

■CNFT Learn to Earn Project

<The following is a list of possible tasks for the proposal>

After translating documents related to ATALAPrism, a decentralized digital ID solution, into a form that can be learned, the question is how to disseminate it and how to train engineers to build the solution. One of the ways to solve this problem is to develop engineers who can build the solution. This project is one of the ways to solve this problem.

<Outline of the project>

This project is a reward-based learning program, which means that CNFT can be obtained as a reward for completing the learning.

Specific roadmap

In designing the route to access the document, we will use NFT, which is currently a catchy topic, as a keyword. In addition, by using influential celebrities and famous artists in the real world, we will be able to raise the level of attention by setting CNFT as a reward.

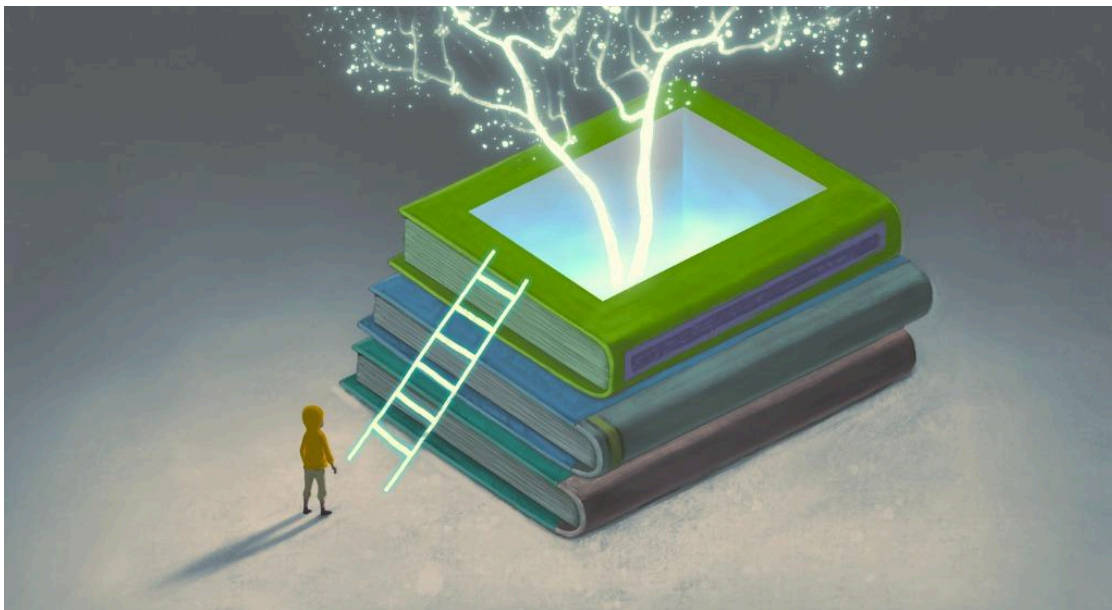

⇒**Partnership 1: "cNFT is community"**

If we can transmit information to NFT-friendly targets using the NFT platform as a starting point, a synergistic effect can be expected on the recognition and diffusion of CNFT.

⇒**Partnership 2: "Soudan.NFT"**

In the engineer development approach, it is desirable for engineers to be able to concentrate and disseminate information from a DAO-like platform.

⇒**Partnership 3: "Japan DAO Association"**

■Partnership

1.cNFT is Community

Operator: Yunya 🧑🏻♀️.

twitter account: @BLUSTYURI1

This community is dedicated to promoting CNFT and contributing to the Cardano ecosystem. They proposed the Larne to Earn project for CNFT this year. We are currently working on a CNFT auction as a collaboration project with a famous influencer. We are also capable of using the media for publicity, and are currently working on effective means of publicity. In addition to this proposal, other projects are in progress.

2. Soudan.NFT

SoudanNFT

[About](#) [japanese-blog](#) [Discord](#)

A global platform for NFT creators, DAO, is currently working on a collaboration project that will include CNFT works on the page. We are also planning to advertise our Learn to Earn project on the page to expand our reach to the NFT community. In addition to Opensea and ETH, additional measures to attract and promote CNFT can be implemented in the future.

A DAO platform that invites engineers to participate in projects. We are in the process of listing the Caradano Project in this association, which is a platform that attracts engineers without being tied to a single chain, and we have high expectations for increased engagement. We plan to post AtalaPrism's information as an educational material on the platform and also direct them to our Learn to Earn page. In addition, if the proposal is successful, we are also preparing to use the platform to launch a project team of engineers and start the project as soon as there is an opportunity to build a Cardano solution. We have already received a large number of requests to build Cardano, and I am keeping the client waiting. We will move forward with this project as soon as possible.
