Abstract— **Background**: What is the latest knowledge on the issue? **Objective**: What did you want to find out? **Methods**: How did you go about finding it? What type of methodology did you use? A quantitative study/a randomized controlled study/a qualitative survey/a literature review/a double blind trial. Results: What did you find? What data or outcomes did you observe? Do not be vague! State exactly what you found. **Conclusion**: What did your results tell you? Did you find out what you wanted? Why or why not? What should be studied next? (Abstract consists of 150 to a maximum of 250 words. Abstracts are arranged in a structured manner.)

Keywords—keyword1; keyword2; keyword3 (Min 3, Max 6 phrases/keywords. A combination of all keywords represents the content, contribution, or purpose of the manuscript.)

I. INTRODUCTION

This template provides authors with most of the formatting specifications needed for preparing electronic versions of their papers for INTENSIF: Jurnal Ilmiah Penelitian dan Penerapan Teknologi Sistem Informasi. All standard paper components have been specified for three reasons: (1) ease of use when formatting individual papers, (2) automatic compliance to electronic requirements that facilitate the concurrent or later production of electronic products, and (3) conformity of style throughout a journal publication. Generally, a typical paper contains between 3000 and 6000 words, but there are no rigorous restrictions. Margins, column widths, line spacing, and type styles are built-in; examples of the type styles are provided throughout this document. Manuscripts must be structured using the IMRaD (Introduction, Method, Results, Discussion, and Conclusion) format. Introduction, Method, Results, Discussion, and Conclusion should be organized into separate sections[1], [2].

The introduction outlines the background of the problem under study, issues related to the problem, and research reviews are done before by other researchers relevant to the research. Provide adequate background or context (problem and significance) of the study. Subjects may not be written broadly. It is hoped that the reasons or objectives of the study (gap analysis), general and specific objectives, and hypotheses (if any) must be clearly stated. Present a clear "state of the art" about the subject, which discusses the literature and its theoretical concepts. A brief general background can be included in the article. Present at least 5 (five) recent related works to support the novelty of research. Successive quotes are in parentheses[3].

Manuscripts must be submitted in grammatically correct English using standard American English for the benefit of the readers, reviewers, and editors. per our policies, to improve the quality of journal articles, we require authors to perform English editing (proofreading) services with our partner(s) if the paper is accepted for publication[4], [5].

The introduction must explain the context/object of research and why this research is important. It must focus in accordance with the scope of the title. Authors must include the existing research gap, explaining the unique differences from this study compared to similar previous studies. Authors should cite at least six recent papers closely related to the title of the paper to show the research gap. The research objectives/contributions of the manuscript must be written explicitly. **[Font: Times New Roman 11 point] [All Justify Paragraphs]**

II. RESEARCH METHOD

Describe briefly the material and methods used in the study, including the subjects/materials studied, the tools used, the experimental design or design used, the sampling

technique, the variables to be measured, the data collection techniques, and analysis and statistical models used. Provide sufficient detail to allow work to be reproduced by independent researchers. Methods that have been published must be summarised and shown by reference. If quoting directly from a previously published method, use quotation marks and the source. Any modifications to the existing method must also be explained. Show observed participants, including demographic data, number of respondents, reasons for selecting respondents, etc. Describe the design of the experiment, such as the experimental procedure, surveys, interviews, observational characteristics, etc. Write a full research procedure. Make sure that the explanations made in the article will allow other researchers to reproduce the work, or make future work. Consecutive quotes are in parentheses[6].**[Font: Times New Roman 11 point]** **[All Justify Paragraphs]**

A. Mathematical Formulas **[Consistently using one of Numbering Letters or Numbers]**

If you use Ms Word, use the Microsoft Equation Editor or MathType equation, which is written in the middle, and is given several equations starting from (1), (2) etc.

$$a \ x \ b = c \qquad\qquad (1)$$

All images that you include in the document must be adjusted in order so that it makes it easier for reviewers to examine the meaning of the images.

Fig 1. Cover Journal INTENSIF **[Font: Times New Roman 11 point]**

B. Table **[Consistently using one of Numbering Letters or Numbers]**

All tables that you enter in the document must be adjusted in order so that it makes it easier for reviewers to examine the meaning of the image.

III. RESULT AND DISCUSSION

Discussion of the results of research and testing obtained are presented in the form of theoretical descriptions, both qualitatively and quantitatively[7]. The results of the experiment should be displayed in the form of graphs or tables. Charts can follow the format for diagrams and pictures. Write the results in a logical order. Results with important findings must be present first. When presenting results in a table or figure, don't repeat all of that content in the text. Only present text summaries. Describe only the new and important aspects of this research. Don't repeat all information from the results section or any of the above. Limitations of current research. Write a new or unsolved problem for future research. This section consists of information about what / how the data presented is produced; there is no raw data that must be presented in the article. The data generated is presented in a table or figure with an explanation of what the results/findings of the work. This section also needs to discuss the relationship between findings and basic concepts or hypotheses previously made. The author must also reveal whether there are necessary arguments related to the work of other researchers. Write down the implications made by work related to theory or application. Successive quotes in parentheses[8] (Quotes using Mendeley with IEEE Format). **[Font: Times New Roman 11 point] [All Justify Paragraphs]**

IV. CONCLUSION

The contents of the conclusions are answers to the objectives of the study, not a summary of the results of the study. Conclusions and suggestions are made briefly, clearly and concisely based on the results of the study. Conclusions and Suggestions are paragraphs without numbering. The conclusion must be related to the title and purpose of the study. Don't make statements that are not adequately supported by your findings. Write down the improvements made in the field of industrial engineering or science in general. Don't make further discussions, repeat abstracts, or list the results of the research results. Don't use bulleted points; use paragraph sentences instead. Successive quotes are in parentheses (Quotes using Mendeley). **[Font: Times New Roman 11 point] [All Justify Paragraphs]**

Author Contributions: *[First Author]*: Conceptualization, Methodology, Writing - Original Draft, Writing - Review & Editing, Supervision. *[Second Author]*: Software, Investigation, Data Curation, Writing - Original Draft. *[Third Author]*: Investigation, Data Curation. (A short paragraph specifying the author's contributions must be provided. Please use the CRediT taxonomy to write this part) **– this statement is mandatory**.

All authors have read and agreed to the published version of the manuscript.

Conflicts of Interest: The authors declare no conflict of interest. / The authors declare the following financial interests/personal relationships which may be considered as potential competing interests: [First Author] reports financial support was provided by [Sponsor name]. [First Author] report a relationship with [Sponsor name] that includes: employment. No other potential conflict of interest relevant to this article was reported. / First Author is member of Editorial Teams, but had no role in the decision to publish this article. No other potential conflict of interest relevant to this article was reported. – **this statement is mandatory.**

Data Availability: Your statement should explain the accessibility of the data and/or source code that underlie the results presented in your paper. If it is stored in a repository, please provide hyperlinks whenever possible. In cases where it cannot be openly shared, such as for the protection of study participant privacy, it is essential to explain this restriction clearly. – **this statement is mandatory**

Informed Consent: There were no human subjects. / Informed Consent was obtained, and a detailed explanation was presented in the Methods section. / The consent cannot be obtained; *Providing an explanation is necessary, and the text should include a description of an alternative process that has received ethical approval and should be followed.* – **this statement is mandatory.**

Animal Subjects: There were no animal subjects. / This research involved animal subjects and it complies with ARRIVE guidelines. / This research involved animal subjects but did NOT comply with ARRIVE guidelines, *Kindly provide a rationale for why your research did not adhere to the ARRIVE guidelines.* – **this statement is mandatory.**

ORCID: – **this statement is mandatory**

Second Author: http://orcid.org/0000-0000-0000-0000
Third Author: http://orcid.org/0000-0000-0000-0000

REFERENCES

We suggest there should be at least 30 references within the manuscript. Make sure you use Mendeley feature in Microsoft Word for handling citation in manuscript. Please use IEEE Journal standard for Reference style in Mendeley. References may not include all information; please obtain and include relevant information. Title of paper with only first word capitalized. Do not combine references. There must be only one reference with each number. Please include DOI information if applicable.
