jQuery Infrastructure Meeting - Oct. 17
Present: Adam, Michal, Kris, Michal, Richard, Jory

The group elected not to record the meeting as some of the issues we are discussing are related to security and vulnerability, and should be shared only trusted/known entities.

Roles & Responsibilities

- Roles of OpenJS & LF
    - The Foundation has a menu of services - it will be providing a set of vendors/plans and assisting projects with the management of those services via OpenJS & LF Staff
    - Foundation will manage access control (who has access)
    - Services Menu: https://docs.google.com/document/d/1yQgEMvnY0apAEYoiysfae7qqmbJAfd4eLgmGKviPZ_0/edit?usp=sharing
- Role of the Project & Maintainers
    - Project maintainers should be able to self-manage their servers, build tools, etc.

How to go about solving infra issues?

- Contractual agreement with a dev-ops firm or consultant may help mitigate risk - infra work has to be done by trusted parties
    - Work is too great to be done by one party
    - **ACTION ITEM:** Jory to discuss probable resource request with Robin/Brian
- Start with Core, which is at greatest risk
    - Look at the workloads of the servers - infra inventory is fairly complete
- Determine “What’s Frozen” vs. “What evolves”
    - What’s the list of things Core needs?
    - **ACTION ITEM**: Adam & Michal to start creating that list; document on /infra GH

Key Issues

- Separation of Core & UI/Mobile/other projects
    - Still need to keep other projects secure in some way
    - Detach some of it from the infra (static wordpress for example)
    - Keep trac in read-only mode

- Long-term Maintenance & Security
- Port builds/test infra to Travis - this can happen now
- Does Core want to keep the CLA?
