## Personal Statement

---

As a junior web developer with a background in Meteorology and Climate Science, I am driven by a passion for solving real-world problems through technology. My journey into backend development has equipped me with skills in Node.js, Express.js, and MongoDB, enabling me to create efficient RESTful APIs, optimize database performance, and write clean, maintainable code.

My studies in climate science inspire me to explore innovative tech solutions that address environmental challenges, merging my interests in science and technology. I thrive on learning new skills, collaborating with others, and contributing to meaningful projects that make a difference. With a commitment to continuous growth, I'm excited to tackle challenges, learn from experienced developers, and leave a positive impact through my work.

## Skills

---

### Technical

- **Programming & Development:** Node.js | Express.js | MongoDB | JavaScript | HTML | CSS
- **Project & Program Management:** Asana
- **Database & Version Control:** Git | GitHub | Firebase
- **Tools & Communication:** Postman | Thunder Client | Zoom| Google Workspace
