Stuck Local Wallet / Stuck Block / No Syncing
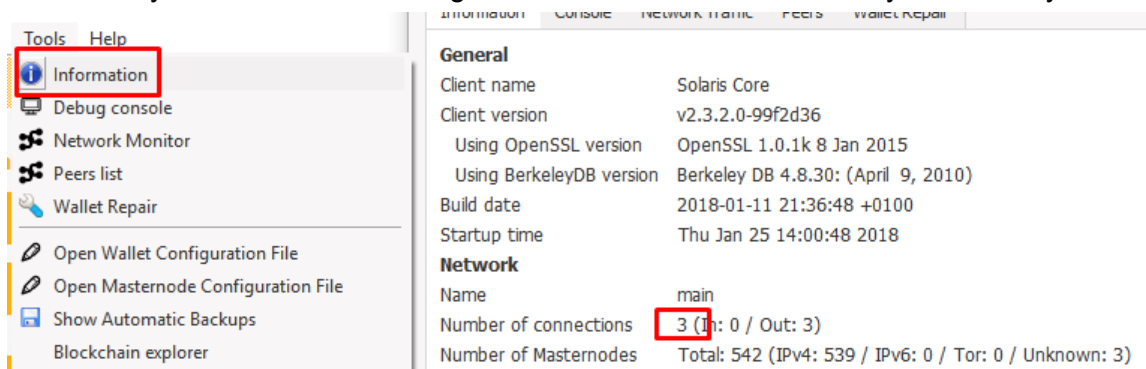

Wallet is not synchronizing - No Block Source Found

If you have just installed the Wallet and it is not synchronizing after leaving it open, do these steps:

1. Stop/shutdown your wallet client if it is running.
2. Go to %appdata%/solaris/ and back up the wallet.dat file.
3. Delete the 'blocks', 'chainstate', 'sporks' and 'zerocoin' folders from your data directory.
4. Download the bootstrap from
https://drive.google.com/file/d/10ImXoZ0kd52hzRacJRMG4HfqZF0IKk4h/view?usp=sharing
5. Extract the downloaded zip file, you will see it contains a bootstrap.dat file.
6. Place the extracted bootstrap.dat file in your data directory.
7. Start your wallet client.

Wallet is not synchronizing - Stuck on certain block, connections to peers exist

To check if you have connections, go to Tools>Information. Check if you have any connections.

If you have active connections, do these steps:

1. Stop/shutdown your wallet client if it is running.
2. Go to Win: %appdata%/solaris/ OR Mac: ~/Library/Application Support/Solaris/
3. Delete all files and folders EXCEPT backups, folder, wallet.dat, solaris.conf and masternode.conf (DO NOT DELETE backups folder, wallet.dat, solaris.conf and masternode.conf)
4. Start your wallet client and let it sync again.

Staking

How do I set-up staking?

Follow the guide here: https://t.co/CRqVYqpGy0

Masternodes

Using old version of the wallet on VPS?

Update guide:
https://docs.google.com/document/d/1zkB80TxtMa9nYbdnjsMqnZqqndNZNsaIkp46ykoWWPg/edit?usp=sharing

Masternode is MISSING after updating to 2.8.0.0

Go back to your VPS and type these commands:

```
cd solaris

./solaris-cli stop

./solarisd -daemon -reindex
```

Start it from debug console again.
