Neon: Sr. Fullstack Engineer
US-Based Remote or NYC

Neon's mission is to make NFTs accessible to *everyone*. Neon is an online gallery and marketplace where artists and creators sell unique digital prints, memorabilia, and other token-backed assets to their online fans. We believe digital ownership will touch every industry and play a role in further democratizing opportunity on the internet, especially for creators.

We are a well-funded Seed-stage startup backed by prominent investors including General Catalyst, Digital Currency Group, Entree Capital and many others. We're built on the Solana blockchain because it's the most environmentally friendly choice– a million times more energy efficient than Ethereum– with the fastest, cheapest transaction times.

Compensation (location dependent)
Salary: $90k - $150k
Equity: 0.2% - 0.5%

The Role
You'll work directly with our lead engineer and core dev team to develop Neon's product, our NFT marketplace. On our small team, your contributions will directly contribute toward the mission of Neon — to make NFTs accessible to all. This role will bias toward backend development.

Responsibilities

- Create, maintain and expand Neon's frontend and backend services
- Research and advocate for optimal architecture for our business needs
- Advocate for users in product conversations
- Scale services with our user growth

Requirements

- Faster learner, Growth Mindset
- Takes ownership and executes without the need for clearly defined parameters
- Strong communication skills, not afraid to speak up
- Excited by the opportunity to wear a variety of hats
- +3 years of experience with Node JS & React Native/JS

Preferred

- Shipped production level backend code
- Experience with AWS elastic beanstalk and dynamodb
- Understanding of the fundamentals of Web Systems
- Understanding of the fundamentals of blockchain, crypto, NFTs

If you're motivated, skilled in your trade, and obsessed with blockchain, crypto, defi and/or nfts please email us at hiring@neonapp.com*.*
