Parent and student access to PVUSD usernames and passwords

(last updated 6/12/2024)

When a new student is enrolled (either within or from out of district), the student and parent (and their contact email) are entered into Infinite Campus (IC) as part of the registration process.

Once the parent and student information is in IC and after an overnight sync...the student and parent accounts and passwords will be created.

Step 1:

Parent retrieves his/her IC account information: Visit portal.pvschools.net and select "forgot username" then do the same for "forgot password". The information will be emailed to the email address you provided to the district when enrolling your student.

Step 2:

Parent views/retrieves student username and password (found under *More*)

Step 3:

Parent supplies student with username and password to access PVUSD accounts via auth.pvschools.net

Now that parents have access to their own IC account… they can see information on their child/children - attendance, grades, passwords, etc. If a parent has more than one child - please choose from dropdown to access one child at a time.

Once student has access to username and password...student can log into the auth.pvschools.net portal, which will give access to all PVUSD applications available to that student (email, course materials, etc.)

When the student accesses his/her GSuite (via the auth portal link)... the student will be taken to his/her pvlearners.net email account. By clicking on the 9-dot application icon...the student will see all GSuite tools available - including Google Classroom. By clicking on Google Classroom - the student will see any/all Google classrooms available. Additionally, in the pvlearners.net email students may receive additional information on their Google Classrooms from their teachers with information on how to join/access.

***NOTE: New students to PVUSD - student accounts will not be activated until two days before the first day of school attendance. While parents can retrieve passwords, students will be unable to login until two days before they actually start.
