussion may be presented together or in separate subsections, but avoid fragmenting the section into many short subsections. (12 PT/Times New Roman, Spasi 1,5)

3.1. Subsection Title

Equations are centered and numbered consecutively with Arabic numerals in parentheses aligned to the right margin, as in Equation (1). Use the Microsoft Word Equation Editor or MathType.

$$E_v - E = \frac{\hbar^2}{2m} (k_x^2 + k_y^2) \quad (1)$$

where E_v is ..., $\hbar$ is the reduced Planck constant, m is ..., and k_x and k_y are Define every symbol used in an equation, with its unit, immediately after the equation.

3.2. Citation Style

Cite sources in the APA 7th edition author–date format; numbered citations such as [1] are not used. For a work by one or two authors, cite all names every time, e.g., (Stopford, 2009) or Sharma and Kim (2022). For three or more authors, give only the first author followed by “et al.” from the first citation, e.g., (Hetherington et al., 2006) or Kim et al. (2021). Separate multiple sources with semicolons in alphabetical order, e.g., (Kim et al., 2021; Wang et al., 2021). Every in-text citation must appear in the reference list, and every item in the reference list must be cited in the text.

3.2.1. Sub-subsection title (use only when necessary)

Text of the sub-subsection.

3.3. Discussion

The discussion must interpret the findings, not restate them. Address (1) what the findings answer in relation to the research objectives; (2) why the findings occurred, explained with relevant theory; (3) how they compare with previous national and international studies, including agreements, disagreements, and possible reasons (e.g., Kim et al., 2021; Wang et al., 2021); (4) the contribution and novelty of the study; (5) the theoretical and practical implications, for example for ship operators, port authorities, regulators, or maritime education and training institutions; and (6) the limitations of the study.

3.4. Manuscript Formatting

Prepare the manuscript in Microsoft Word using this template on A4 paper, in Times New Roman 11 pt with single line spacing, and apply the built-in styles of this template (Heading 1–3, Body Text, Caption, Reference) rather than formatting text manually. Research articles should be at least 10 pages long, including references. Write in clear academic English and have the manuscript proofread by a proficient English editor before submission; machine-translated text that has not been carefully edited will be returned to the authors. The

title, abstract, keywords, author names, author order, and affiliations entered in OJS must be identical to those in the manuscript.

4. CONCLUSION (12 PT/TIMES NEW ROMAN)

The conclusion answers the research objectives stated at the end of the Introduction and summarizes the main contributions of the study, without repeating the abstract or the detailed results and without introducing new data or citations. Write it as one or two paragraphs rather than a list. Add practical recommendations derived from the findings, acknowledge the main limitations, and suggest directions for future research.

5. DECLARATIONS (12 PT/TIMES NEW ROMAN)

Author contributions: Describe each author's role using the CRediT taxonomy, e.g., K.T.: Conceptualization, Methodology, Writing – original draft; B.: Data curation, Formal analysis; M.B.: Investigation, Visualization; R.B.: Supervision, Writing – review & editing. All authors have read and approved the final manuscript.

Conflict of interest: The authors declare no conflict of interest. If any author is a member of the Jurnal Venus editorial board or reviewer team, state it here; the manuscript is then handled by another editor, and the author is excluded from all editorial decisions on it.

AI usage statement: During the preparation of this manuscript, the authors used tool name and version for purpose, e.g., language editing. The authors reviewed and edited the output and take full responsibility for the content. Generative AI was not used to produce data, analyses, findings, or references. If no AI tool was used: “The authors did not use generative AI tools in preparing this manuscript.”

Ethical approval: This study was approved by ethics committee (approval number ..., dated ...), and informed consent was obtained from all participants. If not applicable: “Not applicable.”

Funding: This research was funded by funder under grant number If none: “This research received no external funding.”

Data availability: The data supporting the findings of this study are available from the corresponding author upon reasonable request.

Acknowledgments: (if applicable) Acknowledge individuals or institutions that assisted the study but do not meet the criteria for authorship, with their consent.

REFERENCES (12 PT/TIMES NEW ROMAN)

Include at least 20 relevant references, approximately 80% of which were published in the last five years; older sources are acceptable only for seminal works, theories, methods, or regulations. Prioritize peer-reviewed national and international journal articles with DOIs, and limit theses, final projects, lecture notes, and unpublished reports. Every reference must be verifiable: check each DOI before submission and make sure that the authors, title, journal name, volume, issue, and pages match the original source. Format the list in APA 7th edition, in alphabetical order, using a reference manager (Mendeley, Zotero, or EndNote). The entries below show the format for each source type; full guidelines: <https://jurnal.pipmakassar.ac.id/vns/Authorsguideline>. (11 PT/Times New Roman, Spasi 1,15)
