Or, variations on...

Your code was not the impostor. 1 impostor remains.

(cs5 warning: the impostor may be disguised as a multiplier circuit!)

hw4pr0: reading responses (to the Ariane5 article)

- Read the excerpt and questions at https://www.cs.hmc.edu/twiki/bin/view/CS5/Reading4
- Week 4 had two prompts they should have addressed both (-1 or -2 if not)
 - 1. Which contributing factor within the bug's origins [[of the Ariane 5 rocket]] (there are many!) strikes you as the "most preventable" and why? Of course, this will be in hindsight....
 - 2. The investigative report that uncovered the bug stated that software "does not fail in the same sense as a mechanical system." Do you agree or disagree with this statement? Explain briefly.
- Here is a very general page of scoring guidelines and possible comments

hw4pr1: lab (base conversions)

- These lab problems will be handled by our lab-grading experts! (Thank you!)

hw4pr2: **Gold** *Conversions and Compression*

hw4pr2: Black Conversions and Compression

hw4pr3: **Black** *Quadtrees!*

For all of these assignments, things should already be auto-graded, but please

- check them over / adjust grade based on style and effort
- - Style points
 - take off -6 points if there were lots of functions with **no docstring**
 - take off -2 points if there were ~2 functions with no docstring
- - Correctness points already autograded
- If they lost lots of points
 - check to see if there was a cascading error that did it (perhaps unrelated)
 - if so, you can give BACK some points to reflect the effort involved

- this can be done for the whole assignment (give 20-30/60) or per-problem
- probably not beyond **40-45** or so points for non-working code
- -- all the more reason to give a score of 42!
- give an encouraging comment (and Zombie joke, or your other favorite joke...)

hw4pr3 Gold (extra credit): Image processing!

- Take a look at their images! Here's the hw page....
- If they did **everything** in the extra credit specification, but only on the SPAM image (or any one image), give +7.42 These are
 - greyscale, binarize, flipVert, flipHoriz, mirrorVert, mirrorHoriz, scale
 - IF they didn't include the images themselves, **give +1**
- If they **also** added their own image **or** added their own image-processing algorithms (let's say for at least 2-3 outputs), give +10
- Partial E.C. points are available, perhaps +4.2 if they tried some image processing work (beyond the examples provided!)...

If time [Not in S'21],

hw5pr1 and hw5ss1-4: **Gold** (new labs + screenshots)

Thank you, everyone, for grading CS5!

See you next Th for *circuit grading...*

Worth keeping on all grading pages: XKCD's 10,000 strip: http://xkcd.com/1053/

How to get to this page:

The CS5 site should be top link when Googling These notes are linked at the bottom of CS5's page as **for grutors - guidelines** Also, the submissions site is at

hmc cs5 cs.hmc.edu/submit

"Good" zombie jokes to use...

Actually, these are not good... there should be better ones, but perhaps it's a sign that there aren't!?

- Q: Why did the zombie ignore all his new Facebook friends?
- A: He was still DIGESTING all his old Facebook friends!
- Q: What did one zombie say to the other zombie while eating a comedian?
- A: This tastes FUNNY!
- Q: What do vegetarian zombies crave?
- A: GRAAAINS...more GRAAAAAAINS!
