

Dear Moorage Residents,

One of the simplest ways we can protect our homes and neighbors is by being ready to respond quickly if a fire starts on the dock or on a vessel. For this reason, it is important that each area of the moorage has a **50-foot hose with a working nozzle** available nearby.

Please help us maintain this important safety measure:

- Do not remove hoses** from the locations where they are placed. They are positioned so they can be used immediately in an emergency.
- Ensure a nozzle is attached and working.** A nozzle allows the water stream to be directed to the **base of a fire**, which is essential for effective fire suppression.

- Check the hose near your home** to make sure it is present, accessible, and in good working condition. (East side homes have a hose bib per house; West side homes share a common hose bib/standing hose rack per 2 or 3 houses.)

- Consider a second hose/nozzle** for the back of your home. *Recommended nozzle: [Orbit 58984 Thumb Control](#)*

In the early moments of a fire, quick action with a nearby hose can make a critical difference while emergency services are on the way. Your attention to this small step helps protect not only your home, but the entire moorage community.

Thank you for taking a moment to double-check the hose/nozzle near your home and for keeping our community safe.

Best,

Joan Flora, EPIC Chair
