Technology

We can start with the <https://www.mapbox.com/impact-tools/sheet-mapper>

We need to have a [shared spreadsheet](#) for this which can be used by the api.

This has copied columns from [crowd source list](#) from j.mp/blrcauses

Our work can be as detailed or brief as we want.

However, we need location info -- the **GPS lat,long** -- to be able to place a pin on the map.

Example

Example showing *Hospitals* on a map, using Sheet mapper script (above)

<https://lapis-great-season.glitch.me/>

Modified Sheet with Geolocation (Conversion of address to lat/long using Spreadsheet

Available addon [Geocode by AwesomeTable](#) surprisingly it works for Kannada also)
