

Meshery Playground: Identified Issues

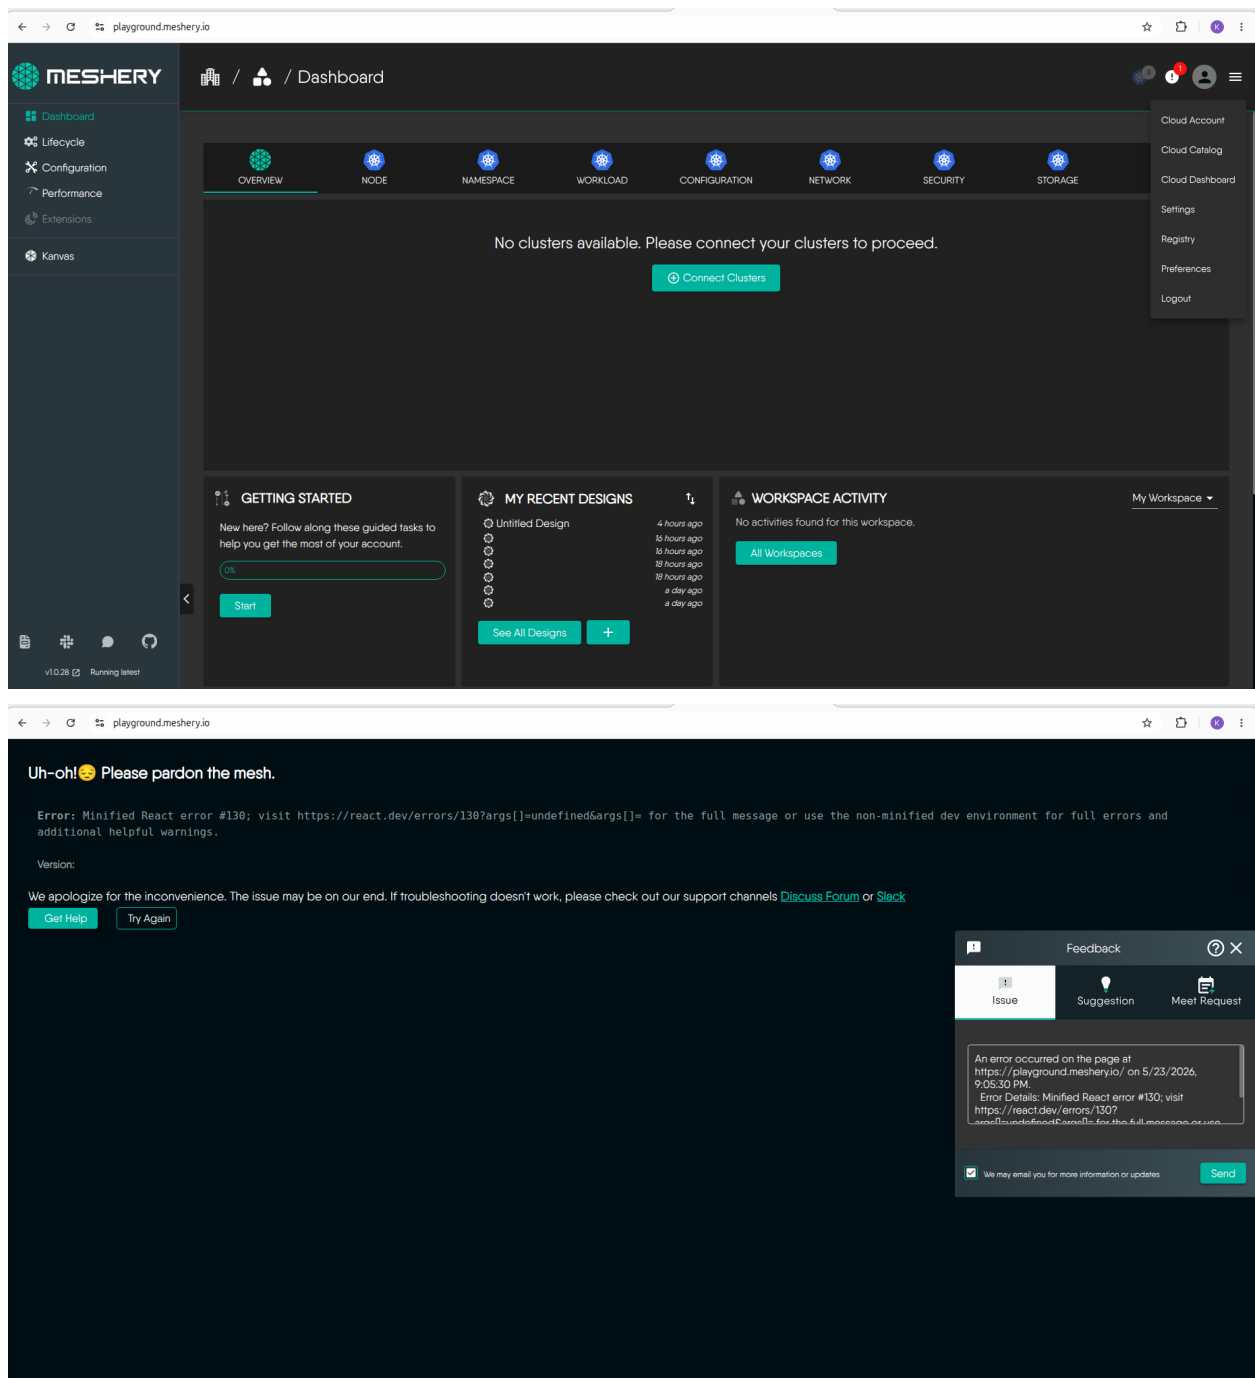

Meshery Playground: Identified Issues

1. **Authentication Redirection Inconsistency:** Users authenticating via Google are redirected to the Meshery Playground landing page, whereas sign in using email and password redirects users to the Layer5 Cloud dashboard.

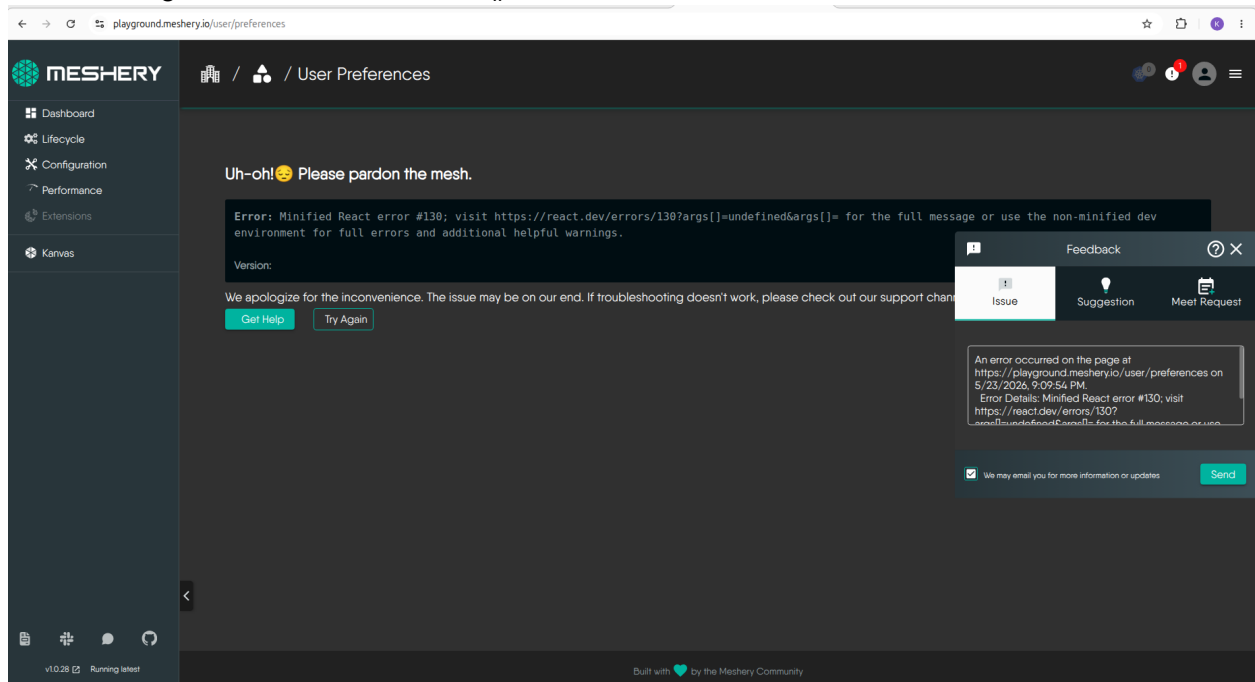

2. **Email Authentication Failure:** The authentication process for email and password credentials fails to establish a valid session for the Meshery Playground environment, preventing user access after login.

3. **Registry Navigation Malfunction:** The "Registry" button located within the navigation menu does not initiate the intended action or redirect the user. (#PR)

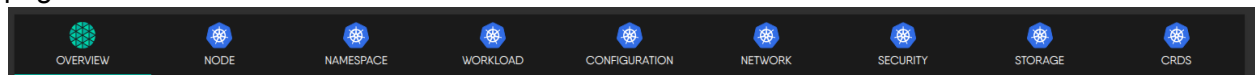

4. Users are currently unable to select a service provider within Meshery Playground.

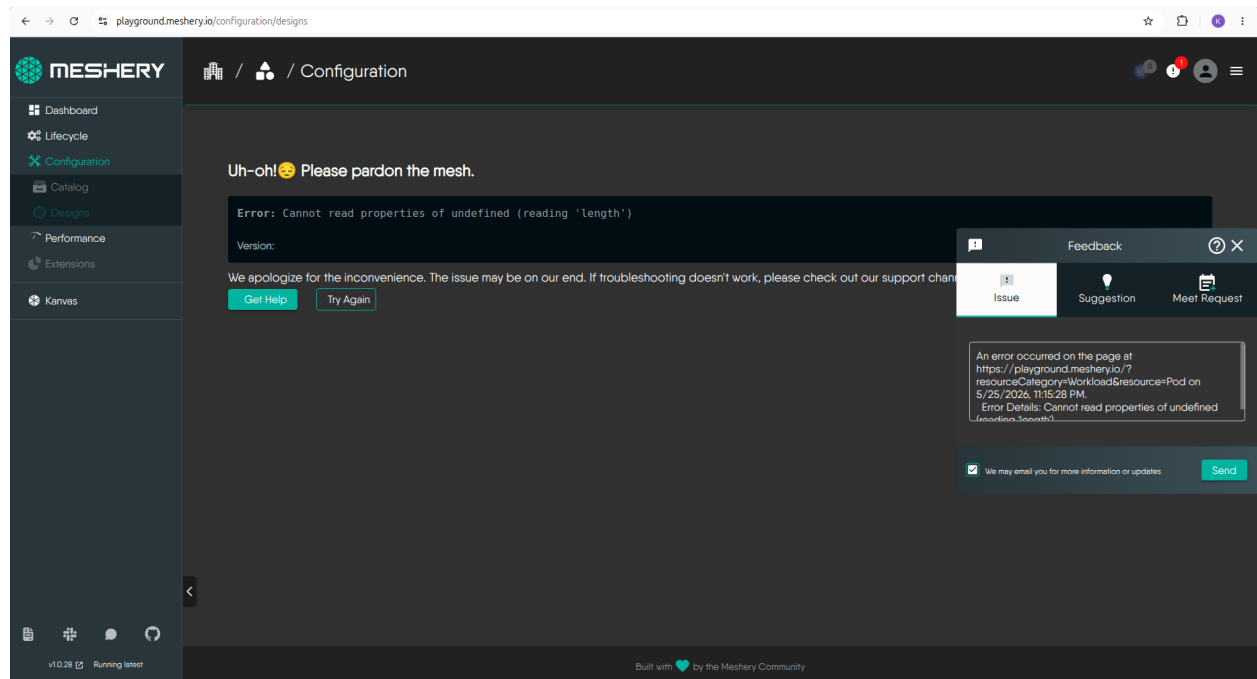

5. User Preferences Interface Error: The performance tab within the user preferences section is non-functional. This can be reproduced by navigating to the "Preferences" in hamburger menu and selecting the "Performance" tab. ()

6. Broken Icon Hyperlinks: Selecting specific icons within the interface results in a system error page.

7. Design page is broken

8. Kanvas Icon broken on

Registry Page Bugs

PRs raised by me

- 1) [UI] Fix Extensions page card layout and logo visibility in dark mode [#20030](#) (merged)
- 2) [UI] fix: correctly display and format total counts in registry tabs [#20031](#) (merged)
- 3) fix: deeplinking to specific relationship definitions [#20033](#) (merged)
- 4) fix: overflow in registry page [#20047](#) (merged)
- 5) fix: layout of component details in registry [#20063](#) (merged)
- 6) fix: registry dialog box z-index [#20064](#) (merged)
- 7) [UI] Fix: Registry layout in Settings Page [#20090](#) (merged)
- 8) fix: Modal Header icon [#20085](#) **(yet to be merged)**
- 9) fix: resolve Create a Model E2E test failure (Local - chromium-local-provider) [#20164](#)
