

Created 5/30/2019 EF

List of metadata considerations related to functionality:

**Work type:** Student research (ETDs, projects)

### **Fields not listed in Hyrax**

- There are 3 fields listed on the spreadsheet that are not in Hyrax; are these relevant to theses? (Or can be added to an “additional fields” section?)
  - Copyright date
  - Spatial Coverage
  - Temporal Coverage
- Issue regarding the **Publisher** element disappearing: [Still displays in records](#) that were created when the element was present, but when you go to edit the item the field is not in the workflow
- Possible to add an **Extent** element? We have a lot of ETD’s that have multiple files associated and it be helpful (especially because of the display in Hyrax) to have an extent field

### **Revisions/Corrections/etc.**

#### **Element:** Advisor

- Metadata IG discussed using a controlled list as we are now NACO members and can contribute name authorities (no workflow established for adding names, considerations include timeline for having authorities approved and updating associated/legacy records)
  - Questions:
    - Could a LCNAF search field be added later, if this is maybe a post-migration project? (Or could it be included now, but have the element “turned-off”/hidden until a process is in place?)
    - Request field for ORCID IDs for creator/contributor (Fullerton requires authors to sign up for ORCID in order to deposit)
- **Is no longer facetable in Production site**

#### **Element:** Creator

- Controlled vocabulary: See above (same questions relating to adding an ORCID; could this be done post-migration?)

#### **Element:** Committee Member

- Same consideration regarding using LCNAF/ORCID and whether this is post-migration project
- **Is no longer facetable in Production site**

**Element:** Campus

- Is listed with the primary work metadata on the [display page](#), and also under Relationships - **only facetable under the Relationships section**

**Element:** College

- List in production site is displaying Department list
- Discussed making this NR
- Is repeatable in Hyrax if you press CTRL while making your selections
- **Is no longer facetable in Production site**

**Element:** Department

- Is repeatable in Hyrax if you press CTRL while making your selections
- **Is no longer facetable in Production site**

**Element:** Degree level

- Currently repeatable in Hyrax (noted that you are working on making this NR)
- Currently free text in Hyrax; Vocabulary sent to MD IG for review
- **Is no longer facetable in Production site**

**Element:** Degree Name

- Had discussed making this NR, however there are 13 dual degree programs across the CSUS; sent to MD IG for review
- **Is no longer facetable in Production site**

**Elements:** Date available, Date issued, Date submitted

- Are these going to be system-generated?
- What is the difference between date issued, date submitted, and date available?
- Date issued is currently repeatable in Hyrax
- At CSUS, date issued reflects date published (following dc terms) ie the date published to ScholarWorks and is system generated
- Noted that KC is working on formatting

**Element:** Keyword

- Make optional as this will be going away in Hyrax 3, but is still relevant to legacy records (per mtg 5/24/19)

**Element:** Resource type thesis

- Change label to read "Resource type"
- Is repeatable in Hyrax if you press CTRL while making your selections

---

**Work type:** Research data (Datasets, models, software, etc.)
