BRIEF BIOGRAPHY

Dr. James Weimer is an Assistant Professor in the Department of Computer Science (primary) and Department of Biomedical Engineering (secondary) in the College of Connected Computing (CCC) at Vanderbilt University (since August 2022), where he directs the Internet of Medical Things (IoMT) Lab. He is affiliated faculty for the Institute for Software Integrated Systems (ISIS) and the Vanderbilt Institute of Surgery and Engineering (VISE). He serves as the executive director for the Vanderbilt Medical Makers and the Medical Device Club @ Vanderbilt. Dr. Weimer was previously (August 2016 to August 2022) an Assistant Research Professor of Computer and Information Science (CIS) at the University of Pennsylvania (Penn). Dr. Weimer earned a PhD in Electrical and Computer Engineering (ECE) from Carnegie Mellon University (CMU) in 2010, where he worked with Prof. Bruce Krogh and Prof. Bruno Sinopoli, and earlier earned an MSc in ECE at CMU in 2007 and a BSEE from Purdue University in 2005.

His research interests include the design and analysis of learning-enabled cyber-physical systems with application to the internet-of-medical things and safe autonomy. Specifically, he aims to develop tools and techniques to address challenges arising from real-world data constraints including unmodeled variability, dataset shifts, anomalies, and limited sensing. Dr. Weimer has over 90 publications and won best paper awards at ACM/IEEE ICCPS 2014, IEEE CPSNA 2016, ACM/IEEE MEMOCODE 2019, and ACM TECS 2022. In addition, Dr. Weimer's work has been designated as a BreakThrough Device by the FDA (2021) and earned a TIME Magazine Best Invention award (2022). Dr. Weimer's research has been and remains supported by DARPA, ONR, ARO, NSF, NIH, and Hillrom (now Baxter), totalling over $30 million in sponsored research projects (over $3.3M as PI). He serves as an associate editor of the ACM Transaction on Cyber-Physical Systems and ACM Transactions on Computing for Healthcare. He has co-founded two medical device startups: Neuralert Technologies and Vasowatch.

EDUCATION

2010 **Ph.D. in Electrical and Computer Engineering,** Carnegie Mellon University, Pittsburgh, PA
Dissertation: ``Large Scale Multi-Source Detection Using Wireless Sensor Networks"
Co-Advisors: Prof. Bruce H. Krogh and Prof. Bruno Sinopoli
Committee: Bruce H. Krogh, Bruno Sinopoli, Jose Moura, Raj Rajkumar, Mitchell Small

2007 **M.S. in Electrical and Computer Engineering ,** Carnegie Mellon University, Pittsburgh, PA
Dissertation: ``Modeling and Implementation of Mode Switching with Application to Failure Analysis in Steer-by-Wire Systems"
Advisor: Prof. Bruce H. Krogh

2005 B.S. in Electrical Engineering, Purdue University, West Lafayette, IN

ACADEMIC APPOINTMENTS

8/2022 - present **Assistant Professor,** Vanderbilt University, Nashville, TN 37235
Appointments: Computer Science (primary), Biomedical Engineering
Senior Research Scientist in the Institute for Software Integrated Systems (ISIS)
Faculty Affiliate, Vanderbilt Institute for Surgery and Engineering (VISE)
Director, Internet-of-medical-Things (IoMT) Lab
Director, Medical Device Club
Innovation Ambassador, Center for Technology Transfer and Commercialization

8/2018-8/2022 **Research Assistant Professor**, Children's Hospital of Philadelphia, Philadelphia, PA
Department of Biomedical and Health Informatics

8/2016 - 8/2022 **Research Assistant Professor**, University of Pennsylvania, Philadelphia, PA 19046
Computer and Information Science
Faculty Affiliate, PRECISE Center
Faculty Advisor, Penn Health-Tech
Director, Medical Device Club
Executive Advisory Board, Penn4C

11/2012 - 7/2016 **Postdoctoral Researcher**, University of Pennsylvania, Philadelphia PA, 19046
Department of Computer and Information Science
Mentor: Insup Lee

12/2010 - 11/2012 **Postdoctoral Researcher**, KTH Royal Institute of Technology, Stockholm, SE
Department of Automatic Control
Mentor: Karl Henrik Johansson

INDUSTRY POSITIONS

9/2022 - present **Founder**, Vasowatch Inc, Philadelphia, PA
- Research, development, commercialization, and consulting activities arising from our research on predicting maternal health outcomes.

5/2020 - present **Founder**, Neuralert Technologies Inc, Philadelphia, PA
- Research, development, commercialization, and consulting activities arising from our research on stroke detection.

TEACHING EXPERIENCE

Vanderbilt University

Fall 2025 **Introduction to Engineering, Computer Science Module (ES140x)**, Instructor
59 students total: about 20 first-year students each in 3 one credit hour modules taught over the semester.

Spring 2025 **Internet of Medical Things (CS 8395)**, Instructor. 40 students.

Fall 2024 **Introduction to Engineering, Computer Science Module (ES140x)**, Instructor
72 students total: about 25 first-year students each in 3 one credit hour modules taught over the semester.

Spring 2024 **Internet of Medical Things (CS 8395)**, Instructor. 42 students.

Fall 2023 **Introduction to Engineering, Computer Science Module (ES140x)**, Instructor
80 students total: about 25 first-year students each in 3 one credit hour modules taught over the semester.

Spring 2023 **Internet of Medical Things (CS 8395)**, Instructor. 19 students.

Fall 2022 **Introduction to Engineering, Computer Science Module (ES140x)**, Instructor
80 students total: about 25 first-year students each in 3 one credit hour modules taught over the semester.

HONORS & AWARDS

[Since joining Vanderbilt]

[H12] **Vanderbilt Innovation Investment Awardee.** Vanderbilt Innovation Investment Fund invested $300k to commercialize the VIBRANT postpartum hemmorage risk prediction algorithm licensed to Vasowatch, Inc. (See [C32] in Publications and [L4] in licenses)

[H11] **Best Paper Award Finalist.** *IEEE/EMBS International Conference on Body Sensor Networks (BSN '24) for the paper* "Raproto: An Open-Source Platform for Rapid Prototyping with Wearable Devices". (See [C31] in Publications)

[H10] **Best Paper Award Finalist.** *ACM/IEEE International Conference on Cyber Physical Systems (ICCPS '24) for the paper* "Curating Naturally Adversarial Datasets for Learning-Enabled Medical Cyber-Physical Systems". (See [C30] in Publications)

[H9] **NSF CAREER Award.** "Learning-enabled Medical Cyber-Physical Systems". National Science Foundation (NSF). Award number: 2339637.

[H8] **TIME Best Invention**. Stroke detection technology, licensed to Neuralert, named a 2022 Best Invention by TIME Magazine in medical care category (See [L2] in Licences)

[Prior to joining Vanderbilt]

[H7] **Best Paper Award**. *ACM Transactions on Embedded Computing Systems (TECS)' 22 for the paper "*Verifying the Safety of Autonomous Systems with Neural Network Controllers." See [J15] in Publications.

[H6] **Breakthrough Device.** US Food and Drug Administration designated stroke detector (license to Neuralert) as a breakthrough device (2022).

[H5] **Best Paper Award Finalist**. *IEEE/ACM Conference on Connected Health: Applications, Systems, and Engineering Technologies (CHASE '21) for the paper "*RT-ACL: Identification of High-Risk Youth Patients and their Most Significant Risk Factors to Reduce Anterior Cruciate Ligament Reinjury Risk." See [C27] in Publications.

[H4] **Best Paper Award**. *ACM-IEEE International Conference on Formal Methods and Models for System Design (MEMOCODE'19) for the paper* "Detecting Security Leaks in Hybrid Systems with Information Flow Analysis." See [C18] in Publications.

[H3] **Best Paper Award**. I*EEE International Conference on Cyber-Physical Systems, Networks, and Applications (CPSNA'16) for the paper* "Adaptive Transient Fault Model for Sensor Attack Detection". See [OC13] in Publications.

[H2] **Best Paper Award Finalist**. 6th ACM/IEEE International Conference on Cyber-Physical Systems (ICCPS'15) for the paper "Early-Detection of Critical Pulmonary Shunts in Infants". See [C8] in Publications.

[H1] **Best Paper Award**. 4th ACM/IEEE International Conference on Cyber-Physical Systems (ICCPS'14) for the paper "Robustness of Attack-Resilient State Estimators". See [C6] in Publications.

PUBLICATIONS

Co-authors with a trailing * indicate thesis students formally advised or co-advised, with a trailing † are postdocs formally mentored, and co-authors with a trailing ° indicate students informally mentored (all at the time of publication).

Publication Summary: As of December 1, 2025, I have 118 total publications (59 in journals and highly selective conferences). Since joining Vanderbilt, I have 25 total publications (12 in journals and highly selective conferences). In the following, the distribution of publications are specified:

Publication category	Total publications	Publications since joining Vanderbilt
Journal publications	26	6
Refereed highly selective conference papers	33	6
Other refereed conference papers	21	4
Book chapters	2	0
Lightly refereed conference papers	8	4
Refereed workshop papers	8	1
Other workshop papers	3	0
Abstracts	4	0
Tutorials	3	0
Patents / patent submissions	6	2
Licenses optioned/executed	4	2

Citation metrics provided by Google Scholar (12/1/2025), with a total of 3632 citations, h-index of 28, and an i10-index of 63.

REFEREED JOURNAL ARTICLES

[Since joining Vanderbilt]

[J26] Sydney Pugh*, Ivan Ruchkin, **James Weimer**, and Insup Lee. "Evaluating Robustness of Learning-Enabled Medical Cyber-Physical Systems with Naturally Adversarial Datasets." *ACM Transactions on Cyber-Physical Systems* (2025). Vol 9. Issue 4. 1-39.
DOI: 10.1145/3734695
Impact Factor: 2.9
Summary: This paper presents an approach for evaluating the robustness of medical classifiers using adversarial examples rather than traditional epsilon measures.
Role: Mentor: originator of problem, advised on approach, edited paper.
Contribution: 25%

[J25] Sara B. DeMauro, Erik A. Jensen, Molly Passarella, Mary Catherine Gambacorta, Megan Dhawan, **James Weimer**, Sooyong Jang*, Howard Panitch, and Haresh Kirpalani. "Oxygen saturation targeting for infants with bronchopulmonary dysplasia: a pilot randomized trial." *Annals of the American Thoracic Society* 22, no. 4 (2025): 560-569.
DOI: 10.1513/AnnalsATS.202404-443OC
Impact Factor: 5.4
Summary: This paper compares the incidence of intermittent hypoxemia (IH), proportion of time with hypoxemia, and secondary clinical outcomes measured up to 6 months corrected age (CA) in infants with established BPD randomized to higher (≥96%) versus lower (90–94%) SpO2 target ranges.
Role: Mentor: designed clinical data collection system used in trial, edited paper.
Contribution: 10%

[J24] Kimberly K. Trout, Stefanie Modri, Harish M. Sehdev, and **James Weimer**. "Derivation and validation of an intrapartum algorithm to predict postpartum hemorrhage risk using photoplethysmography data." *American Journal of Obstetrics & Gynecology* 230, no. 1 (2024): S52.
DOI: 10.1016/j.ajog.2023.11.091
Impact Factor: 8.4
Summary: This paper presents the derivation and validation on an algorithm to predict postpartum hemorrhage risk using maternal heart beat timing information.
Role: Lead Technical Researcher: designed, implemented and validated algorithm, edited paper.
Contribution: 80%

[J23] Susan Kohl Malone, Austin M. Matus, Anneliese J. Flatt, Amy J. Peleckis, Laura Grunin, Gary Yu, Sooyong Jang*, **James Weimer**, Insup Lee, Michael R Rickels, and Namni Goel. "Prolonged Use of an Automated Insulin Delivery System Improves Sleep in Long-Standing Type 1 Diabetes Complicated by Impaired Awareness of Hypoglycemia." *Journal of diabetes science and technology* (2023): 19322968231182406.
DOI: 10.1177/1932296823118240
Impact Factor: 5.0
Summary: This paper presents a study that assessed changes in actigraphy-estimated sleep and glycemic outcomes after initiating automated insulin delivery.

Role: Mentor: advised on clinical decision support system used in study, edited paper.
Contribution: 10%

[J22] Amanda Watson[†], Claire Kendell[o], Anush Lingamoorthy[o], Insup Lee, and **James Weimer.** "Lumos: An Open-Source Device for Wearable Spectroscopy Research." *Proceedings of the ACM on Interactive, Mobile, Wearable and Ubiquitous Technologies* 6, no. 4 (2023): 1-24.
DOI: 10.1145/3569502
Impact Factor: 4.96
Summary: This paper presents Lumos, an open-source device for wearable spectroscopy research. Lumos can facilitate on-body spectroscopy research in health monitoring, athletics, rehabilitation, and more. We developed an algorithm to determine the spectral response of a medium with a mean absolute error of 13nm. From this, researchers can determine the optimal spectrum and create customized sensors for their target application.
Role: Mentor: originator of problem, oversaw Lumos development/testing, edited paper.
Contribution: 20%

[J21] Steven R. Messé, Scott E. Kasner, Brett L. Cucchiara, Michael L. McGarvey, Stephanie Cummings, Michael A. Acker, Nimesh Desai, Pavan Atluri, Grace J Wang, Benjamin M Jackson, **James Weimer**. "Derivation and Validation of an Algorithm to Detect Stroke Using Arm Accelerometry Data." *Journal of the American Heart Association* 12, no. 3 (2023): e028819.
*DOI:*10.1161/JAHA.122.028819
Impact Factor: 6.106
Summary: This paper presents the derivation and validation of an algorithm for detecting in-hospital stroke in high-risk cardiovascular subjects.
Role: developed data collection platform, developed algorithm and results, co-wrote paper.
Contribution: 50%

[Prior to joining Vanderbilt]

[J20] Anneliese J. Flatt, Amy J. Peleckis, Cornelia Dalton-Bakes, Huong-Lan Nguyen, Sarah Ilany, Austin Matus, Susan K. Malone, Namni Goel, Sooyong Jang[*], **James Weimer**, Insup Lee, and Michael R. Rickels. "Automated insulin delivery for hypoglycemia avoidance and glucose counterregulation in long-standing type 1 diabetes with hypoglycemia unawareness." *Diabetes Technology & Therapeutics* 25, no. 5 (2023): 302-314.
DOI: 10.1089/dia.2022.0506
Impact Factor: 5.4
Summary: This paper presents a study to assess the effect of 18 months of automated insulin delivery on hypoglycemia avoidance and glucose counterregulatory responses to insulin-induced hypoglycemia in long-standing type 1 diabetes complicated by impaired awareness of hypoglycemia.
Role: Mentor: advised on clinical decision support system used in study, edited paper.
Contribution: 10%

[J19] Sydney Pugh*, Ivan Ruchkin, Christopher Bonafide, Sara Demauro, Oleg Sokolsky, Insup Lee, and **James Weimer**. "Evaluating alarm classifiers with high-confidence data programming." *ACM Transactions on Computing for Healthcare* 3, no. 4 (2022): 1-24.
DOI: 10.1145/3549942
Impact Factor: 8.0
Summary: This paper presents a new technique for evaluating alarm performance without labeled data. A weakly supervised approach was developed leveraging data programming tools and results were demonstrated on an actionable alarm dataset.
Role: Mentor: originator of the problem definition and approach, co-wrote paper.
Contribution: 30%

[J18] Herrick, Heidi M., Molly Passarella, **James Weimer**, Christopher P. Bonafide, and Sara B. DeMauro. "Alarm Burden in Infants With Bronchopulmonary Dysplasia Monitored With Pulse Oximetry at Home." *JAMA Network Open* 5, no. 6 (2022): e2218367-e2218367.
DOI: 10.1001/jamanetworkopen.2022.18367
Impact Factor: 13.37
Summary: This paper presents a study to evaluate the association of low oxygen saturation (SpO2) limits, alarm delays, and averaging times with alarm incidence by simulating threshold adjustments using data from a clinical trial of continuous home SpO2 monitoring among infants with Bronchopulmonary Dysplasia.
Role: developed home monitoring system used in study, edited paper.
Contribution: 15%

[J17] Cummings, Stephanie, Scott E. Kasner, Michael Mullen, Andrew Olsen, Michael McGarvey, **James Weimer**, Ben Jackson, Nimesh Desai, Michael Acker, and Steven R. Messé. "Delays in the identification and assessment of in-hospital stroke patients." *Journal of Stroke and Cerebrovascular Diseases* 31, no. 4 (2022): 106327.
DOI: 10.1016/j.jstrokecerebrovasdis.2022.106327
Impact Factor: 2.4
Summary: This paper presents an analysis on the effects of delays, interventions, and the presence of large vessel occlusion in stroke patients.
Role: contributed to problem description and potential solutions, edited paper.
Contribution: 10%

[J16] Susan Kohl Malone, Amy J. Peleckis, Laura Grunin, Gary Yu, Sooyong Jang*, **James Weimer**, Insup Lee, Michael R. Rickels, and Namni Goel. "Characterizing Glycemic Control and Sleep in Adults with Long-Standing Type 1 Diabetes and Hypoglycemia Unawareness Initiating Hybrid Closed Loop Insulin Delivery." *Journal of Diabetes Research* 2021 (2021).
DOI: 10.1155/2021/6611064
Impact Factor: 4.3
Summary: This paper presents study results on the relationships between diabetes therapeutic technologies and sleep health.

Role: Mentor: advised on clinical decision support system used in study, edited paper.
Contribution: 10%

[J15] Radoslav Ivanov[o], Taylor J. Carpenter[*], **James Weimer**, Rajeev Alur, George J. Pappas, and Insup Lee. "Verifying the Safety of Autonomous Systems with Neural Network Controllers." *ACM Transactions on Embedded Computing Systems (TECS)* 20, no. 1 (2020): 1-26.
Best Paper Award
DOI: 10.1145/3419742
Impact Factor: 1.886
Summary: This paper presents the application of a formal verification tool on an autonomous driving system to assure safety.
Role: Mentor: advised on research direction and solution, co-wrote paper.
Contribution: 20%

[J14] Emily K. Presseller, Megan N. Parker, Mandy Lin, **James Weimer**, and Adrienne S. Juarascio. "The application of continuous glucose monitoring technology to eating disorders research: An idea worth researching." *International Journal of Eating Disorders* 53, no. 12 (2020): 1901-1905.
DOI: 10.1002/eat.23404
Impact Factor: 4.861
Summary: This paper presents preliminary results and future research directions for using continuous glucose monitoring technology to aid in eating disorder research.
Role: developed meal detection algorithm used in study, co-wrote paper.
Contribution: 33%

[J13] Esen Yel, Taylor J. Carpenter[*], Carmelo Di Franco, Radoslav Ivanov[o], Yiannis Kantaros[o], Insup Lee, **James Weimer**, and Nicola Bezzo. "Assured runtime monitoring and planning: toward verification of neural networks for safe autonomous operations." *IEEE Robotics & Automation Magazine* 27, no. 2 (2020): 102-116.
DOI: 10.1109/MRA.2020.2981114
Impact Factor: 5.7
Summary: This paper presents an approach for verifying safety of autonomous systems operating in uncertain environments under the effects of disturbances. The main goal was to reduce the complexity of reachability analysis (RA) by training feedforward neural networks to replicate RA and verify the resulting networks using emerging verification tools.
Role: Mentor: originator of the problem and solution, edited paper.
Contribution: 20%

[J12] Ivan Ruchkin[o], Oleg Sokolsky, **James Weimer**, Tushar Hedaoo, and Insup Lee. "Compositional probabilistic analysis of temporal properties over stochastic detectors." *IEEE Transactions on Computer-Aided Design of Integrated Circuits and Systems* 39, no. 11 (2020): 3288-3299.
DOI: 10.1109/TCAD.2020.3012643
Impact Factor: 2.9

Summary: This paper presents a compositional framework for modeling and analysis of noisy monitoring systems. A 3-value detector model uses probability spaces to represent atomic (noncomposite) detectors, and it composes them into a temporal logic-based monitor. The goal is to enable accurate evaluation of logical monitors in early design stages before deploying them.
Role: Mentor: advised on probabilistic representation and detector model, edited paper.
Contribution: 15%

[J11] Radoslav Ivanov[*], Nikolay Atanasov, Miroslav Pajic, **James Weimer**, George J. Pappas, and Insup Lee. "Continuous estimation using context-dependent discrete measurements." *IEEE Transactions on Automatic Control* 64, no. 1 (2018): 238-253.
DOI: 10.1109/TAC.2018.2797839
Impact Factor: 6.8
Summary: This paper considers the problem of continuous state estimation from discrete context-based measurements. Context measurements provide binary information as obtained from the system's environment, e.g., a medical alarm indicating that a vital sign is above a certain threshold. We developed a recursive context-aware filter by approximating the posterior distribution with a Gaussian distribution with the same first two moments as the true posterior.
Role: Mentor: advised on problem formulation and solution, edited paper.
Contribution: 20%

[J10] Lorenzo Fernandez Maimo, Alberto Huertas Celdran[†], Angel L. Perales Gomez, Felix J. Garcia Clemente, **James Weimer**, and Insup Lee. "Intelligent and dynamic ransomware spread detection and mitigation in integrated clinical environments." *Sensors* 19, no. 5 (2019): 1114.
DOI: 10.3390/s19051114
Impact Factor: 3.847
Summary: This paper presents an automatic, intelligent and real-time system to detect, classify, and mitigate ransomware in integrated clinical environments (ICE). The proposed solution is fully integrated with the ICE++ architecture and makes use of machine learning techniques to detect and classify the spreading phase of ransomware attacks affecting ICE.
Role: Mentor: advised on problem space, ensured practicality of solution, edited paper.
Contribution: 15%

[J9] Hung Nguyen[°], Sooyong Jang[*], Radoslav Ivanov[*], Christopher P. Bonafide, **James Weimer**, and Insup Lee. "Reducing pulse oximetry false alarms without missing life‐threatening events." *Smart Health* 9 (2018): 287-296.
DOI: 10.1016/j.smhl.2018.07.002
Impact Factor: 4.9
Summary: This paper presents a robust classification procedure based on the AdaBoost algorithm with a reject option that can identify and silence false alarms, while ensuring zero misclassified clinically significant alarms. We propose a variant of AdaBoost with a reject option by allowing a third decision (i.e., reject) expressing doubt. We evaluate the proposed classifier using a dataset collected from 100 hospitalized children .

Role: Mentor: advised on problem space, co-developed solution concept, edited result generating code, co-wrote paper.
Contribution: 25%

[J8] **James Weimer**, Radoslav Ivanov*, Sanjian Chen°, Alexander Roederer°, Oleg Sokolsky, and Insup lee. "Parameter-Invariant Monitor Design for Cyber-Physical Systems." in *Proceedings of the IEEE*, vol. 106, no. 1, pp. 71-92, Jan. 2018.
DOI: 10.1109/JPROC.2017.2723847
Impact Factor: 20.6
Summary: This paper presents an overview on the design of parameter-invariant (PAIN) monitors for cyber-physical systems (CPS). PAIN monitors are designed such that unknown events and system variability minimally affect the monitor performance. This work describes how PAIN designs can achieve a constant false alarm rate (CFAR) in the presence of data sparsity and intra/inter system variance in real-world CPS. To demonstrate the design of PAIN monitors for safety monitoring in CPS with different types of dynamics, we consider systems with networked dynamics, linear-time invariant dynamics, and hybrid dynamics that are discussed through case studies for building actuator fault detection, meal detection in type I diabetes, and detecting hypoxia caused by pulmonary shunts in infants.
Role: Originator of parameter-invariant approach, developed all results, primary author.
Contribution: 75%

[J7] Junkil Park°, Radoslav Ivanov*, **James Weimer**, Miroslav Pajic, Sang Hyuk Son, and Insup Lee. "Security of cyber-physical systems in the presence of transient sensor faults." *ACM Transactions on Cyber-Physical Systems* 1, no. 3 (2017): 1-23.
DOI: 10.1145/3064809
Impact Factor: 2.3
Summary: This paper aims to distinguish between faults and attacks and develop an attack detection algorithm for the latter only. We provide a framework for developing such a model if it is not provided by manufacturers. Attacks can manifest as either transient or permanent faults depending on the attacker's goal. We provide a real-data case study on an unmanned ground vehicle to evaluate the various aspects of this article.
Role: Originator of problem statement and approach, oversaw experiments, co-wrote paper.
Contribution: 25%

[J6] Miroslav Pajic, **James Weimer**, Nicola Bezzo, Oleg Sokolsky, George J. Pappas, and Insup Lee. "Design and implementation of attack-resilient cyberphysical systems: With a focus on attack-resilient state estimators." *IEEE Control Systems Magazine* 37, no. 2 (2017): 66-81.
DOI: 10.1109/MCS.2016.2643239
Impact Factor: 5.7
Summary: This paper aims to describe efforts on the development of an attack-resilient cyber-physical systems (CPS). Specifically, a case study is considered, the design of a resilient cruise controller for an autonomous ground vehicle, focusing on one component of the system,

namely an attack-resilient state estimator and the performance guarantees in the presence of attacks.
Role: Developed resilient state estimator code, co-executed experiments, co-wrote paper.
Contribution: 25%

[J5] **James Weimer**, Sanjian Chen°, Amy Peleckis, Michael R. Rickels, and Insup Lee. "Physiology-invariant meal detection for type 1 diabetes." *Diabetes technology & therapeutics* 18, no. 10 (2016): 616-624.
DOI: 10.1089/dia.2015.0266
Impact Factor: 5.4
Summary: This paper developed a novel meal detector based on a minimal glucose–insulin metabolism model and shows that the detector is, by design, invariant to patient-specific physiological parameters in the minimal model. Our physiological parameter-invariant (PAIN) detector achieves a near-constant false alarm rate across all individuals and is evaluated against three other major existing meal detectors on a clinical type 1 diabetes data set.
Role: Originator of meal-detection approach, developed all results, primary author.
Contribution: 70%

[J4] Sanjian Chen°, Oleg Sokolsky, **James Weimer**, and Insup Lee. "Data-driven adaptive safety monitoring using virtual subjects in medical cyber-physical systems: a glucose control case study." *Journal of Computer Science and Engineering* 10, no. 3 (2016): 75.
DOI: 10.5626/JCSE.2016.10.3.75
Impact Factor: 0.903
Summary: This paper presents a run-time predictive safety monitoring technique for surgical diabetes that leverages a maximal model coupled with online training of a computational virtual subject (CVS) set. The proposed monitor predicts safety-critical events at run-time using only clinically available measurements. We apply the technique to a surgical glucose control case study.
Role: Mentor: Advised on detection technique for monitor, edited paper.
Contribution: 15%

[J3] Radoslav Ivanov°, **James Weimer**, Allan F. Simpao, Mohamed A. Rehman, and Insup Lee. "Prediction of critical pulmonary shunts in infants." *IEEE Transactions on Control Systems Technology* 24, no. 6 (2016): 1936-1952.
DOI: 10.1109/TCST.2016.2538207
Impact Factor: 4.8
Summary: This paper presents a technique to predict sharp drops in blood oxygen concentration in infants undergoing pulmonary shunting. We employed available noninvasive respiratory measurements and built a parameterized physiological model of the circulation of these gasses through the cardiopulmonary system. Since the model parameters (e.g., metabolic rate) are unknown and vary greatly across patients, we utilize a parameter-invariant detector designed to provide a constant false alarm rate for different patients regardless of the values of the

parameters and robust to missing measurements. Finally, we evaluate the performance of the detector on real patient data collected during surgeries.
Role: Originator of parameter-invariant monitor, co-developed results, co-primary author.
Contribution: 40%

[J2] **James Weimer**, Radoslav Ivanov[o], Alexander Roederer[o], Sanjian Chen[o], and Insup Lee. "Parameter-invariant design of medical alarms." *IEEE Design & Test* 32, no. 5 (2015): 9-16.
DOI: 10.1109/MDAT.2015.2451083
Impact Factor: 2.0
Summary: This tutorial paper presents a design methodology for medical parameter-invariant monitors. We begin by providing a motivational review of currently employed medical alarm techniques, followed by the introduction of the parameter-invariant design approach. Finally, we present a case study example to demonstrate the design of a parameter-invariant alarm for critical shunt detection in infants during surgical procedures
Role: Originator of parameter-invariant technique, developed tutorial, primary author.
Contribution: 60%

[J1] **James Weimer**, Bruce H. Krogh, Mitchel J. Small, and Bruno Sinopoli. "An approach to leak detection using wireless sensor networks at carbon sequestration sites." *International Journal of Greenhouse Gas Control* 9 (2012): 243-253.
DOI: 10.1016/j.ijggc.2012.04.001
Impact Factor: 3.9
Summary: This paper concerns the problem of detecting leaks at carbon sequestration sites through the monitoring of CO_2 levels using a wireless sensor network (WSN). By applying a basic linear dynamic model for an advection–diffusion process, a model-based detection strategy called the Iterative Partial Sequential Probability Ratio Test (IPSPRT) can be employed to detect and localize multiple leaks.
Role: Originator of leak detection technique, developed experiments, primary author.
Contribution: 75%

REFEREED HIGHLY-SELECTIVE CONFERENCE PAPERS

[Acceptance based on peer review of full papers.]

[Since joining Vanderbilt]

[C33] Kimberly Trout, Stefanie Modri, Amanda Watson[†], Insup Lee, Harish Sehdev, and **James Weimer**. "VIBRANT: Early Prediction of Life-Threatening Uterine Atony Using Maternal Heart Rate." In *Proceedings of the ACM/IEEE International Conference on Connected Health: Applications, Systems and Engineering Technologies*, pp. 117-128. 2025.
DOI: 10.1145/3721201.3721379
Acceptance Rate: 25% (24 out of 96)

Summary: This paper presents VIBRANT an algorithm for predicting uterine atony that leads to postpartum hemorrhage using only maternal heart rate that out-performs existing standard of care.
Role: Lead Researcher: Developed system to collect data, developed algorithm and approach, performed validation, primary paper writer.
Contribution: 90%

[C32] Tarek Hamid[o], Kimberly Helm, Hyonyoung Choi, Jean Park, Claire Kendell, Stephanie Cummings, Steve Messe, Stefanie Modri, Insup Lee, Amanda Watson[†], **James Weimer**. "Raproto: An Open-Source Platform for Rapid Prototyping with Wearable Devices" In *2024 IEEE/EMBS Conference on Body Sensor Networks (BSN)*, pp. 56-67. IEEE, 2024.
Best Paper Award Finalist
DOI: 10.1145/3580252.3586973
Acceptance Rate: 21% (37 out of 180 – oral presentations)
Summary: This paper presents Raproto, an open-source easy-to-use rapid prototyping platform that does not require the time, effort, and expertise needed for custom development. The Raproto platform consists of three components, the wearable device(s), communication protocol, and remote storage. These components support the collection, transmission, storage, analysis, and visualization of large-scale data with applications from smaller-scale research studies to large clinical trials. Raproto was demonstrated to be effective in multiple prospective clinical pilots.
Role: Developed initial version of Raproto and oversaw clinical pilots. Mentor: led code reviews, advised on future work, edited paper.

[C31] Sydney Pugh[*], Ivan Ruchkin, **James Weimer**, Insup Lee. "Curating naturally adversarial datasets for learning-enabled medical cyber-physical systems." In *2024 ACM/IEEE International Conference on Cyber Physical Systems (ICCPS)* , pp. 212-223. IEEE, 2024.
Best Paper Award Finalist
DOI: 10.1109/ICCPS61052.2024.00026
Acceptance Rate: 28% (24 out of 85)
Summary: This paper presents the a technique for curating datasets for assessing robustness using only real-world data. Unlike other adversarial robustness techniques, this work utilizes real-world data (not synthetically altered data) to build datasets that any robust classifier should demonstrate decreasing performance. The approach was validated on multiple real-world datasets.
Role: Mentor: guided approach for curitating natural adversarial datasets.

"Rt-acl: Identification of high-risk youth patients and their most significant risk factors to reduce anterior cruciate ligament reinjury risk." In *2021 IEEE/ACM Conference on Connected Health: Applications, Systems and Engineering Technologies (CHASE)*, pp. 35-45. IEEE, 2021.

Best Paper Award Finalist
DOI: 10.1109/CHASE52844.2021.00012
Acceptance Rate: 41% (24 out of 58)
Summary: This paper presents RT-ACL, a system that enhances patient outcomes by reducing their risk of an ACL re-tear by providing personalized recommendations of modifiable risk factors that can be altered during the patient's recovery process. Our system leverages the RT-ACL model that uses labeling functions designed by clinicians to classify the risk level of an ACL re-tear. Further, it identifies modifiable risk factors and suggests interventions to minimize adverse outcomes and complications.
Role: Mentor: Originator of problem, advised on solution, edited paper.
Contribution: 20%

In *Proceedings of the 17th ACM-IEEE International Conference on Formal Methods and Models for System Design*, pp. 1-11. 2019.
Best paper Award
DOI: 10.1145/3359986.3361212
Acceptance Rate: 35% (12 out of 34)
Summary: This paper presents an algorithm that generates security constraints between each sub-component of hybrid automata, and then transforms these constraints into a directed dependency graph to search for non-interference violations. The proposed algorithm can be

applied directly to parallel compositions of automata without resorting to model-flattening techniques. Our static checker works on hybrid systems modeled in Simulink/Stateflow format and decides whether or not the model satisfies non-interference given a user-provided security annotation for each variable.
Role: Mentor: advised on hybrid systems modeling in Simlink/Stateflow, edited paper.
Contribution: 15%

[C17] Radoslav Ivanov[o], **James Weimer**, Rajeev Alur, George J. Pappas, and Insup Lee. "Verisig: verifying safety properties of hybrid systems with neural network controllers." In *Proceedings of the 22nd ACM International Conference on Hybrid Systems: Computation and Control*, pp. 169-178. 2019.
DOI: 10.1145/3302504.3311806
Acceptance Rate: 30% (27 out of 89)
Summary: This paper presents Verisig, a hybrid system approach to verifying safety properties of closed-loop systems using neural networks as controllers. We focus on sigmoid-based networks and exploit the fact that the sigmoid is the solution to a quadratic differential equation, which allows us to transform the neural network into an equivalent hybrid system. By composing the network's hybrid system with the plant's, we transform the problem into a hybrid system verification problem which can be solved using state-of-the-art reachability tools.
Role: Mentor: Originator of approach, guided its development, co-wrote paper.
Contribution: 40%

[C16] Kuk Jin Jang[o], Yash Vardhan Pant, Bo Zhang, **James Weimer**, and Rahul Mangharam. "Robustness evaluation of computer-aided clinical trials for medical devices." In *Proceedings of the 10th ACM/IEEE International Conference on Cyber-Physical Systems*, pp. 163-173. 2019.
DOI: 10.1145/3302509.3311058
Acceptance Rate: 23% (28 out of 123)
Summary: This paper presents the Computer-Aided Clinical Trial (CACT) within a Bayesian statistical framework allowing explicit modeling of assumptions and utilization of simulation results at all stages of a clinical trial. To quantify the robustness of the CACT outcome with respect to a simulation assumption, we define δ-robustness as the minimum perturbation of the base prior distribution resulting in a change of the CACT outcome and provide a method to estimate the δ-robustness.
Role: Mentor: advised on clinical trial testing and statistics, edited paper.

Best Paper Award Finalist
DOI: 10.1145/2735960.2735962
Acceptance Rate: 27% (25 out of 91)
Summary: This paper aims to detect steep drops in blood oxygen content before SpO2 is affected. We present a formal model of the circulation of oxygen and carbon dioxide in the body, characterized by unknown patient-unique parameters. Employing the model, we design a matched subspace detector to provide a near constant false alarm rate invariant to these parameters and modeling uncertainties. Finally, we validate our approach on real-patient data from lung lobectomy surgeries.
Role: Co-primary author, led detector development, oversaw experiments, co-wrote paper.
Contribution: 45%

[C7] Junkil Park[o], Radoslav Ivanov[o], **James Weimer**, Miroslav Pajic, and Insup Lee. "Sensor attack detection in the presence of transient faults." In *Proceedings of the ACM/IEEE Sixth International Conference on Cyber-Physical Systems*, pp. 1-10. 2015.
DOI: 10.1145/2735960.2735984
Acceptance Rate: 27% (25 out of 91)
Summary: This paper presents a transient fault model for each sensor and an algorithm designed to detect and identify attacks in the presence of transient faults. The fault model consists of three aspects: the size of the sensor's interval (1) and an upper bound on the number of errors (2) allowed in a given window size (3). Given such a model for each sensor, the algorithm uses pairwise inconsistencies between sensors to detect and identify attacks.
Role: led problem definition, oversaw solution development and experiments, co-wrote paper.
Contribution: 25%

Acceptance Rate: 67% (113 out of 167)
Summary: This paper presents a method to guarantee conformance of neurosymbolic models to real-world physical constraints. Leveraging representative samples, called memories, we partition the state space into disjoint subsets and compute bounds that should be respected by the neural network in each subset. This serves as a symbolic wrapper for guaranteed conformance. We experimentally show performance on three case studies (Car Model, Drones, and Artificial Pancreas).
Role: Mentor: guided research applications, edited paper.
Contribution: 15%

DOI: 10.1109/EMBC40787.2023.10339980
Summary: This paper presents a memory classifier approach that attains a boost in robustness using expert-informed features. Memory classifiers combine standard deep neural network training with a domain knowledge-guided similarity metric to boost the robustness of classifiers. We evaluate the performance of the models against naturally occurring physiological perturbations, specifically electrode movement, muscle artifact, and baseline wander noise
Role: Mentor: Advised on the application of memory classifiers to physiology, edited paper.

In *2015 37th Annual International Conference of the Ieee Engineering in Medicine and Biology Society (Embc)*, pp. 1504-1507. IEEE, 2015.
DOI: 10.1109/EMBC.2015.7318656
Summary: This paper presents a fingertip photoplethysmography based technique to assess patient fluid status that is robust to waveform artifacts and health variability in the underlying patient population. The technique is intended for use in intensive care units, where patients are at risk for hypovolemia, and signal artifacts and inter-patient variations in health are common.
Role: co-developed problem and solution, developed detection code, co-wrote paper
Contribution: 45%

[OC9] **James Weimer**, Nicola Bezzo, Miroslav Pajic, Oleg Sokolsky, and Insup Lee. "Attack-resilient minimum mean-squared error estimation." In *2014 American Control Conference*, pp. 1114-1119. IEEE, 2014.
DOI: 10.1109/ACC.2014.6859478
Acceptance Rate: 67% (931 out of 1400)
Summary: This paper presents the design of resilient estimators for stochastic systems. To this end, we introduce a minimum mean-squared error resilient (MMSE-R) estimator whose conditional mean squared error from the state remains finitely bounded and is independent of additive measurement attacks. An implementation of the MMSE-R estimator is presented and is shown as the solution of a semidefinite programming problem, which can be implemented efficiently using convex optimization techniques.

"A virtual laboratory for micro-grid information and communication infrastructures." In *2012 3rd IEEE PES Innovative Smart Grid Technologies Europe (ISGT Europe)*, pp. 1-6. IEEE, 2012.
DOI: 10.1109/ISGTEurope.2012.6465836
Summary: To evaluate various information and communication infrastructures for micro-grid deployment, this work introduces the Virtual Micro-Grid Laboratory (VMGL) and provides a preliminary analysis of Long-Term Evolution (LTE) as a micro-grid communication infrastructure.
Role: led the development of the virtual micro-grid laboratory, primary author.
Contribution: 60%

[OC6] **James Weimer**, José Araújo, and Karl Henrik Johansson. "Distributed event-triggered estimation in networked systems." *4th IFAC conference on Analysis and Design of Hybrid Systems (ADHS). IFAC Proceedings Volumes* 45, no. 9 (2012): 178-185.
DOI: 10.3182/20120606-3-NL-3011.00099
Acceptance Rate: 72% (72 out of 100)

Summary: This paper presents a global event-triggered communication policy for state estimation that minimizes a weighted function of the network energy consumption and the number of transmissions subject to constraints on the estimator performance.
Role: led the problem and solution development, primary author.
Contribution: 75%

[OC5] **James Weimer**, Soummya Kar, and Karl Henrik Johansson. "Distributed detection and isolation of topology attacks in power networks." In *Proceedings of the 1st international conference on High Confidence Networked Systems*, pp. 65-72. 2012.
DOI: 10.1145/2185505.2185516
Summary: This paper addresses the issue of detecting and isolating topology attacks in power networks. A topology attack, unlike a data attack and power injection attack, alters the physical dynamics of the power network by removing bus interconnections. To detect topology attacks, a stochastic hypothesis testing problem is considered assuming noisy measurements are obtained by periodically sampling a dynamic process described by the networked swing equation dynamics, modified to assume stochastic power injections.
Role: led problem development and solution, primary author
Contribution: 65%

[OC4] **James Weimer**, José Araújo, Aitor Hernandez, and Karl Henrik Johansson. "Periodic constraint-based control using dynamic wireless sensor scheduling." In *2011 50th IEEE Conference on Decision and Control and European Control Conference*, pp. 4789-4796. IEEE, 2011.
DOI: 10.1109/CDC.2011.6161330
Summary: This paper introduces and experimentally evaluates a new receding-horizon approach for performing constraint-based control using a WSN. By leveraging the system controllability, the receding-horizon controller is formulated as a mixed-integer programming problem which, at each time step, simultaneously generates a control sequence and sensor selection schedule such that the desired performance is achieved while minimizing the energy required to perform data acquisition and control.
Role: led problem development and solution, primary author
Contribution: 65%

[OC3] Kin Cheong Sou, **James Weimer**, Henrik Sandberg, and Karl Henrik Johansson. "Scheduling smart home appliances using mixed integer linear programming." In *2011 50th IEEE conference on decision and control and European control conference*, pp. 5144-5149. IEEE, 2011.
DOI: 10.1109/CDC.2011.6161081
Summary: This paper presents an approach to minimize electricity cost through a scheduling problem of smart home appliances. Operation characteristics, such as expected duration and peak power consumption of the smart appliances, can be adjusted through a power profile signal. The optimal power profile signal minimizes cost, while satisfying technical operation constraints and consumer preferences.

Role: co-developed problem and technical solution, co-wrote paper
Contribution: 40%

[OC2] **James E. Weimer**, Bruno Sinopoli, and Bruce H. Krogh. "Large-scale source localization with a wireless sensor network application." *IFAC Proceedings Volumes* 44, no. 1 (2011):4278-4283.
DOI: 10.3182/20110828-6-IT-1002.03232
Acceptance Rate:
Summary: This paper concerns the problem of large-scale source localization arising when many potential sources must be classified as either active or inactive such that the probability of missing an active source is bounded. A new iterative heuristic called the Iterative Source Localization Procedure (ISLoP) is introduced that reduces the complexity of a source localization problem with J potential sources from 2^J to J per iteration, while also providing a local bounds on the maximum probability of a missed source.
Role: led problem development and solution, primary author

Summary: While the feasibility of CPS recovery is well demonstrated, one issue not fully addressed is that what kind of states should be used for the recovery. In this paper, we address this issue and claim to use consistent states.
Role: co-developed technical solution, edited paper.
Contribution: 20%

[W5] Hung Nguyen, Radoslav Ivanov[*], Sara B. DeMauro, and **James Weimer**. "Repulmo: A remote pulmonary monitoring system." *ACM SIGBED Review* 16, no. 2 (2019): 46-50.
DOI: 10.1145/3357495.3357501
Summary: This paper presents RePulmo, an open-source platform for secure and accurate remote pulmonary data monitoring. RePulmo satisfies both robustness and security requirements by utilizing hospital-grade pulse oximeter devices with multiple layers of security enforcement.
Role: Mentor: originator of problem, advised on technical solution, edited paper.
Contribution: 30%

[W4] **James Weimer**, Jose Araujo, Mani Amoozadeh, Seyed Alireza Ahmadi, Henrik Sandberg, and Karl Henrik Johansson. "Parameter-Invariant Actuator Fault Diagnostics in Cyber-Physical Systems with Application to Building Automation." *Control of Cyber Physical Systems*. 2013.
DOI: https://doi.org/10.1007/978-3-319-01159-2_10
Summary: This paper presents a robust method for performing active actuator fault detection and diagnostics (FDD) in heating ventilation and air conditioning (HVAC) systems. The proposed actuator FDD strategy, for testing whether an actuator is stuck in a given position, is designed on using an invariant hypothesis testing approach and is an improvement of a previous strategy that employed an adaptive detection strategy.
Role: Primary author. Originated problem, developed solution, wrote paper.
Contribution: 75%

[W3] **James Weimer**, Nicola Bezzo, Miroslav Pajic, George J. Pappas, Oleg Sokolsky, and Insup lee. "Resilient Parameter-Invariant Control with Application to Vehicular Cruise Control." *Control of Cyber Physical Systems*. 2013.
DOI: https://doi.org/10.1007/978-3-319-01159-2_11
Summary: This paper addresses the general problem of resilient control of unknown stochastic linear time-invariant (LTI) systems in the presence of sensor attacks. Motivated by a vehicle cruise control application, this work considers a first order system with multiple measurements, of which a bounded subset may be corrupted.
Role: Primary author. Originated problem, developed solution, wrote paper.
Contribution: 75%

Role: algorithm developer, co-wrote abstract
Contribution: 50%

[A2] Miroslav Pajic, Nicola Bezzo, **James Weimer**, Rajeev Alur, Rahul Mangharam, Nathan Michael, George J. Pappas et al. "Towards synthesis of platform-aware attack-resilient control systems." In *Proceedings of the 2nd ACM international conference on High confidence networked systems*, pp. 75-76. 2013.
DOI: 10.1145/2461446.2461457
Summary: This extended abstract presents a conceptual solution to synthesizing a platform-aware attack-resilient controller.
Role: co-developed conceptual solution, edited abstract.
Contribution: 20%

[A1] Miroslav Pajic, Nicola Bezzo, **James Weimer**, Oleg Sokolsky, Nathan Michael, George J. Pappas, Paulo Tabuada, and Insup Lee. "Demo abstract: Synthesis of platform-aware attack-resilient vehicular systems." In *2013 ACM/IEEE International Conference on Cyber-Physical Systems (ICCPS)*, pp. 251-251. IEEE, 2013.
Summary: introduced a design framework for development of high-confidence vehicular control systems that can be used in adversarial environments. The framework employs control system design techniques (control-level defenses) that guarantee that the vehicle will maintain control, possibly at a reduced efficiency, under a variety of externally-originating attacks on sensors, actuators, and communication and computation resources.
Role: developed code for demo, edited paper
Contribution: 20%

TUTORIAL PRESENTATIONS

[Acceptance based on peer review of abstracts or short papers]

[Prior to joining Vanderbilt]

[T3] James Weimer, Oleg Sokolsky, and Insup Lee. "Tutorial Abstract: Parameter-Invariant Monitor Design for Cyber-Physical Systems." *Cyber Physical Systems Week (CPSweek)*, 2016.
Summary: This tutorial presents how to design parameter-invariant monitors for cyber-physical systems.
Role: developed tutorial material, presented two of three modules, wrote abstract.
Contribution: 75%

[T2] James Weimer, Oleg Sokolsky, and Insup Lee. "Tutorial Abstract: Robust Medical Monitor Design." *International Conference on Healthcare Informatics (ICHI)*, 2015.
Summary: This tutorial presents how to design parameter-invariant monitors for medical monitors.
Role: developed tutorial material, presented two of three modules, wrote abstract.
Contribution: 75%

[T1] James Weimer, Oleg Sokolsky, and Insup Lee. "Tutorial Abstract: Parameter-Invariant Monitor Design for Cyber-Physical Systems." *Embedded Systems Week (ESweek)*, 2015.
Summary: This tutorial presents how to design parameter-invariant monitors for cyber-physical systems.
Role: developed tutorial material, presented two of three modules, wrote abstract.
Contribution: 75%

PATENTS AND PATENT APPLICATIONS

[Since joining Vanderbilt]

[P6] **James Weimer**. VU25108 (222230-8791) METHODS, SYSTEMS, AND DEVICES FOR EARLY PREDICTION OF LIFE-THREATENING UTERINE ATONY USING MATERNAL HEART RATE – Provisional Patent

[P5] **James Weimer**, Amanda Watson†, Stefanie Modri, and Insup Lee. VU23168 (222230-8571) Provisional Application for SYSTEMS AND METHODS FOR POSTPARTUM HEMORRHAGE RISK PREDICTION USING MATERNAL HEART RATE – Provisional Patent

[Prior to joining Vanderbilt]

[P4] Amanda Watson†, Claire Kendell°, **James Weimer**, Insup Lee. “A method for determining levels of a biomarker of a user by a mobile device” – Provisional Patent Filed.

[P3] **James Erich Weimer**, and Steven Russell Messé. "Monitoring of upper limb movements to detect stroke." U.S. Patent Application 18/563,707, filed July 11, 2024.

[P2] Jason Van Batavia, Stephen A. Zderic, **James Weimer**, Brett Garberman, Qizhi Li, Xin Liu, Igor Shamis, Yuriy M. Mirochnik, Alexander Gutsol. “UROFLOW MONITORING SYSTEM AND METHOD”, US17/636,950. Submitted.

[P1] Sanjian Chen[o], **James Erich Weimer**, and Insup Lee. "Methods, systems, and computer readable media for physiology parameter-invariant meal detection." U.S. Patent 10,792,423, issued October 6, 2020.

Licenses Optioned/Executed

[Since joining Vanderbilt]

[L4] License [P6] to Vasowatch.

[L3] Licensed [P5] to Vasowatch.

[Prior to joining Vanderbilt]

[L2] Licensed [P4] to Luminosity.

[L1] Licensed [P3] to Neuralert.

Invited Talks [excludes conference presentations]

[T35] *Connecting Care: Innovations in the Internet of Medical Things.* Emerging Trends in Health Technologies. Philadelphia. October 2025.

[T34] *CPS in the Age of AI.* National Science Foundation Cyber-Physical Systems PI meeting. March 2025.

[T33] *Internet of Medical Things: Research to Impact.* World Bonzai Forum. Sendai Japan. March 2025.

[T32] *Internet of Medical Things at Vanderbilt.* Vanderbilt University Medical Center Ophthalmology Symposium. November 2024.

[T31] *Internet of Medical Things at Vanderbilt.* University of Leeds industrial collaboration symposium, Nashville. October 2024.

[T30] *Internet of Medical Things: Medical Device Security.* DARPA CASTLE site visit, Nashville. July 2024.

[T29] *Internet of Medical Things: From Ideas to Products.* Workshop on Future Technologies for Emergency Response and Public Safety. June 2024.

[T28] *Securing Learning-Enabled Systems: Being More than Data Subscribers.* Vanderbilt Workshop on Biosecurity, AI, and Modern Conflict. April 2024.

[T27] *Internet of Medical Things: Learning-Enabled Medical Cyber-Physical Systems on the Edge.* Presented at Vanderbilt Electrical and Computer Engineering Day. April 2024.

[T26] *Commercializing Learning-Enabled Medical Cyber Physical Systems.* Presented at NSF Cyber-Physical Systems PI meeting. March 2024.

[T25] *Internet of Medical Things: Medical Cyber-Physical Systems on the Edge.* Presented at Vanderbilt Department of Computer Science Industrial Advisory Committee Meeting. December 2023.

[T24] *Internet of Medical Things: Medical Cyber-Physical Systems on the Edge.* Presented at Vanderbilt Institute for Software Integrated Systems. September 2023.

[T24] *Internet of Medical Things: Medical Cyber-Physical Systems on the Edge.* Presented at Vanderbilt Institute for Software Integrated Systems. September 2023.

[T23] *Market-Informed Design for Safe Autonomous Medical Systems.* Presented at Vanderbilt Institute for Surgery and Engineering. May 2023.

[T22] *Monitors for Learning-Enabled Components: ReCal and ModelGuard.* Presented at DARPA Assured Autonomy Site Visit, Philadelphia. December 2022.

[T21] *Personalizing Medicine in an Impersonal World: Design and Analysis of Safe Autonomous Medical Systems.* Presented at Vanderbilt University Biomedical Engineering Seminar, November 2022.

[Prior to joining Vanderbilt]

[T20] *Personalizing Medicine in an Impersonal World: Opportunities and Challenges in the Internet of Medical Things.* Presented at University of Pennsylvania Medicine, April 2022.

[T20] *Personalizing Medicine in an Impersonal World: Design and Analysis of Safe Autonomous Medical Systems.* Presented at Vanderbilt University, January 2022.

[T19] *Sensing, Learning, and Adaptation: Design and Analysis of Learning-Enabled Medical Systems.* Presented at NSF Smart and Connected Health PI Meeting, March 2021.

[T18] *Anomaly Detection for Safe Autonomy: Confidence Calibration using Context.* Presented at Semiconductor Research Corporation, November 2020.

[T17] *Verification and Monitoring of Learning.* ARO MURI Kickoff Meeting, June 2020.

[T16] *Personalizing Health in an Impersonal World: Design and Analysis for Safe Autonomous Medical Systems.* Presented at Washington University, March 2020.

[T15] *Personalizing Health in an Impersonal World: Design and Analysis for Safe Autonomous Medical Systems.* Presented at Washington University, February 2020.

[T14] A*utonomous Medical Systems: the Future of Personalized Health.* Presented at Penn-India Technology Innovation Forum, Mumbai India, January 2020.

[T13] *Medical Cyber-Physical Systems and Autonomy: Beyond Pacemakers and Pancreases.* Presented at NSF/NIH Smart and Connected Health PI Meeting, January 2020.

[T12] *Personalizing Health in an Impersonal World: Design and Analysis for Safe Learning-Enabled Medical Systems.* Presented at University of Illinois Urbana-Champaign (UIUC), November 2019.

[T11] *Personalizing Health in an Impersonal World: Design and Analysis for Safe Learning-Enabled Medical Systems.* Presented at Vanderbilt University, October 2019.

[T10] *Personalizing Health in an Impersonal World: Design and Analysis for Safe Learning-Enabled Medical Systems.* Presented at Washington University, October 2019.

[T9] *Resilience in Medical Cyber-Physical Systems.* Presented at NSF Workshop on Grand Challenges in Resilience, Purdue University. March 2019.

[T8] *The Internet of Medical Things: Personalizing Medicine in an Impersonal World.* Presented at NSF ASSIST Workshop, March 2019.

[T7] *The Internet of Medical Things: Personalizing Medicine in an Impersonal World.* Presented at Carnegie Mellon University, May 2018.

[T6] *The Internet of Medical Things: Personalizing Medicine in an Impersonal World.* Presented at Carnegie Mellon University, May 2018.

[T5] *Towards Composition of Cyber-Physical Security Techniques.* Presented at ONR RHIMES PI Meeting, March 2018.

[T4] *Challenges in (Medical) Cyber-Physical System Security.* Presented at the workshop on Cyber-Physical Systems Security, NSF CPS PI meeting, November 2017.

[T3] *The Internet of Medical Things: Personalizing Medicine in an Impersonal World.* Presented at Intel Corporation, August 2017.

[T2] *Personalizing Medicine in an Impersonal World: Parameter-Invariant Design for Cyber-Physical Systems*. Presented at Children's Hospital of Philadelphia, May 2016.

[T1] *Personalizing Medicine in an Impersonal World: Parameter-Invariant Design for Cyber-Physical Systems*. Presented at University of Pennsylvania, May 2016.

ARTIFACTS AND IMPLEMENTATIONS

- Medical devices and systems:
  [Developed or Maintained by Vanderbilt]

  - VIBRANT: a non-invasive predictor of life-threatening uterine atony (2025-present)
  - VasowatchAI: a non-invasive predictor for postpartum hemorrhage. (2022-present)
  - StrokeDetectAI: a non-invasive monitor for in-hospital stroke (2019-present)
    https://weimerj.github.io/StrokeDetectAI/
  - PPHdetection: a wearable optical postpartum hemorrhage detection system (2020-present)
    https://weimerj.github.io/PPHdetection/
  - Raproto: An Open Source Platform for Rapid Prototyping of Wearable Medical Devices (2020-present)
    https://github.com/weimerj/Raproto-Tizen
  - RePulmo: remote pulmonary monitoring for infants (2017-present);

  [Developed or Completed prior to joining Vanderbilt]

  - Meal Detection for Type 1 Diabetes (2016-2022). US Patent 10,792,423.
  - SenseSupport: Monitoring Bulimia Nervosa using blood glucose (2018-2021);
  - Improving gating of proton therapy machines (2017-2021);
  - Uroflow: at-home monitoring of urinary flow patterns in children (2017-2021);
  - Smart alarms for the intensive care unit (2015-2020);
  - HypoCount: a clinical decision support system for analyzing overnight hypoglycemia (2015 -2022).
- Software packages and platforms:
  [Developed or Maintained by Vanderbilt]

  - Raproto: An Open Source Platform for Rapid Prototyping of Wearable Medical Devices (2020-present)
    https://github.com/weimerj/Raproto-Tizen

[Developed or Completed prior to joining Vanderbilt]

- Verisig: an open-source tool for verification of neural networks in-the-loop (2019-2022): https://github.com/verisig
- OpenICE-lite: an open-source medical device interoperability platform for connecting and securing the internet of medical things (2015-2020); https://github.com/samdware/openice-lite
- DataWiz: a clinician-facing parser for the internet-of-medical-things (2016-2021).

- Environmental monitoring *[Developed or Completed prior to joining Vanderbilt]*:
  - CO2 Sequestration Testbed: a hardware-in-the-loop testbed for simulating CO2 advection and diffusion from subterranean carbon sequestration sites (2007-2011).
- Smart buildings *[Developed or Completed prior to joining Vanderbilt]*:
  - KTH HVAC Testbed, an open-source testbed for automatic control of heating, ventilation, and air conditioning systems (2011-2018).
- Autonomous systems and robotics *[Developed or Completed prior to joining Vanderbilt]*:
  - Deployment of resilient speed estimation for automotive cruise control in an american built car (2013-2017)

RESEARCH MENTORING (CURRENT)

Postdoctoral Fellows / Research Engineers / Research Scientists

[RS4] Michael Laurenzano. Senior Research Scientist. Vanderbilt University. 2026-present.

[RS3] Chad Ice. Senior Research Engineer. Vanderbilt University. 2025-present.

[RS2] Evan Krueger. Senior Research Engineer. Vanderbilt University. 2025-present.

[RS1] Taylor Carpenter. System Architect. Vanderbilt University. 2024-present.

Current Ph.D. Students

[CS3] Yue Zhao. “Data Requirement Constrained Learning in Time-Series Data”. Vanderbilt University. 2nd year.

[CS2] Zhiting Zhou. “Data Repair for Learning-Enabled Medical Systems”. Vanderbilt University. 2nd year.

[CS1] Chi Phuong Ngoc Huynh. “Data Design for Cyber-Physical Systems”. Vanderbilt University. 3rd year.

RESEARCH MENTORING (PAST / GRADUATED ALUMNI)

Postdoctoral Fellows / Research Engineers / Research Scientists:

[PDA2] Amanda Watson (2020 - 2022): Internet-of-Medical Things. University of Pennsylvania. (co-advised w/ Insup Lee). Next/current position: Assistant professor, Department of Electrical and Computer Engineering, University of Virginia.

[PDA1] Shawn Li (2019 - 2022): Internet-of-Medical Things. University of Pennsylvania. (co-advised w/ Insup Lee). Next/current position: postdoctoral researcher, Department of Mechanical Engineering, University of Virginia.

Graduated Ph.D. Students:

[DA2] Sydney Pugh. *"*Weak Supervision for Autonomous Medical Systems*"*. University of Pennsylvania. 2024 (co-Advised w/ Insup Lee). Next/current position: Post-doc, Department of Computer and Information Science, University of Pennsylvania (primary mentor: Kevin Johnson)

[DA1] Radoslav Ivanov. *"Context-Aware Sensor Fusion for Securing Cyber-Physical Systems"*. University of Pennsylvania. 2017 (co-Advised w/ Insup Lee). Next/current position: Assistant professor, Department of Computer Science, Rensselaer Polytechnic University

OUTREACH/EDUCATION ACTIVITIES

[O13] **College of Connected Computing / Computer Science faculty search committee**. Vanderbilt University. 2026

[O12] **College of Connected Computing / Computer Science faculty search committee**. Vanderbilt University. 2025

[O11] **Electrical and Computer Engineering faculty search committee**. Vanderbilt University. 2024

[O10] **Innovation Catalyst Review Committee**. Vanderbilt University. 2023 - present.

[O9] **Dare to Grow campaign kick-off participant.** Vanderbilt University. April 2023.

[O8] **Innovation Ambassador**. Vanderbilt University. 2022 - present.

[O7] **Penn Community Collaboratory for Co-Creation**. Executive Committee member. University of Pennsylvania, 2021 - 2022.

[O6] **Penn Health Tech**. Technical Advisor. University of Pennsylvania, 2020-2022.

[O5] **Penn-Trilogy Bootcamps**. Faculty advisor for Data Science and Cyber-Security Bootcamps. University of Pennsylvania, 2019 - 2022.

[O4] **Women's Society of Cyberjitsu**. Guest teacher. Taught a biomedical signal processing outreach workshop called "Music-from-the-heart", 2019.

[O3] **Women in Computer Science High School Day**. Medical Device Lab tour and demos. University of Pennsylvania, 2018 & 2019.

[O2] **Medical Device Club**. Executive Director. Vanderbilt University, 2022-present. University of Pennsylvania, 2017 - 2022.

[O1] **Penn Health Tech**. Education committee member. University of Pennsylvania, 2017-2019.

PROFESSIONAL EXPERIENCE

- **Research Assistant**
  ECE Department, Carnegie Mellon University, Pittsburgh, PA
  Research on large-scale multi-source detection using wireless sensor networks.
  June 2007 - May 2010

- **Research Assistant**
  ECE Department, Carnegie Mellon University, Pittsburgh, PA
  Research on modeling and implementation of mode-switching with application to ilure analysis in steer-by-wire systems.
  August 2005 - May 2007

- **Electrical Engineer**
  Delphi Electronics and Safety, Delphi Automotive, Kokomo, IN
  System monitoring - designed a multi-channel SPI-bus monitoring tool.
  June 2005 - August 2005

- **Electrical Engineer**
  Delphi Electronics and Safety, Delphi Automotive, Kokomo, IN
  System validation - designed and verified component models.
  June 2004 - August 2004

FUNDING

2016 – present: Funded Research Grants, Contracts, and Fellowships.

Total Research Funding (PI + Co-PI, active and completed projects): ~ $30.2M
Research Funding as PI: $3.3M ($1.2M since joining Vanderbilt).
Research Funding as Co-PI: $26.9M ($7M since joining Vanderbilt).

Pending Grants

[all at Vanderbilt]

[PG2] Bennet Landman (PI), James Weimer (Co-PI - Sensing Lead), et. al. "Multi-Modal AI for Early Lung Cancer Detection", Marcus Foundation, $18M.

[PG1] James Weimer (PI), Kevin Leach (Co-PI) "SCH: IoMT-SIM: Software Instrumentation, Emulation, and Repair of Internet of Medical Things", NSF, $1M.

Awarded Grants

[Since joining Vanderbilt]

[G28] Himanshu Neema (PI), James Weimer (Co-PI - TA 2 lead), Sandeep Neema, Kevin Leach. "ARMOR-H: Advanced Risk Management and Operational Resilience for Hospitals", ARPA-H, $5M. 10/1/2025 - 9/30/2026.

[G27] James Weimer (Founder Vasowatch, Inc.) "Investment in Vasowatch, Inc." Vanderbilt Innovation Investment fund, $300k (one time investment)

[G26] James Weimer (PI), Meiyi Ma. "Advanced Resuscitation and Medical-Skills for Operational Readiness - ARMOR", US Army, $114k. 9/1/2025-8/31/2026.

[G25] Kevin Leach (PI), James Weimer (Co-PI), Barish James Weimer (PI). "ARPA-H: BALAM-D: Binary Assurance Lodestar for Advancing Medical Devices", ARPA-H, $2M. 5/1/2024 - 4/30/2026.

[G24] James Weimer (PI). "Medical Realities of Large-Scale Combat Operations", US Army, $150k. 5/10/2024-2/5/2025.

[G23] *CAREER: Learning-Enabled Medical Cyber-Physical Systems*. National Science Foundation, Award ID: 2339637, $575K, 4/1/2024 - 3/31/2029. James Weimer (PI).

[G22] *Medical Device Club.* Analog Devices International, $10k, 6/1/2022. James Weimer (PI) (gift)

[G21] *Internet of Medical Things Lab.* Vanderbilt Institute of Surgery and Engineering (VISE), $10k, 5/1/2022. James Weimer (PI). (seed grant)

[G20] *Momitor: Wearable technology for detecting postpartum hemorrhage. National Institute of Health (NIH), 1R41HL164191-01 (subcontract from Vasowatch),* $40K, *12/1/2022 - 9/30/2023.* James Weimer (PI).

[Prior to joining Vanderbilt]

[G19] *Wearable Device for Early Postpartum Hemorrhage Detection.* Penn Health Tech, $45K, 9/1/2021 - 8/31/2022. James Weimer (PI), Stefanie Modri (Co-PI), Kimberly Trout (Co-PI).

[G18] *SCC-IRG JST: Active sensing and personalized interventions for pandemic-induced social isolation.* National Science Foundation, Award ID: 2125561. $770K, 10/1/2021 - 9/30/2024. Insup Lee (PI), George Demiris, Oleg Sokolsky, James Weimer.

[G17] *CPS: AutoWean: Foundations of Autonomous Medical CPS for Mechanical Ventilation Weaning.* National Institute of Health, R01EB029767, $1.1M, 9/01/2019 - 7/31/2022. James Weimer (PI-lead), Insup Lee (PI), Barry Fuchs (Co-I), Oleg Sokolsky (Co-I).

[G16] *SCH: Monitoring safety and adherence of pain management through remote opioid sensing and analysis.* National Institute of Health, R01EB029363, $905K, 9/30/2019 - 6/30/2023. James Weimer (PI-lead), Insup Lee (PI), Ping Wang (PI), Shu Yang (PI).

[G15] *Using Continuous Glucose Monitoring to Detect and Intervene on Maintenance Factors for Transdiagnostic Binge Eating Pathology,* National Institutes of Health STTR R43 (subcontract from Promptworks), $30K, 09/2019-08/2021. James Weimer (PI).

[G14] *Robust Concept Learning and Lifelong adaptation against adversarial attacks.* ARO MURI, $6.26M, 5/2020-4/2025. Insup Lee (PI), Osbert Bastani, Kostas Daniilidis, Eric Eaton, Dan Roth, James Weimer, Julia Parish-Morris.

[G13] *SCH: INT: Collaborative Research: Smart Alarms 2.0: Foundations for Caregiver-in-the-loop Suppression of Non-Informative Alarms.* National Science Foundation, $1.2M, 9/01/2019 - 08/31/2023. Insup Lee (PI), Christopher Bonafide, Sara DeMauro, James Weimer, James Won.

[G12] *Anomaly Detection for Safe Autonomy.* Semiconductor Research Corp, $100K, 07/2019-06/2022. Insup Lee (PI), Oleg Sokolsky, James Weimer.

[G11] *Pitch Plus: A Device to Reduce Overuse Injuries and Improve Rehabilitation in Youth Baseball Players.* Dennis Drummond Interdisciplinary Research Grant, $7.4K, 12/2018-12/2019. Elliot Greenberg (PI), James Weimer, J. Todd Lawrence.

[G10] *Pediatric patient safety learning laboratory to re-engineer continuous physiologic monitoring systems.* NIH R18, $2.5M, 10/2018-10-2022. Christopher Bonafide (PI), James Won, Sara DeMauro, Insup Lee, Sarah Rottenburgh, James Weimer.

[G9] *The DOVE Device.* Penn Medical Device Accelerator, $10K, 11/2018 - 11/2019. Jake Brenner (PI), Cynthia Dahl, James Weimer.

[G8] *Proton Target and Collimator Scanning on the SARRP.* Penn Radiation Oncology Grant, $20K, 11/2018 - 11/2019. Eric Diffenderfer (PI), Michelle Kim, James Weimer.

[G7] T*owards Improving Glycemic Control through Behavioral Feedback in Type 1 Diabetes.* Pennsylvania Tobacco Fund, $200K, 9/2018 - 8/2022. Insup Lee (PI), Shivani Agarwal, Michael Rickels, James Weimer.

[G6] *Synergy: Collaborative Research: Security and Privacy-Aware Cyber-Physical Systems.* NSF-Intel Partnership, $190K, 7/2018 – 6/2020. Insup Lee (PI) and James Weimer.

[G5] *Using Continuous Glucose Monitoring to Detect Eating Disorder Symptoms in Bulimia Nervosa.* Hilda and Preston Davis Foundation, $200K, 5/2018 - 5/2020. Adrienne Juarascio (PI), Evan Forman, Stephanie Manasse, James Weimer, Zoe Zhang.

[G4] *Integrated Static and Dynamic Approaches to High-Assurance for Learning-Enabled Cyber-Physical Systems.* DARPA Assured Autonomy (AA), $4.8 M, 4/2018 - 3/2022. Insup Lee (PI), Rajeev Alur, Daniel Lee, Manfred Morari, George Pappas, Oleg Sokolsky, James Weimer, Nicola Bezzo.

[G3] *AFFIRM: Scenario-Based Design and Verification of Resilient Cyber-Physical Systems.* DARPA Cyber-Assured Systems Engineering (CASE), $3.0M, 2/2018 - 2/2022. Rajeev Alur (PI), Insup Lee, Rahul Mangharam, Mayur Naik, Oleg Sokolsky, James Weimer.

[G2] *Development of Control-Aware Cyber Techniques for Attack-Resilient Industrial & Combat Systems,* Office of Naval Research, $2.7M, 10/2016 - 9/2019. Insup Lee (PI), George J. Pappas, Oleg Sokolsky, James Weimer, Miroslav Pajic, Nicola Bezzo.

[G1] *Prehabilitation to Improve Postoperative Outcomes and Limit Complications.* Penn Center for Precision Medicine, $100K, 12/2016 - 5/2018. Carsten C. Starke, Nalaka Gooneratne, Junxin Li, Greg Grant, Jason H. Moore, Garret A. FitzGerald, Elizabeth Mahanna, Gwo-Chin Lee, Yvette Sheline, James Weimer.

Declined Grants

[Since joining Vanderbilt]

[DG10] CARECOM: Care Delivery Platform Mission Orchestration Middleware. ARPA-H. $6M, James Weimer (PI). 10/1/2024 - 9/30/2028

[Prior to joining Vanderbilt]

[DG9] *Foundations for Scalable Learning-Enabled Co-Design of Cyber-Physical Systems.* DARPA Symbiotic Design, $6M, 5/1/2020 - 4/30/2024. Oleg Sokolsky (PI), Osbert Bastani, Insup Lee, Lyle Ungar, James Weimer.

[DG8] *SCH: INT: Collaborative Research: Development and assessment of a photonic healthcare technology for early detection of respiratory syncytial virus.* National Science Foundation, $1.1M, 11/1/2019 - 10/31/2023. Lan Yang (PI), Gaya Amarasinghe, Abraham Qavi , James Weimer.

[DG7] *SCC: Facilitating Social Inclusion Through Cyber-Physical Interactions*. National Science Foundation, $1M, 5/1/2018-4/30/2022. Insup Lee (PI), George Demiri, Zack Ives, Ani Nenkova, Therese Richmond, Oleg Sokolsky, James Weimer.

[DG6] *STICHES: Secure and Trustworthy Intelligent Composable Heterogeneous Systems for IoBT*. W911NF-17-S-0005 Internet of Battlefield Things (IoBT) Collaborative Research Alliance (CRA), $21M, 3/1/2018-2/28/2023. Insup Lee (PI), Rajeev Alur, George J. Pappas, Oleg Sokolsky, James Weimer, John A. Stankovic, John Lach, Kamin Whitehouse, Lu Feng, Miroslav Pajic, Mary Cummings, Cynthia Rudin, Ali Jadbabaie, Tamara Broderick, Patrick Jaillet, Asuman Ozdaglar, Suvrit Sra.

[DG5] *CPS: Frontier: Collaborative Research: Rigorous Design and Analysis of Closed-Loop Medical CPS*. National Science Foundation, $5M, 11/1/2017-10/31/2022. Insup Lee (PI), Bill Hanson, Oleg Sokolsky, James Weimer, Andrea Gabrielli, Maurizio Cereda, Jin-Oh Hahn, Mary Cummings, Miroslav Pajic, Lu Feng

[DG4] *CPS: Medium: Collaborative Research: SPMS: Secure Personalized Medical Systems: From Theory to Practice*. National Science Foundation, $1M, 11/1/2017-10/31/2021. Saswati Sarkar (PI), James Weimer, Ioannis Paschalidis.

[DG3] *SCH: INT: Improving Safety and Adherence of Pain Management Through Predictive Monitoring and Analysis*. National Science Foundation, $900K, 3/1/2017-2/28/2020. Insup Lee (PI), Oleg Sokolsky, James Weimer, Andrea Gabrielli, Maurizio Cereda, Michael Ashburn, Eric VanEpps

[DG2] *QuBBD: Developing Robust Classification Techniques for Polysomnography Data to Diagnose Depression*. National Science Foundation, $640K, 3/1/2017-2/28/2020. James Weimer (PI), Nalaka Gooneratne, Michael Thase.

[DG1] *CPS: Frontier: Collaborative Research: Rigorous Design and Analysis of Closed-Loop Medical CPS*. National Science Foundation, $6M, 11/1/2016-10/31/2021. Insup Lee (PI), Bill Hanson, George Pappas, Rita Powell, Oleg Sokolsky, James Weimer, Andrea Gabrielli, Maurizio Cereda, Jin-Oh Hahn, Mary Cummings, Miroslav Pajic, Lu Feng

ENTREPRENEURIAL ACTIVITIES

- **Co-Founder of Neuralert Technologies, LLC**
  Robust wearable monitors to rapidly identify critically important neurological events such as stroke. Co-founder and developer of physiological signal processing algorithms.
  https://neuralert.co/

- **Co-Founder of Vasowatch LLC**
  Robust wearable monitors to provide early detection of postpartum hemorrhage. Co-founder and developer of physiological signal processing algorithms.
  https://www.vasowatch.com/
