

# Zer0 DAO Token

## Essential items:

- The URL of a repo containing the source code
  - <https://github.com/zer0-os/zDAO-Token>
- Please invite the GitHub users **@david-oz** and **@tintinweb** to the repo
- The commit hash to be reviewed (OK if this is changing until March 1st)
  - ~~Version 1~~
    - ~~7d4e25b18f66111a0df1e34deb3e163e5a0847f7~~
  - Version 2
    - 81946d451e8a9962b0c0d6fc8222313ec115cd53
- A list of the files in scope and out of scope
  - Smart Contracts
    - ZeroDAOToken.sol
    - MerkleTokenAirdrop.sol
    - MerkleTokenVesting.sol
    - MerkleDistributor.sol
    - TokenVesting.sol
    - *And any relevant Interfaces / base contracts*
- Documentation describing the intended functionality of the system
  - <https://github.com/zer0-os/zDAO-Token/tree/master/docs>
- A list of the key risks for us to ensure are mitigated
  - Stealing tokens
  - Taking tokens not yours
- Names and emails of the key personnel we will work with during the engagement
  - Zachary Nawar (zachary@dorg.tech)

## Additionally, the following items are non-essential, but are very helpful to us:

- Clear instructions for setting up the system and run the tests (usually this is in a README file)
  - Documented in the README: <https://github.com/zer0-os/zDAO-Token>
- Any past audits
- Tooling output logs (e.g. MythX, Surya, etc.)
- Output generated by running the test suite
  - Please run `yarn test`
- Test coverage report
  - This is generated by `yarn coverage` and can be found in the `coverage.json` file at root.
