

## DS-80 'Memory' Finish Offerings

**Wood Structure**

Matte Black Lacquered Beech

North American Walnut

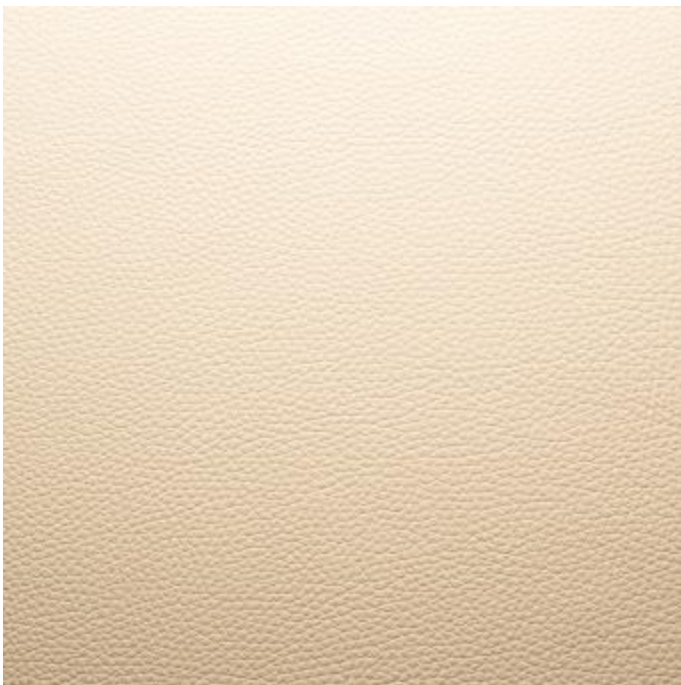

## Living

Lightly pigmented, with a subtle grain pattern

Thickness 1.5 to 1.7 mm

Elegant in appearance, particularly durable. Thanks to its easy-care finish, it is not sensitive to moisture, stains or the effects of light exposure.

Living unites practical considerations and a high level of esthetics.

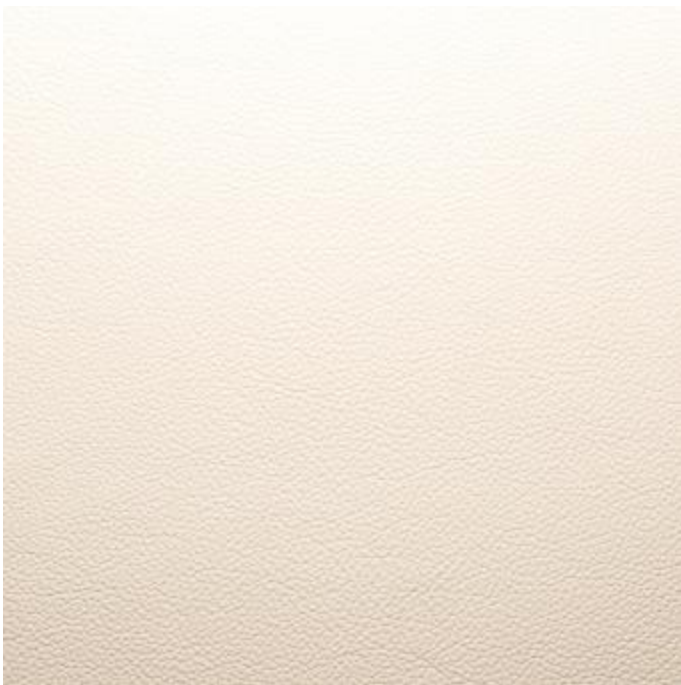

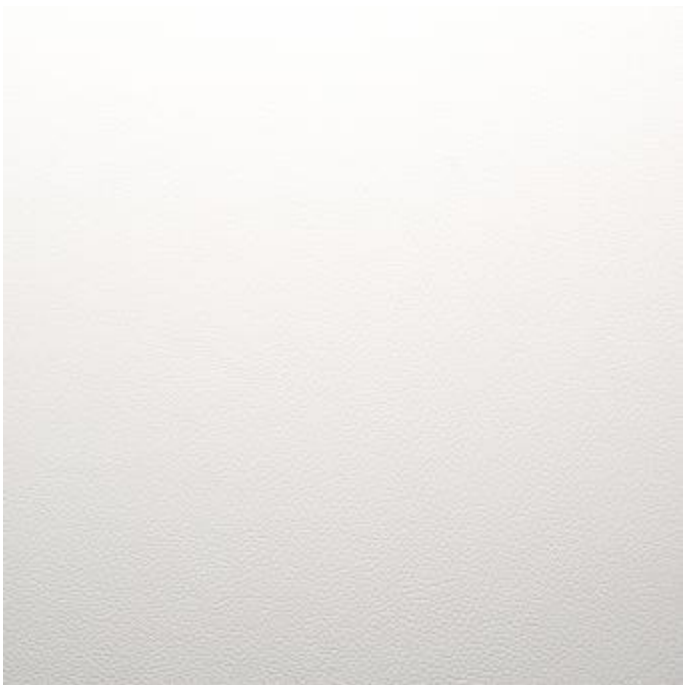

## **Select**

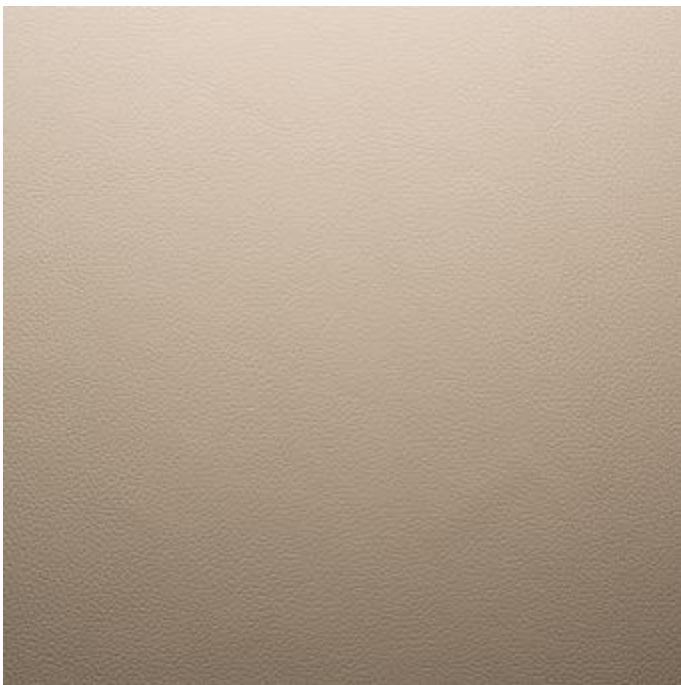

Nappa leather, lightly pigmented

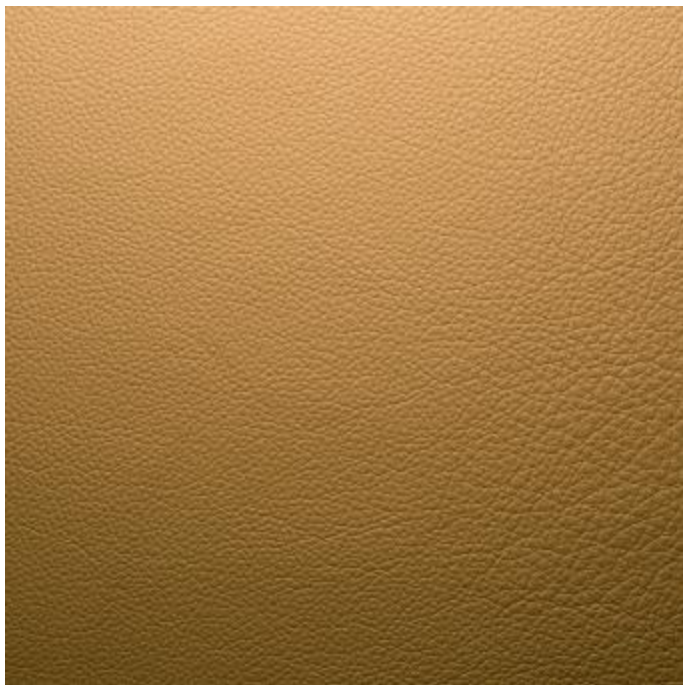

Thickness 1.2 to 1.4 mm

Painstakingly processed to retain naturalness – with characteristic wrinkle, grain and pore patterns. Dyed through after tanning, with a special finish that retains the natural appearance of the leather and improves protection at the same time. Select is subject to a natural aging process, for a charming patina.

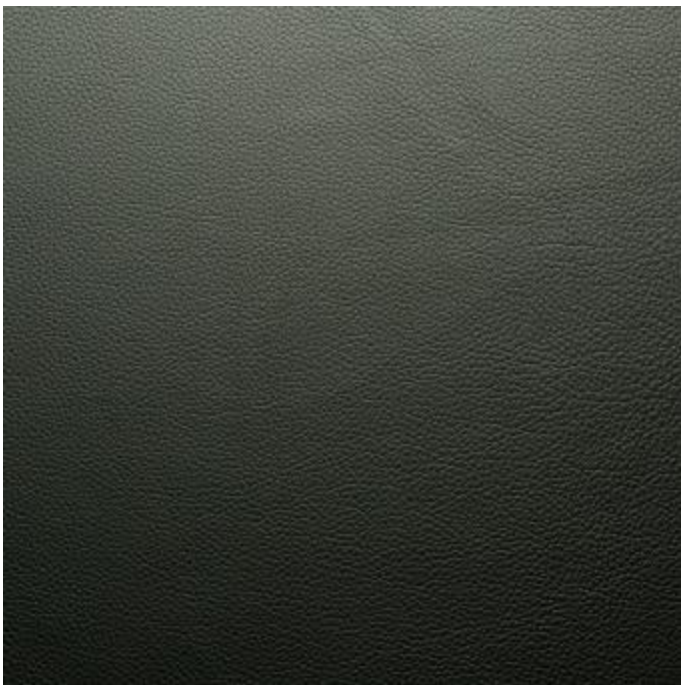

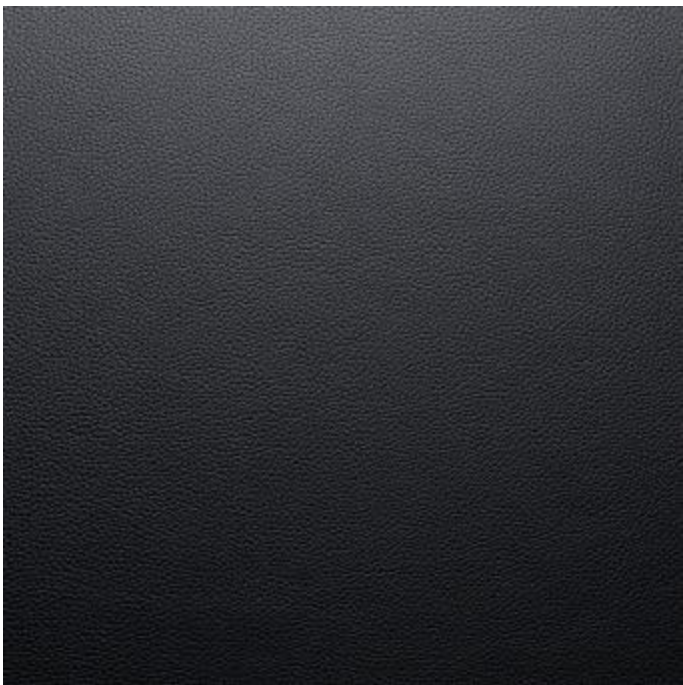

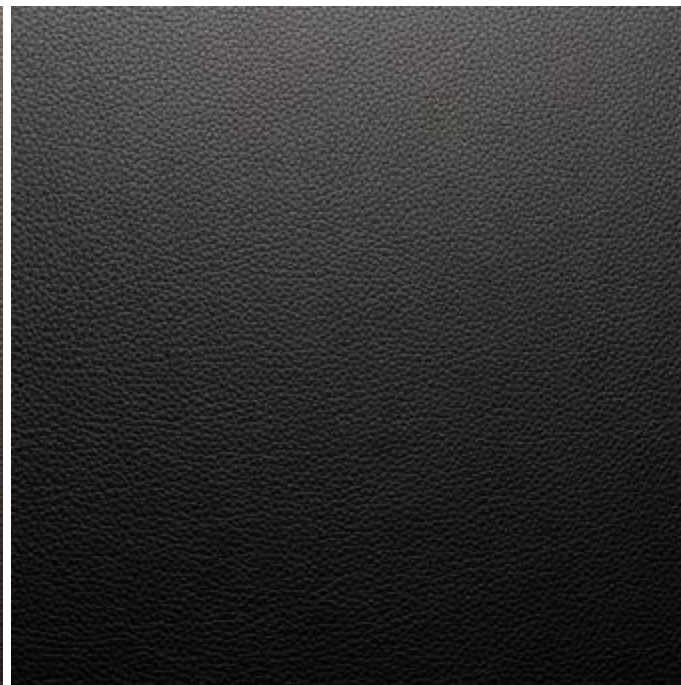

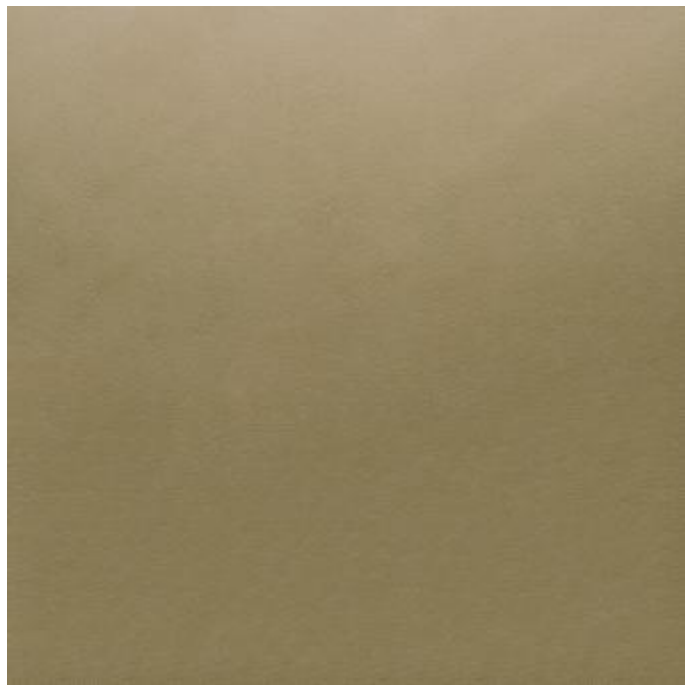

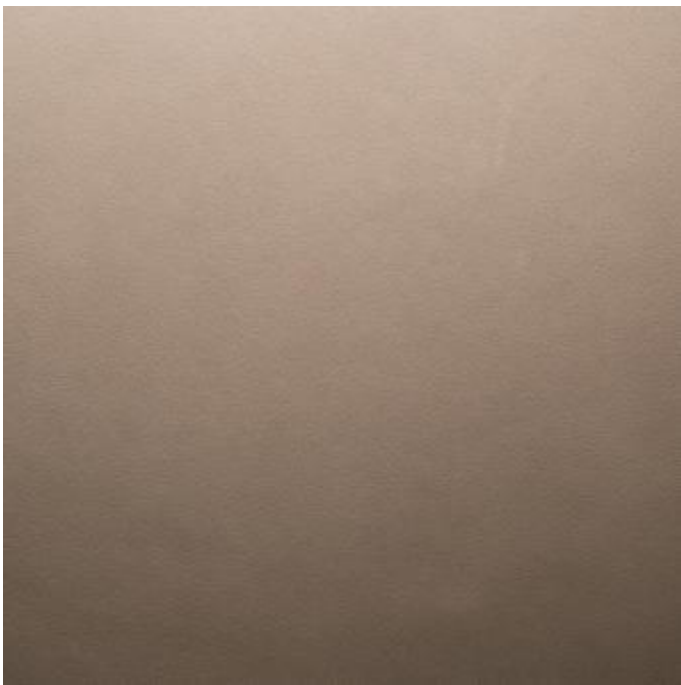

## **Touch**

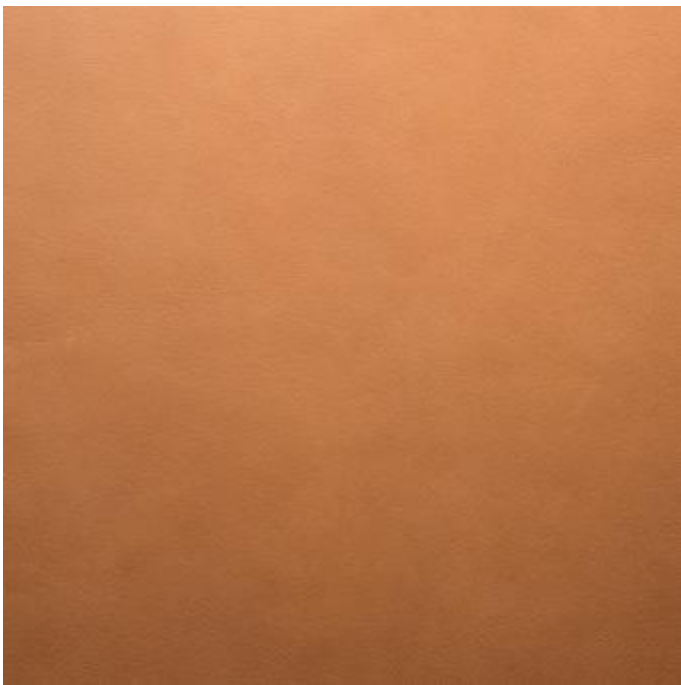

Nappa leather, refined

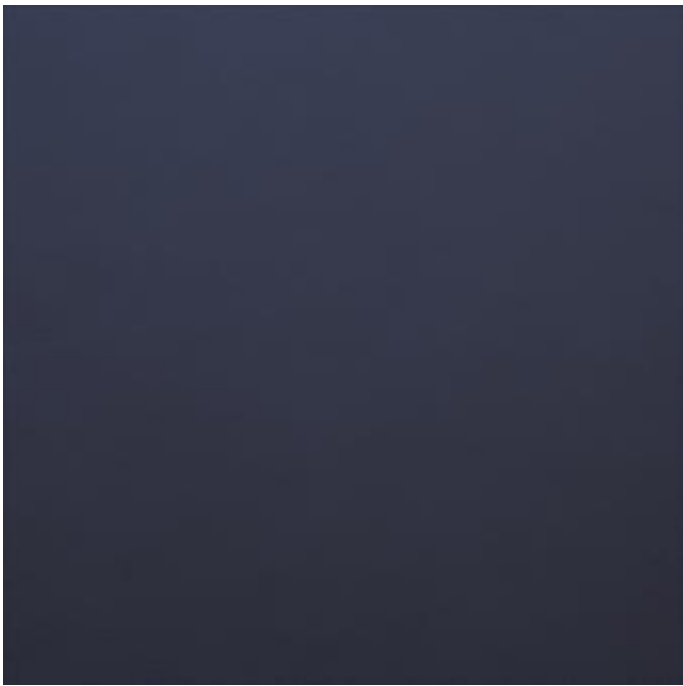

Thickness 1.2 to 1.4 mm

Unique appearance thanks to the unadulterated texture and silky sheen on refined hide – a leather that could not be more original or higher in quality. Its unique feel is particularly fine and intense. During the aging process, it forms a particularly authentic, exquisite patina.

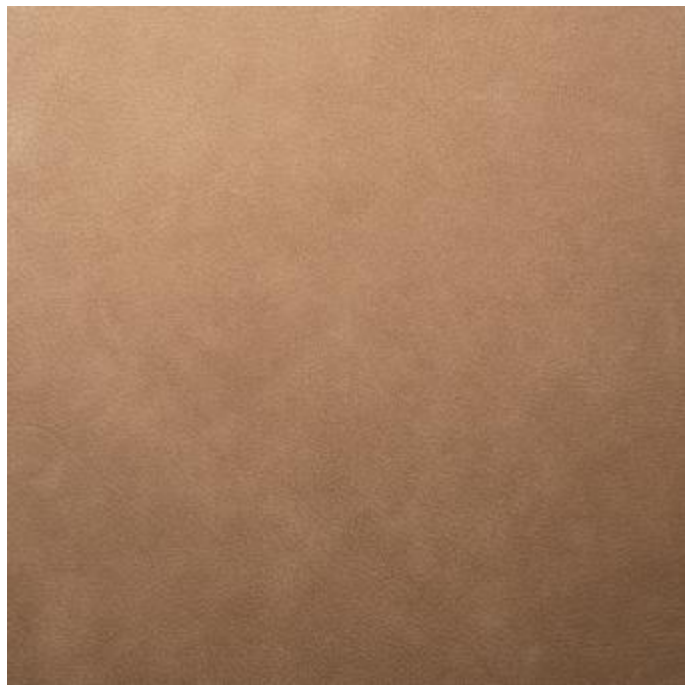

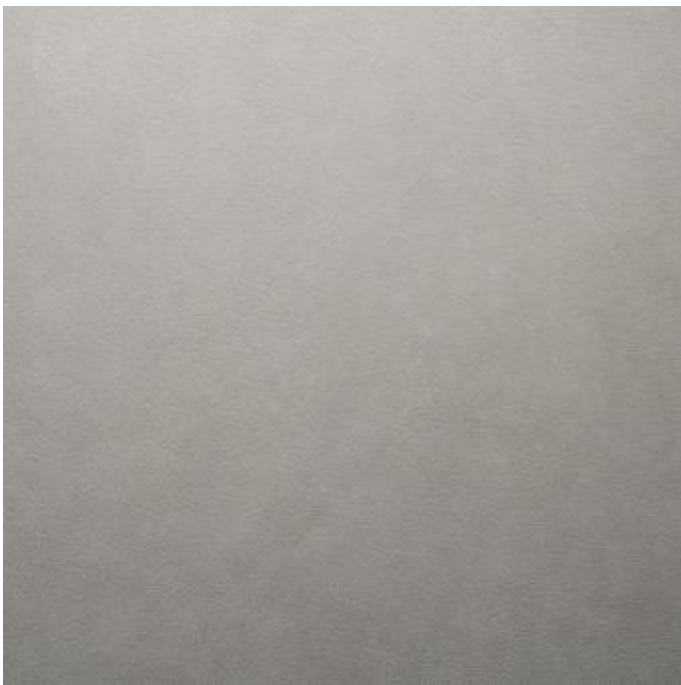

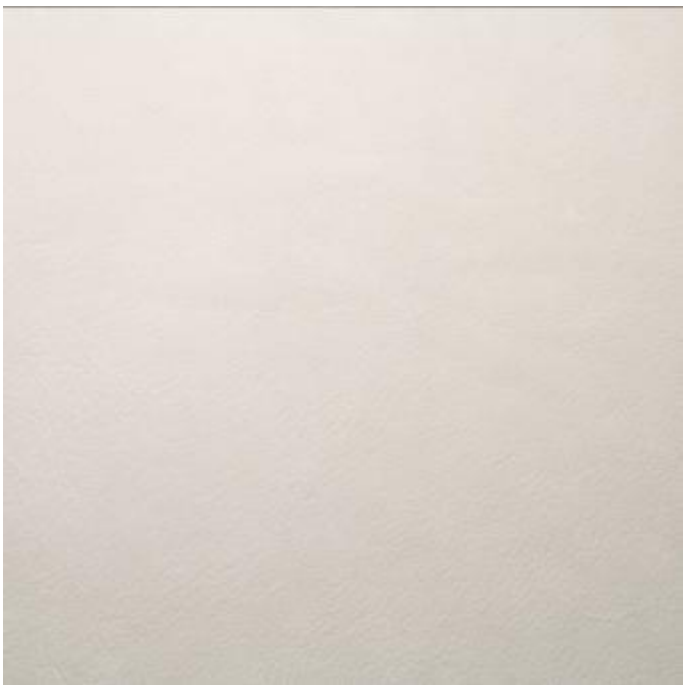

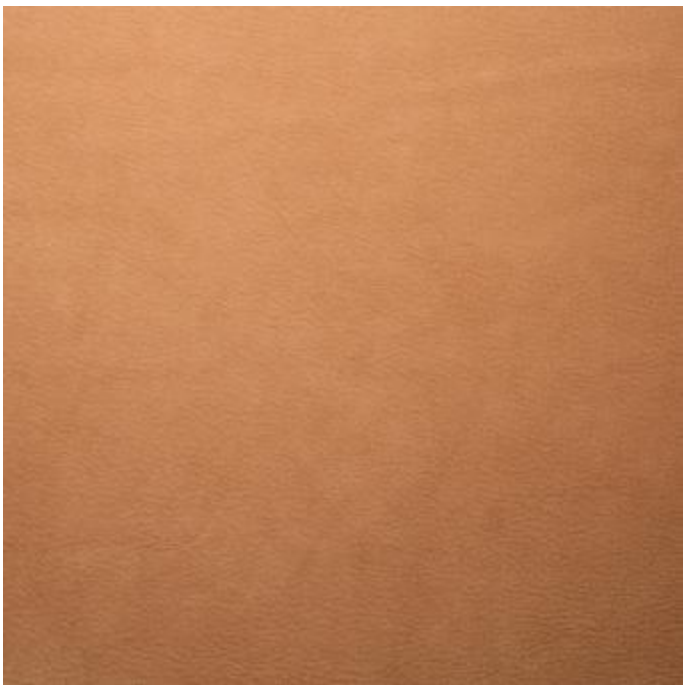

## **Kaschmir**

Nubuck leather with very smooth feel

Thickness 1.2 to 1.5 mm

The leather is known for its soft and velvety feel. Depending on the nap direction the matt look changes, for a beautiful and individual experience of the leather. The leather is natural and breathable. The use of Kaschmir leather is limited to certain models.

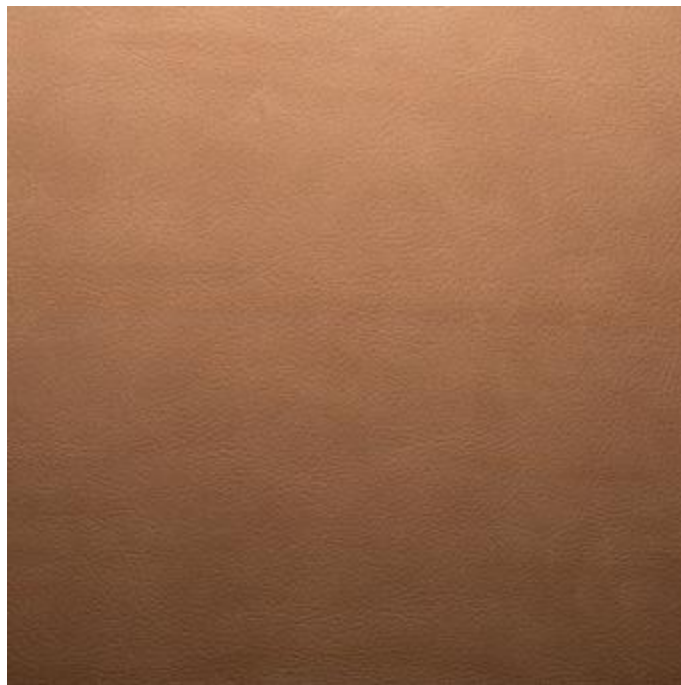

## Naturale

Nappa leather, natural

Thickness 1.5 to 1.7 mm

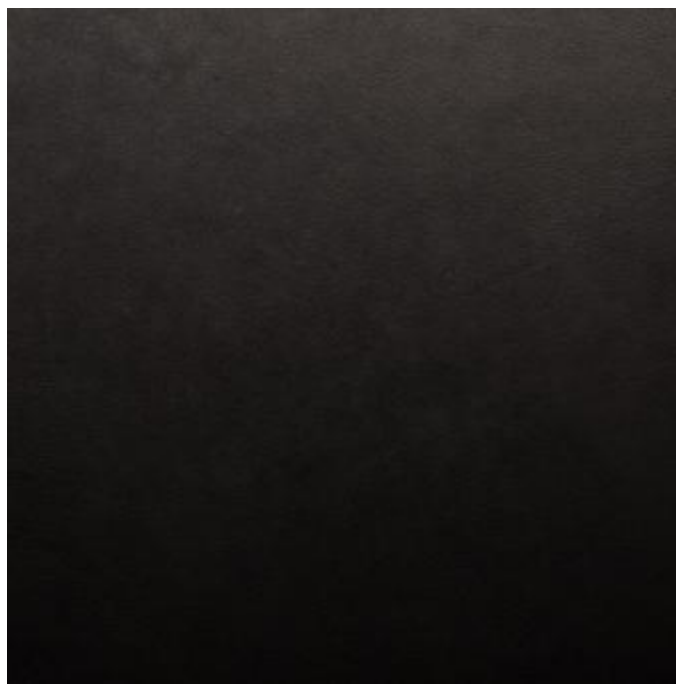

Unquestionably the most authentic way to own leather with all the positive properties of the natural material exceptionally soft and supple, with a silky feel. **Naturale** is a leather that lives and breathes. Leather changes over time through contact and the effects of light exposure. A patina forms that is characteristic of high-quality leather. The unsealed **Naturale** can present slight differences in color intensity, but this emphasizes the original

character of the leather. Only this makes the natural features of the processed animal hide, such as the characteristic fat wrinkles, recognizable and underscores the natural and elegant surface.

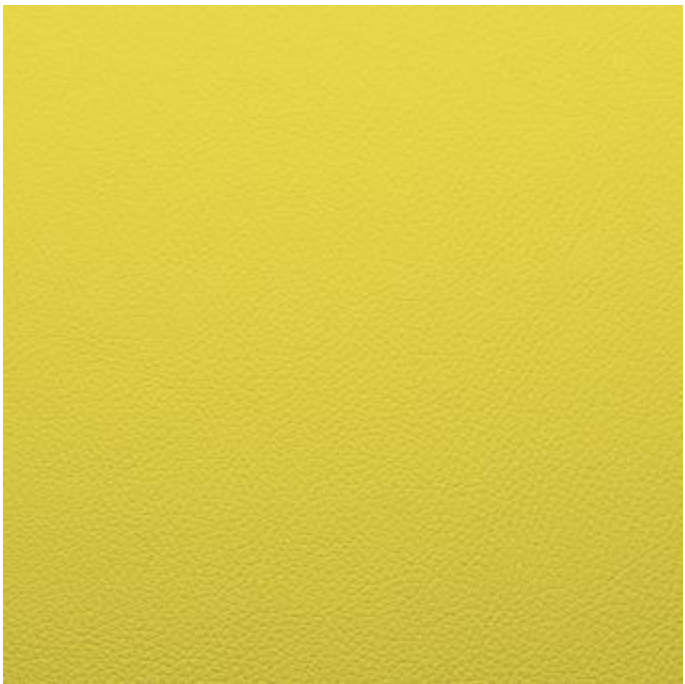

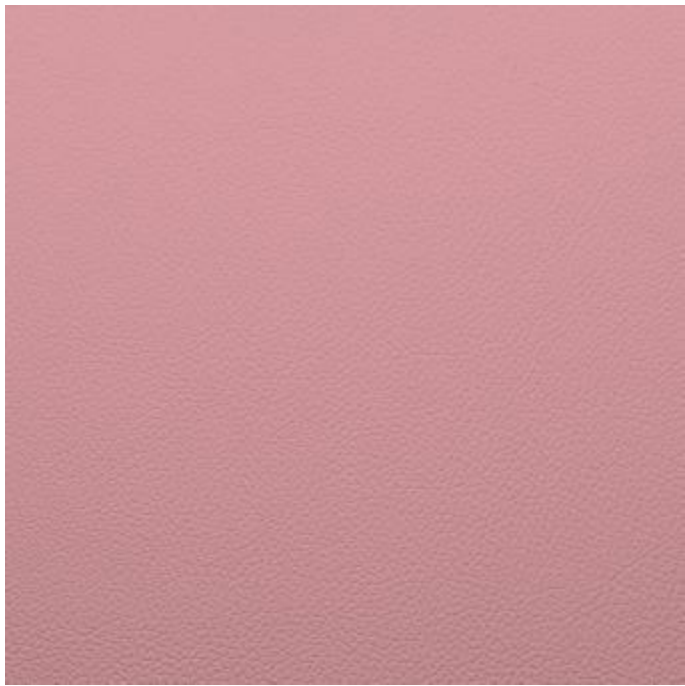

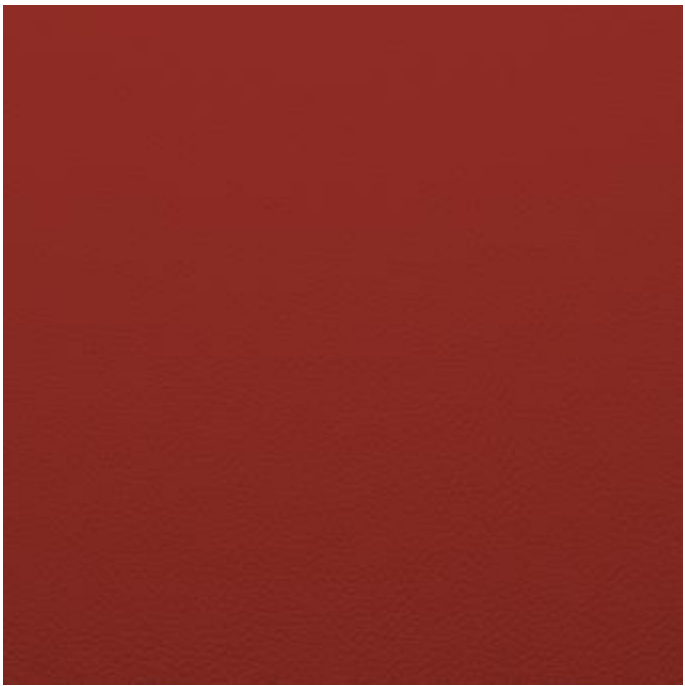

## **Coloral**

Nappa leather, pigmented

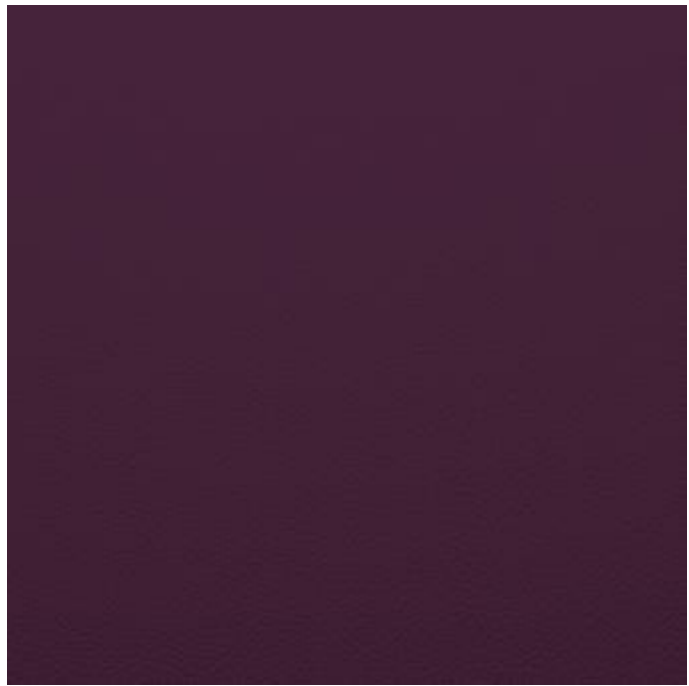

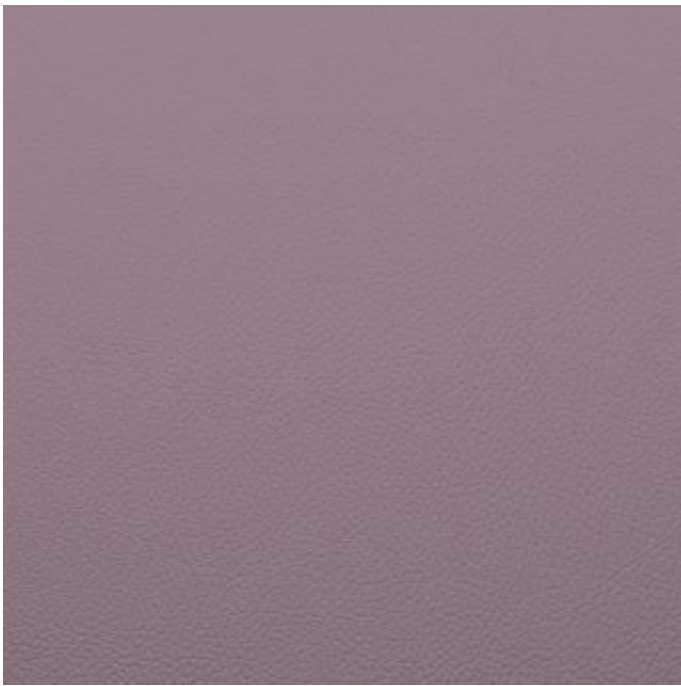

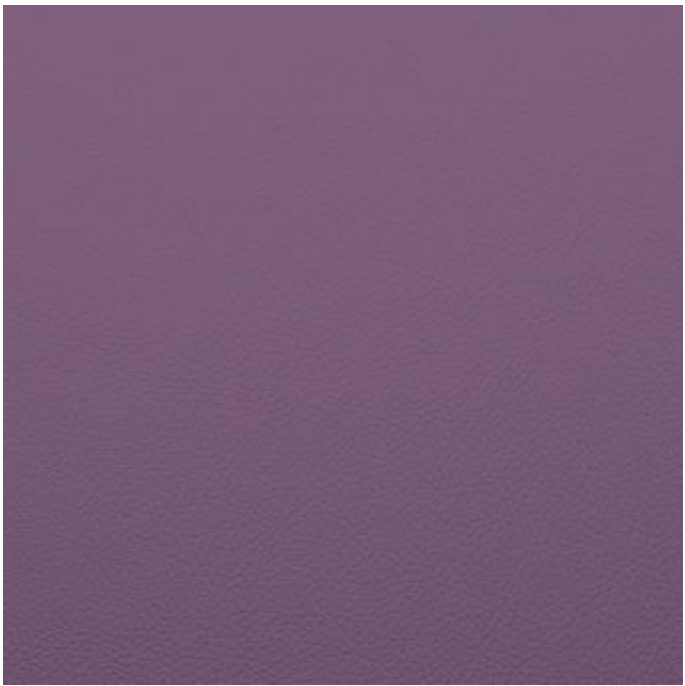

Thickness 1.5 to 1.7 mm

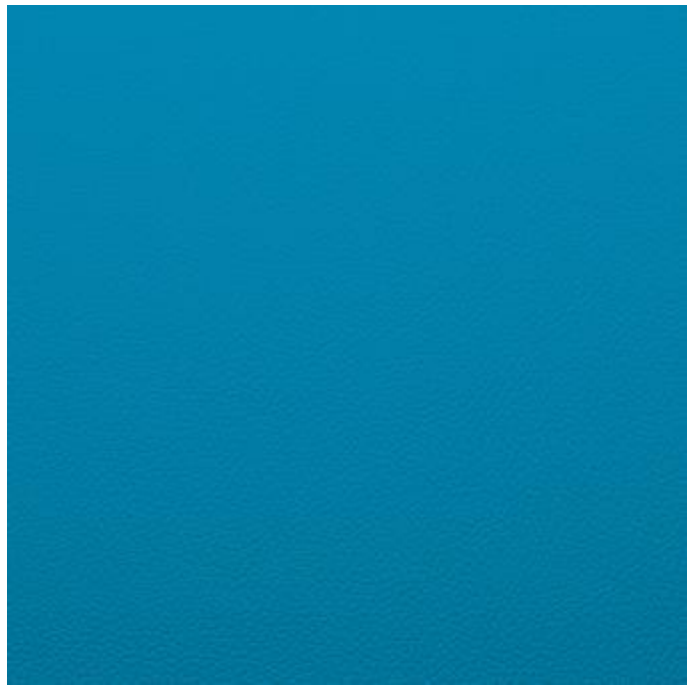

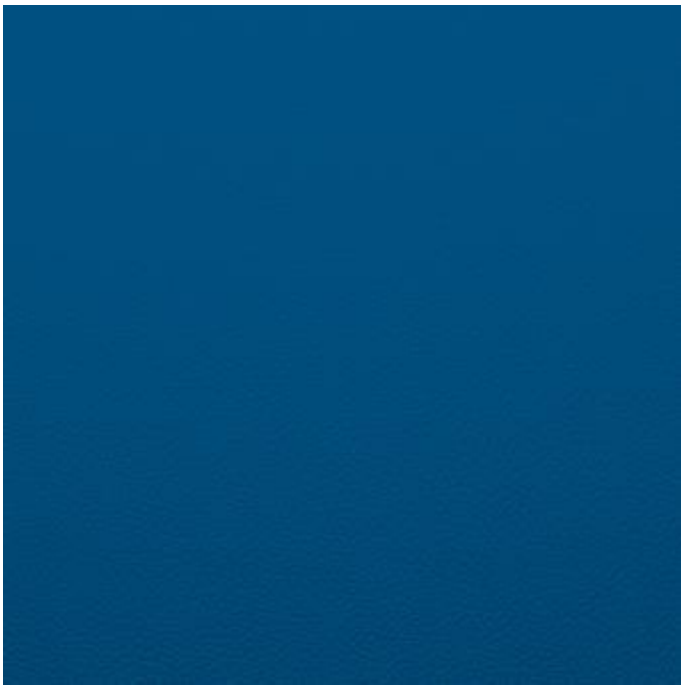

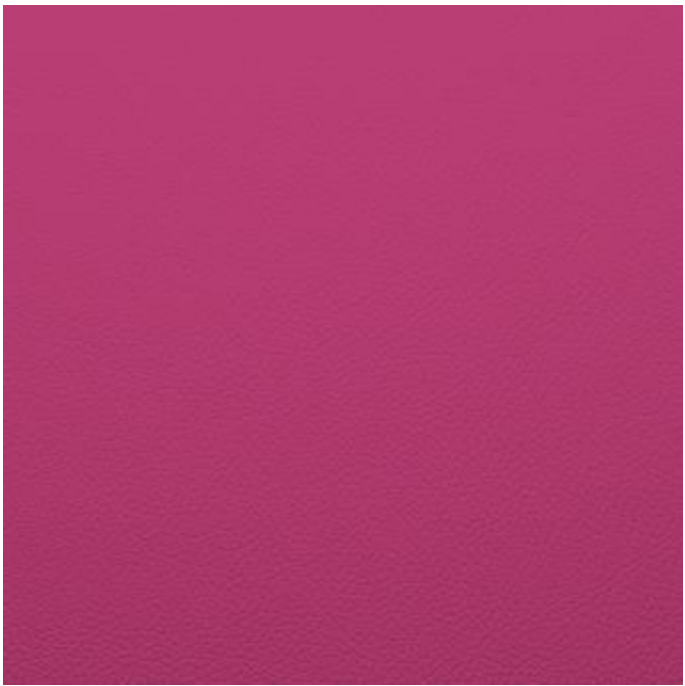

de Sede Coloral leather is a de Sede specialty and has been unique on the furniture market to date, since it can be dyed in any NCS or RAL color (minimum purchase quantity: 2 hides). The degree of sheen and color may differ from paper samples of NCS/RAL colors depending on the surface texture of the leather (color deviation).

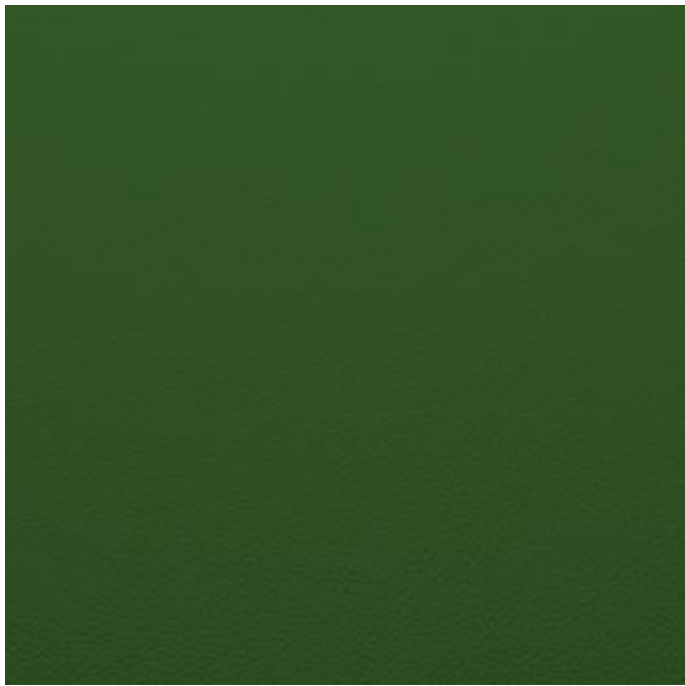

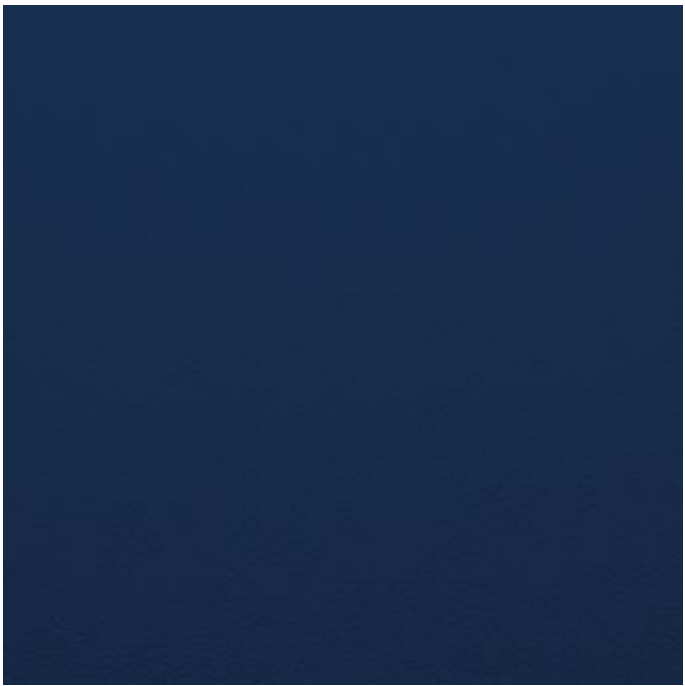

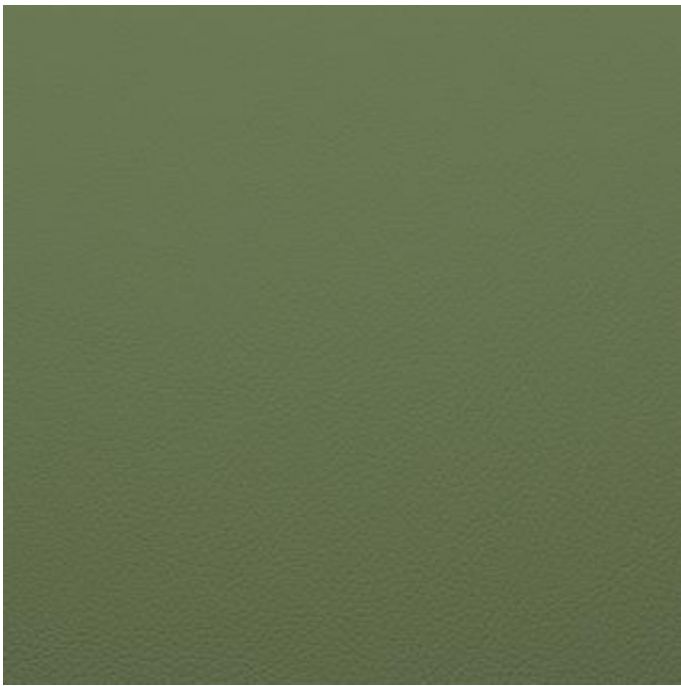

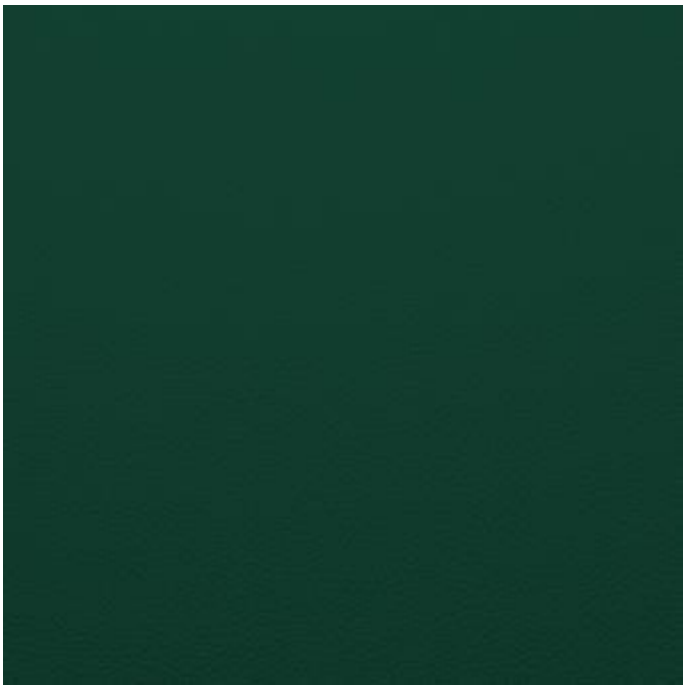

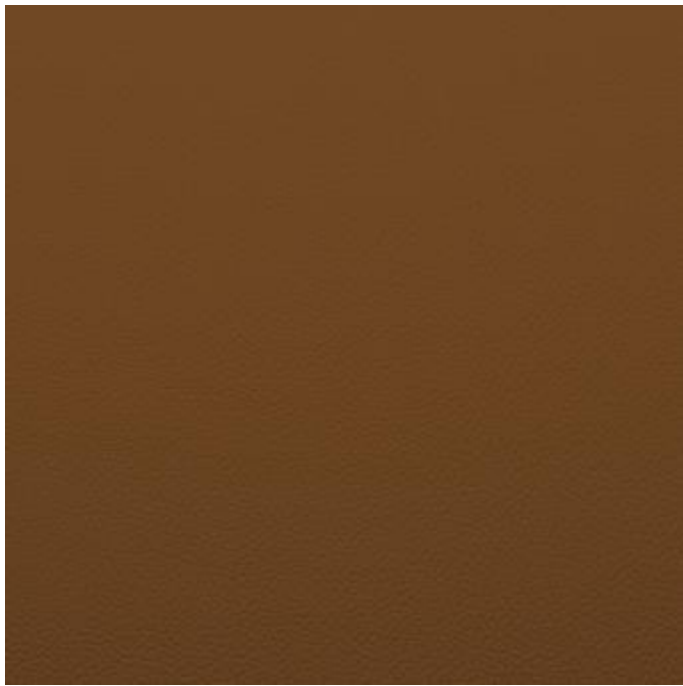

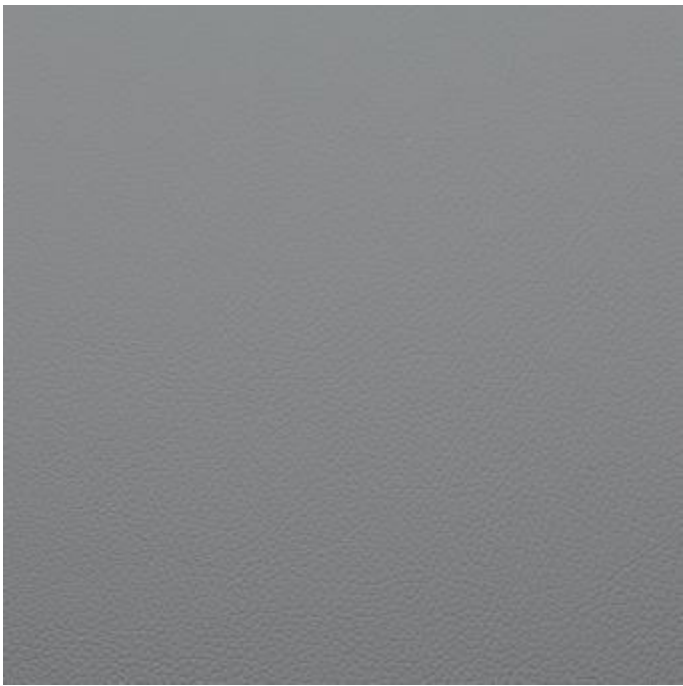

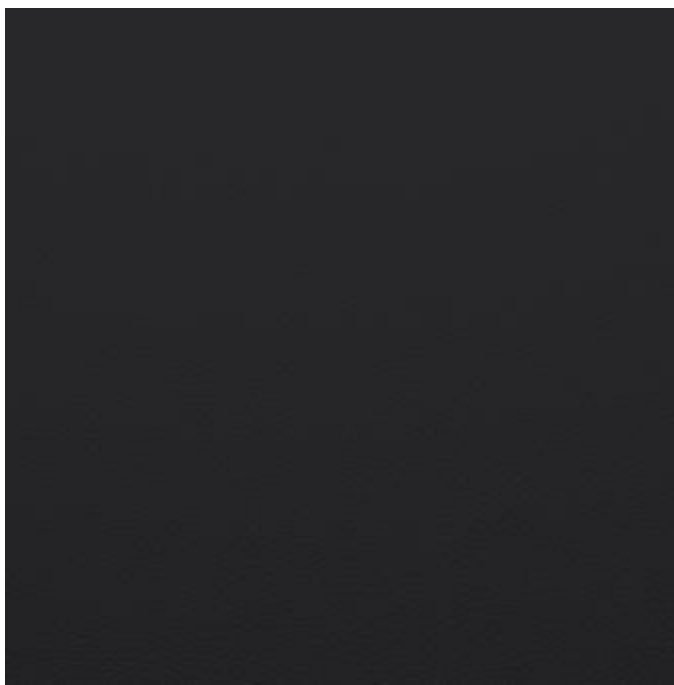

## **COM Leather**

Customer's own leather
