

I have 35 years working for National Defence, doing risk-based analysis on all sorts of interesting files. My specialty has been in risk-based assessments for operations, which has dove-tailed into my support for departmental Materiel Assurance policies and safety case analyses as part of the work that NRs do to support our national goals.

Whether we are engineers, surveyors, town planners, or architects, all of us work hard to provide valuable services to our employers and the Canadian public across the country. We work on local, national, and international projects and files. We work on minor, medium, and large capital projects. We strive to get our work done as best we can even though we do not always have the best resources, latest training, or even the proper workplace supports.

As an Eng-5 I am familiar with the tensions and demands of both management and workers. As a steward and past President of a Sub-Group, I have engaged management on many issues affecting NR's: Phoenix cases; accommodations for disabilities; accident reporting for compensation; workplace 2.0; and contractors usurping Public Service authority.

Let me be your voice and part of the team that works to meet your needs for today's workplace.
