ZeroTouch Review: Can it really help you with making a lot of money

When this COVID-19 thing was declared a Pandemic, I knew it is going to be bad for the economy and a lot of businesses are going to fail because of the new problems this Pandemic will bring.

But I knew where there are problems, there are opportunities.

So I have been looking for solutions that can help the failing businesses while we make a profit.

There were a few products coming up. But none was powerful enough to make a lasting impact.

Then I came across ZeroTouch.

The sales copy and descriptions seemed to be good.

Their features were also very powerful.

But such a low price made me think about the product quality.

So I decided to sign up for the product to see how it is working before I promote it to my audience.

After using the product and testing out its features, I am writing this review to guide you better. So read on…

As soon as you login to ZeroTouch, your dashboard will open up where you can find all the necessary numbers and analytics.

ur Summary

The User Interface is really clean and easy to use.

Just by looking at the home screen, and menu options, you will automatically know what to find where.

But in case you get stuck anywhere, there is a help option on the top left!

The menu options are where the magic happens.

## So let's look at them one-by-one:

1. Snapshot:

Snapshot is really your dashboard, or your home screen.

No matter where you are, if you click on the snapshot, you will be pulled back to the dashboard.

All the necessary data you or your client might need will be displayed here so you can easily track the growth!

2. Catalog

Then there is this Catalog option where you can add your products and product categories.

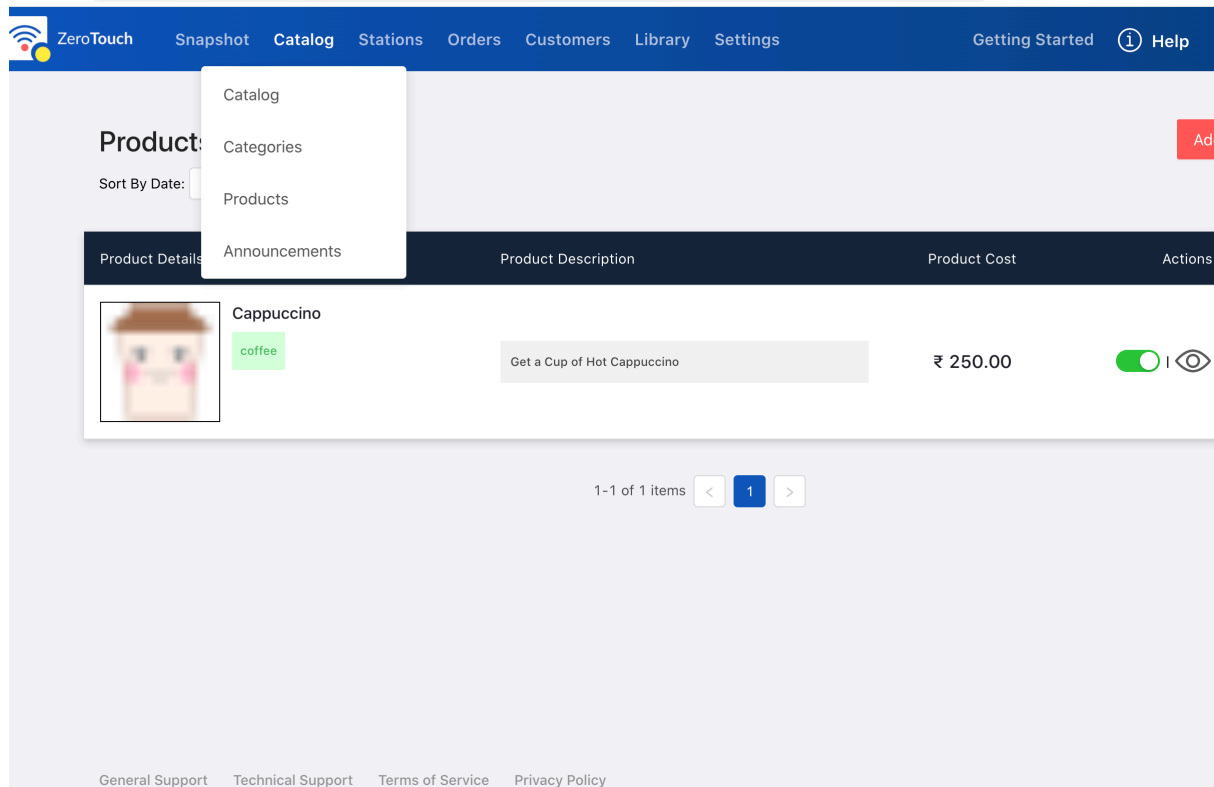

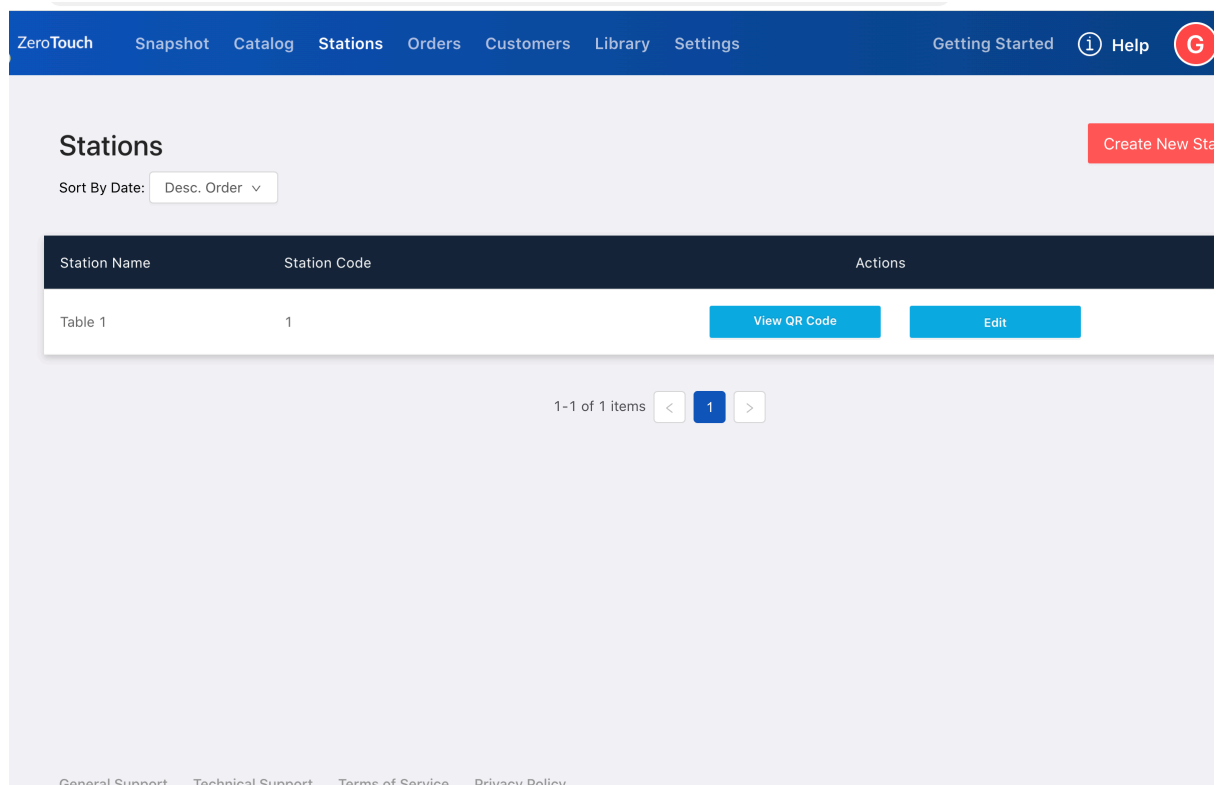

This is the place where you can upload the menu, or the products of your clients that will be linked with your scannable QR code.

So whenever a customer arrives, all he has to do is scan this code and place the order. His order will show up inside your client's account from where he can fulfil it.

3. Stations

The Station option is a little hard to understand when you first look at it.

But all it does is that it gives you an ability to generate multiple QR codes for the same catalog.

Stations

Sort By Date: Desc. Order ∨

Station Name	Station Code	Actions	
Table 1	1	View QR Code	Edit

Create New Sta

1-1 of 1 items   ‹   1   ›

So let's say your client is a restaurant owner. He receives several customers at once.

All of them scan and pay, and now they are waiting for their orders.

But how will your client know who ordered what?

To solve that problem, you can have several QR codes for different spots, tables, or rooms.

Whenever someone will scan the code, your client will know from which spot it was scanned. Hence, he can directly deliver the order there.

Ability to have location specific codes is just awesome!

4. Orders

Under orders you can see all the current orders.

The business owner can also see if the order is still pending or if it has already been fulfilled.

"

The business owner will also be able to see if the order was already paid online by credit card or paypal.

Or if it has to be paid in cash.

Once the cash is paid, just click on "Mark as Paid".

Under the "Orders" option you can also see from which spot (station) the order was booked, hence you know where to deliver it.

And, of course, what was ordered will also be displayed to the business owner.

Customer name and phone number is also mentioned there, just in case…

5. Customers

Here you can access all your data for all the customers you've had in the past.

There are many things you can do with this data later on...what you do with it is on you.

ZeroTouch does have a few features as an add on that you can use to market to these customers later on!
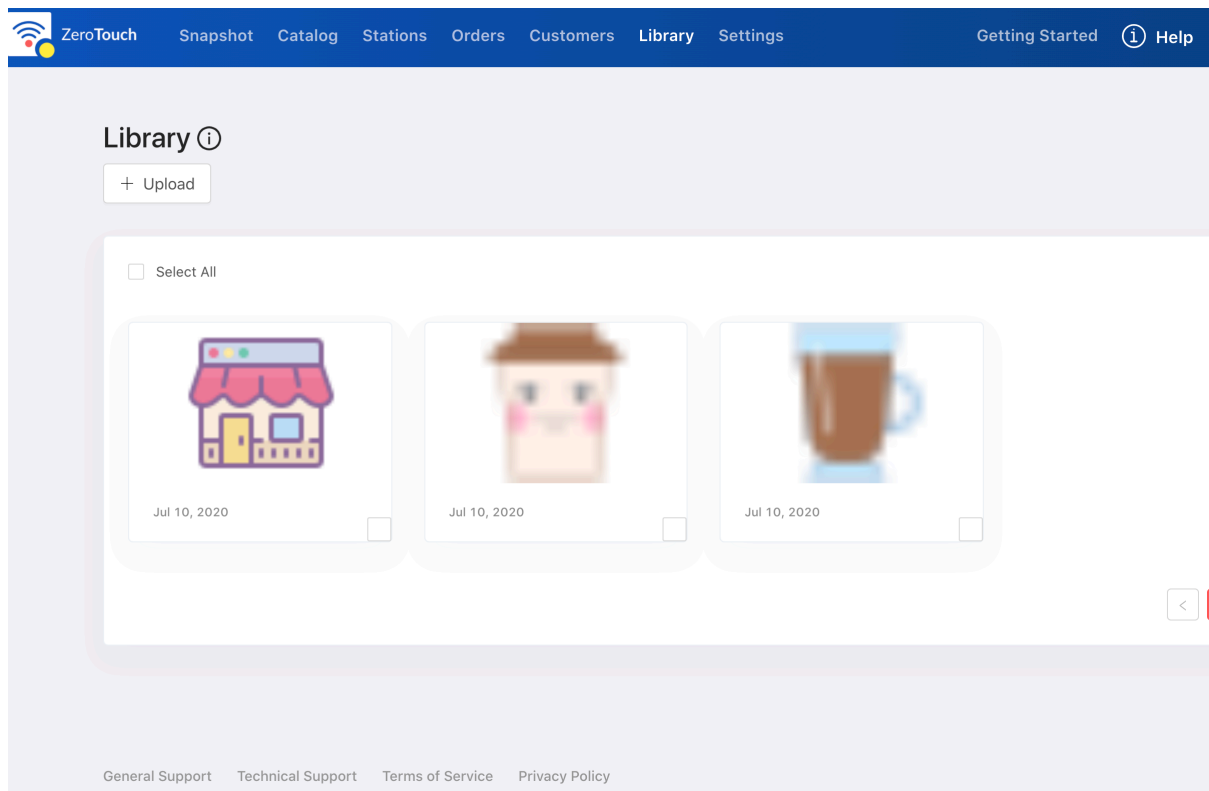

You can remove the customers by clicking on "remove customer".

Though there is no option to add any customer manually. I think that option is not needed anyway!

Maybe a downside is that you cannot import the customer list!

6. Library

Library option is just there to save your important pictures, so you don't have to upload the same image again and again.
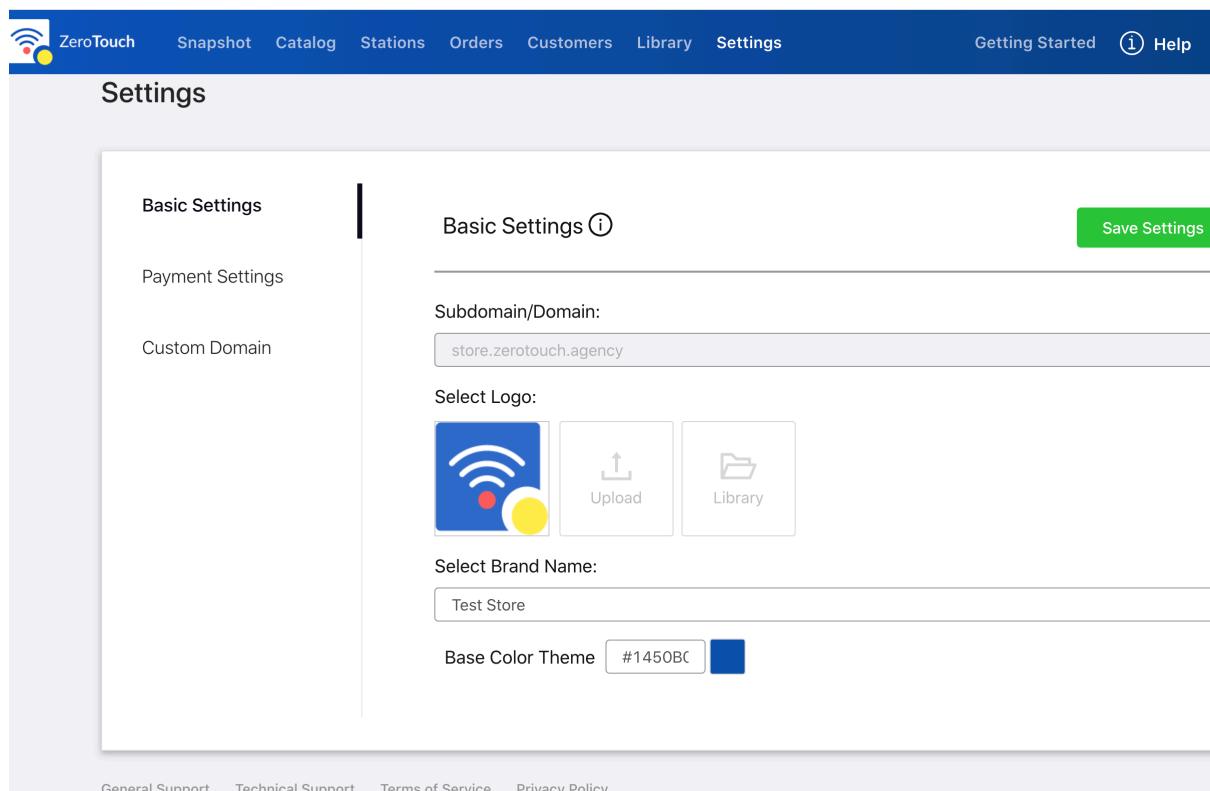

You can add or delete images from here but it's not really an important option.

You'll understand its usage once you start using ZeroTouch!

7. Settings

Under settings you have 3 further navigation options - Basic Settings, Payment Settings, Custom Domain.

Inside basic settings you have all the necessary options for whitelabeling this product.

You can add your logo, brand name, and brand color from here!

Then under payment settings, you can connect PayPal or Stripe accounts.

And finally, under custom domains, you can link your domain name.

Conclusion:

I think ZeroTouch is a powerful product with a really simple and user friendly design. And I see a potential for anyone to make a lot of money using this tool.

All you pay is a one time fee to get ZeroTouch and you can keep charging your clients every month. I can already imagine the huge profits that it can bring. You can probably earn back what you pay for this product for less than half of the money you'll earn from your 1st sale.

And I definitely know this can be sold very easily because nothing like this exists in the market, and the market has been looking for something like this product...but it just didn't exist.

Article 2:

How To Capitalize On COVID-19 And The Current Market Situation?

The biggest problem this world is facing today is COVID-19.

People are stressed out.

Hardly anyone is stepping out of their homes.

Businesses are finding it hard to survive...and they are laying off their employees to keep breathing.

So, what is the solution to these problems?

As entrepreneurs, we are always looking for solutions. Especially how we can earn a profit while solving problems for others?

And I have found something that will help you with capitalizing on the current market situation.

If you are following the news, you must be hearing about following the social distancing norms.

Businesses are being forced by the government to follow social distancing.

But it is not very easy for the store owners, restaurants and mom-and-pop shops to follow social distancing very effectively.

The primary reason is that the problem is so new that no one has come up with a working solution yet.

If you have to sell your product, you have to exchange the cash, ask for the order, and deliver it to your customer at the counter!

But how are you going to do it all while maintaining a 6-feet distance?

You see? It's not so easy!

So we decided to find a solution to this problem...

...and we did find a solution!

It's a new innovative product called ZeroTouch.

ZeroTouch helps Freelancers, marketers, agencies, and consultants to whitelabel their solution at a small one time fee and then bring that solution to the market.

The solution is to help the small businesses, shops, and restaurants to follow social distancing in a better and more effective manner.

ZeroTouch allows you to build a Scannable QR code for small businesses.

They can later ask their customers to scan the code and order the products without having a direct contact with the store owner, waiter, or store attendant…

This also helps with containing the spread of coronavirus without limiting day to day shopping activities!

All you have to do is find a small business, shop, or restaurant. Tell them about this amazing service you provide. Close the deal. Do the set up inside ZeroTouch (of course with your logo and branding inside it). And finally, deliver the service to your client.

How It Works?

Its working can largely be divided into 3 steps:

STEP #1: Add your client's products and add-ons

STEP #2: Download the Scannable Code

STEP #3: Deliver it to your client
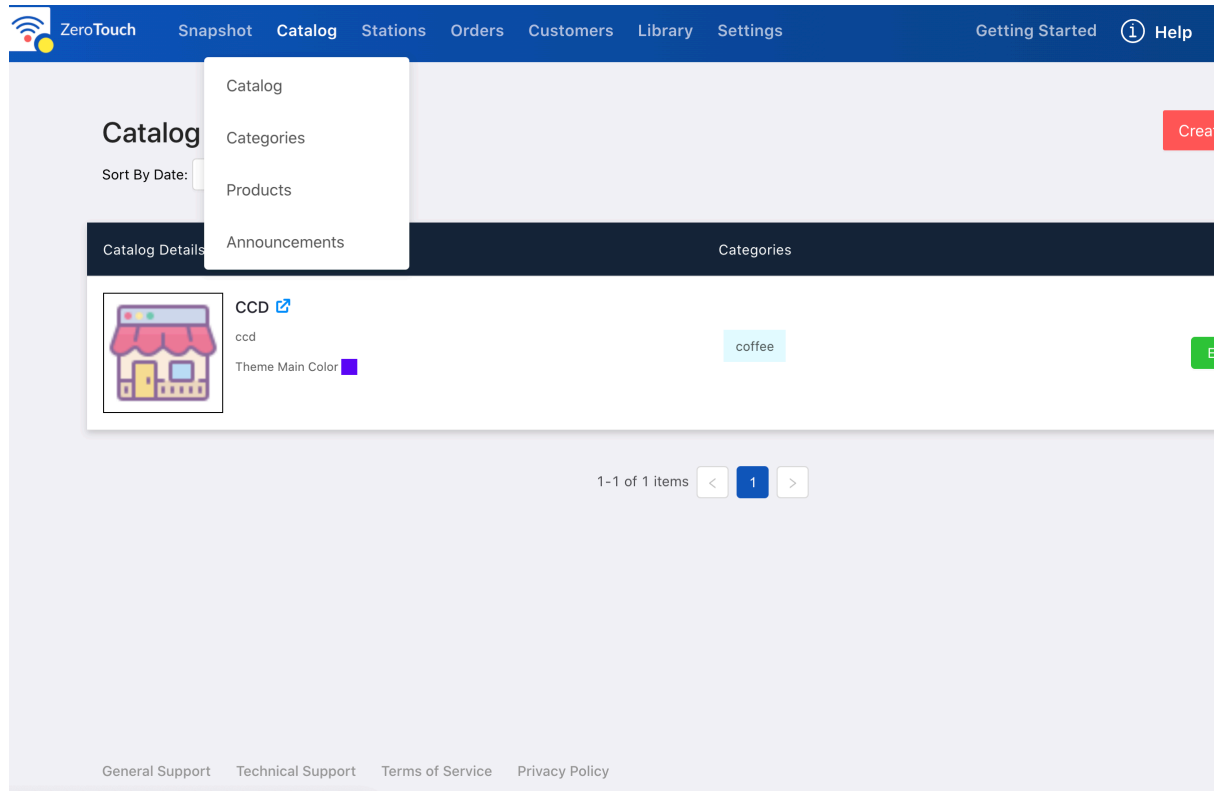

Now let's break these steps down:

STEP #1: Add your client's products and add-ons

So once you have closed the deal and you have a client, most of your work is already done.

ZeroTouch is made in such a way that the setup process is really very easy.

You can even hire a VA to do it for you.

So without wasting any time, go into the "Catalog" option.

Create a catalog. It is just a few details and an image.

Once you are done, hover over the catalog option and go into the "Products" option and click on "Add Product".
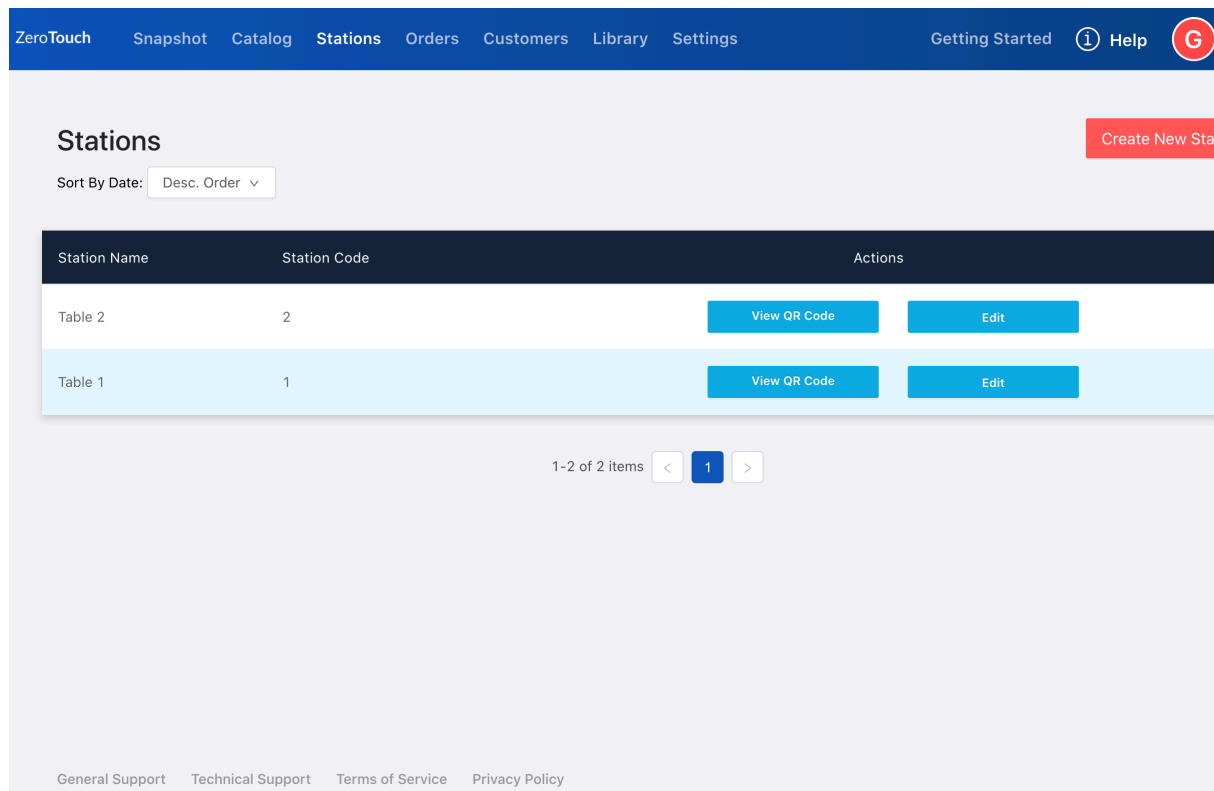

This is where you will have to add your client's products and its details one-by-one.

Then move to the step #2!

STEP #2: Download the Scannable Code

Now to Download this QR code, you will have to click on the "Stations" option.

Here you can create a new station and get your QR code by clicking on "View QR Code".

That is what you have to download and deliver to your client.

The code will automatically be linked by your catalogs, so you don't have to worry about that.

Another good thing about Stations feature is that you can generate multiple QR codes for different spots.

What if someone orders from table number 9? How is your client going to know?

Well, in the station feature, you can create a new station called "table no. 9" and then ask your client to put that code on table 9.

When someone scans the code from table 9, your client will see it on his dashboard!

STEP #3: Deliver it to your client

After all the setup is done, all you have to do is deliver the account to your client.

Under the "Snapshot" option, you and your client can see how ZeroTouch is impacting their business in a positive manner.
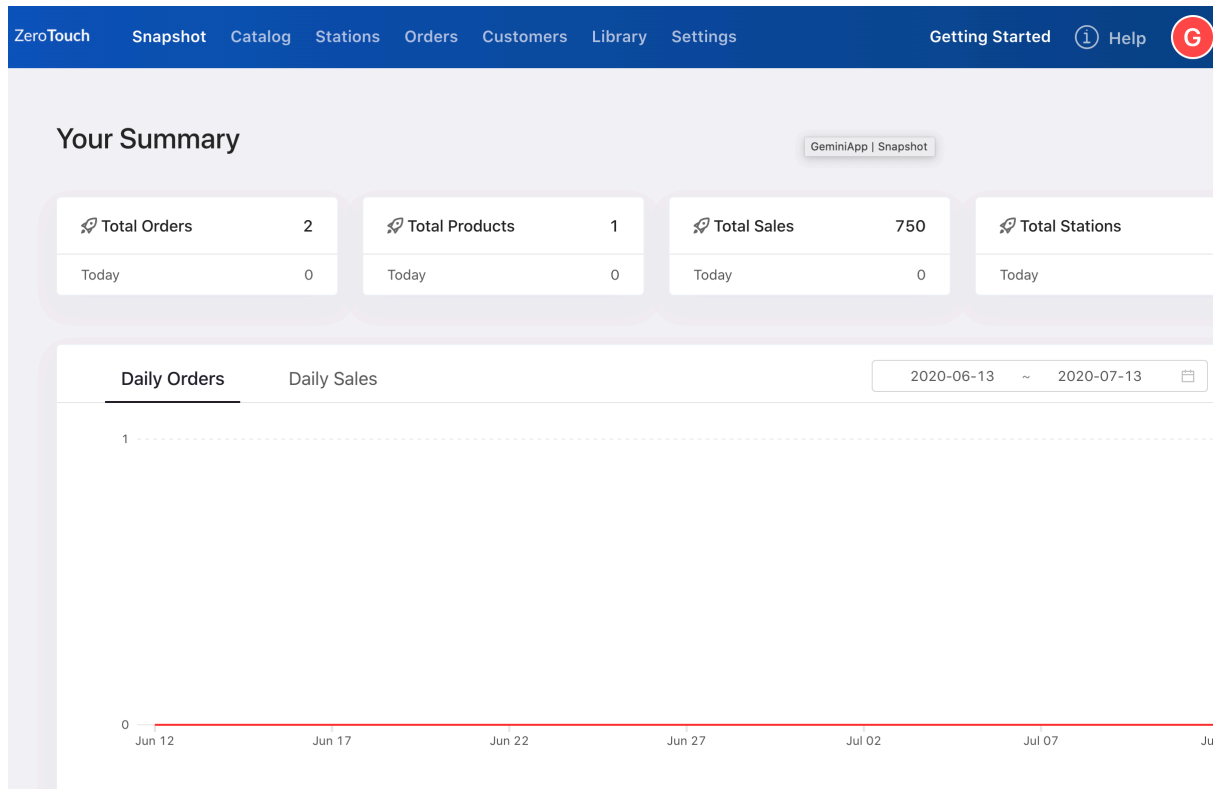

Under the orders section, your client can see all the pending as well as fulfilled orders.

Now that you know briefly how ZeroTouch works, let's discuss the Pros and Cons of ZeroTouch:

The Good:

- It's easy to use for non-techies
- Fast and Bug-free
- Fully-customizable
- No Programming Knowledge required
- Under "Getting Started" and "Help" options, all the necessary information is available to get you started

The Bad:

- Some of the features are hidden behind the up-sells (but the tool is still worth it, even without them)!
- I really tried hard but couldn't find anything else that is bad about ZeroTouch!

The Awesome:

- The Dashboard is really amazing with displaying all the necessary data.

- It is not hard to sell to the local businesses because this is what they need the most at this point.
- And it's TOO simple to use!

The Ridiculous:

It's the price! Yes, the price is just ridiculous. I don't know why they are not charging more, maybe they will start charging more pretty soon.

But for now, the product sells for $47. It's a lifetime deal, you pay $47 once, and the tool is yours forever! It also comes with a 30-Day Refund Guarantee so you can try the tool Risk-Free for 30 days and see if it's really effective.

I don't know if a better deal exists in the market that can make you so much money!

Article 3:

ZeroTouch Review: A Tool For The Post COVID World Or A Scam?

For the last few days, I have been trying this new tool called ZeroTouch.

They claim that you can earn a lot of money by whitelabeling their solution and bringing it to the local small businesses.

They offer a way to capitalize on the current market situation and COVID-19. And they are selling it at a ridiculously low price.

Let's try to dig a little deeper into this.

Q: What is ZeroTouch?

A: ZeroTouch is an innovative software that helps small businesses, stores, and restaurants receive and deliver orders seamlessly while practicing social distancing.

And right now, you have an opportunity to whitelable this product and sell it to the local businesses at any price you want.

Q: How does ZeroTouch work exactly?

A: Here is how it basically works:

STEP #1: Add your client's products and add-ons

STEP #2: Download the Scannable Code

STEP #3: Deliver it to your client

Whenever someone will scan the barcode from their phone, all the products will display on their screen from where they can choose and pay for the order.

Your client will receive the order on his dashboard that he can directly deliver it to his customer's seat or waiting table!

You see? There is no cash exchange, no order taking, nothing.

Just scan, pay, and receive your order!

This will enable businesses to follow all the social distancing norms without any headache!

# Now let's break down the steps:

STEP #1: Add your client's products and add-ons

So once you have closed the deal and you have a client, most of your work is already done.

ZeroTouch is made in such a way that the setup process is really very easy.

You can even hire a VA to do it for you.

So without wasting any time, go into the "Catalog" option.

Create a catalog. It is just a few details and an image.

Once you are done, hover over the catalog option and go into the "Products" option and click on "Add Product".

This is where you will have to add your client's product and it's details one-by-one.

Then move to the step #2!

STEP #2: Download the Scannable Code

Now to Download this QR code, you will have to click on the "Stations" option.

Here you can create a new station and get your QR code by clicking on "View QR Code".

That is what you have to download and deliver to your client.

The code will automatically be linked by your catalogs, so you don't have to worry about that.

Another good thing about Stations feature is that you can generate multiple QR codes for different spots.

What if someone orders from table number 9? How is your client going to know?

Well, in the station feature, you can create a new station called "table no. 9" and then ask your client to put that code in table 9.

When someone scans the code from table 9, your client will see it on his dashboard!

STEP #3: Deliver it to your client

After all the setup is done, all you have to do is deliver the account to your customer.

Under the "Snapshot" option, you and your client can see how ZeroTouch is impacting their business in a positive manner.
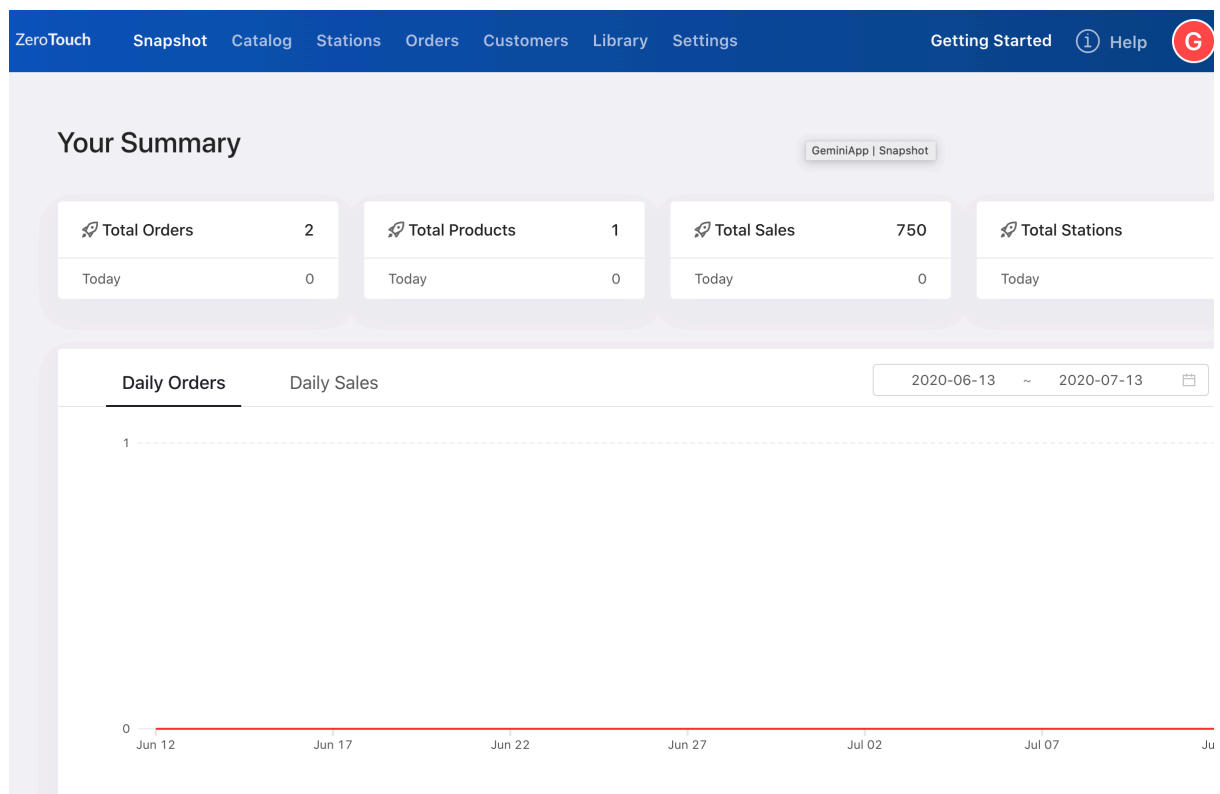

Under the orders section, your clients can see all the pending as well as fulfilled orders.

The Good, The Bad, The Awesome:

The Good:

- It's easy to use for non-techies
- Fast and Bug-free
- Fully-customizable
- No Programming Knowledge required

- Under "Getting Started" and "Help" options, all the necessary information is available to get you started

The Bad:

- Some of the features are hidden behind the up-sells (but the tool is still worth it, even without them)!
- I really tried hard but couldn't find anything else that is bad about ZeroTouch!

The Awesome:

- The Dashboard is really amazing with displaying all the necessary data.
- It is not hard to sell to the local businesses because this is what they need the most at this point.
- And it's TOO simple to use!

The Ridiculous:

It's the price! Yes, the price is just ridiculous. I don't know why they are not charging more, maybe they will start charging more pretty soon.

But for now, the product sells for $47. It's a lifetime deal, you pay $47 once, and the tool is yours forever! It also comes with a 30-Day Refund Guarantee so you can try the tool Risk-Free for 30 days and see if it's really effective.

Q: Why do I need ZeroTouch?

A: The market is really stressed out nowadays due to COVID-19, the lockdown and everything else that is going on.

Businesses are on the verge of collapse.

They have been looking for a solution like ZeroTouch, but there was no similar product in the market.

Now that it is here, you can sell this solution as your own product to an already interested market.

ZeroTouch gives you an opportunity to earn money while serving those in need!

You need ZeroTouch so you can capitalize on this opportunity before it is too late.

I don't know if a better deal exists in the market that can make you so much money!
