

For the past six months I have been directing my efforts to becoming a web developer. This is because I realised that through my hobbies and what I enjoy to do with my spare time, I had built up skills that would be useful in the web world.

My skills vary between hardware and software; building servers, workstations and custom PCs, and also working with the hobbies electronics like Arduino and Raspberry Pi.

Recently I have been improving my HTML, JS and CSS skills. I have enjoyed learning CSS and SCSS/SASS as using SASS allows you to save a lot of time and keep the code clean.

I look forward to working in a team with more experience in the field so I can learn faster, I feel like my skill level is at a point where working in a team would be very beneficial.

My skills

IDEs	Markup Language	Style sheet language	Programing languages	Framework	Worked with	Learning assets	Good people to follow
atom	HTML	CSS	JavaScript	Angular Js	MySQL	https://dribbble.com/	SCOTT HANSELMAN
visual studio	XML	SASS	Python	Bootstrap	Arduino	https://www.lynda.com/	Jeffrey Taylor
aptana	xhtml		Visual Basic	React	Raspberry Pi	https://stackoverflow.com/	Derek Banas
			C++		Cisco Systems catalyst 2960 NS	https://stackexchange.com/	Lynn Fisher
			SQL		Ubuntu Server 18.04	https://github.com/	Gordon Zhu
			PHP		ramnode SSD VPS Servers	http://nicholasjohnson.com/blog/angularjs-step-by-logical-step/
