

Unlock with Faith

Nimbus · Last updated 2 August 2026

Everything stays on your phone. Unlock with Faith has no servers, no accounts, no analytics, and no advertising. Nimbus never receives your data, because there is nowhere for it to go. This policy explains exactly what the app stores on your device and why it asks for each permission.

1. What data is collected

We collect no personal data. Nothing you do in the app is sent to Nimbus or to anyone else.

The app saves the following on your device only:

- **Your blocklist** — which apps you have chosen to block
- **Focus sessions** — session lengths, schedules, and whether a session is currently running
- **Prayer settings** — calculation method, madhab, manual time adjustments, and which alerts you want
- **Approximate location** — coordinates used to work out prayer times, replaced whenever they are refreshed
- **Dhikr and reminder preferences**

This sits in the app's private storage, which Android keeps sealed off from other apps. We have no way to reach it.

The app does not collect your name, email address, phone number, contacts, photos, files, messages, browsing history, device identifiers, or any account information.

2. Permissions and why they're needed

Android asks you to approve each of these separately. You can withdraw any of them at any time in Settings.

Accessibility Service — blocking apps

This is how blocking works. Android requires an accessibility service to notice when a blocked app opens and to bring up the blocking screen.

The service reads one thing: which app is in the foreground right now, so it can be checked against your blocklist. It does not read the contents of your screen, your keystrokes, your passwords, or anything you type. Nothing it observes is recorded, kept, or transmitted.

Turn it off in Android Settings whenever you like. Blocking stops until you turn it back on; nothing else in the app is affected.

Usage Access (PACKAGE_USAGE_STATS)

Lets the app see which apps are running and for how long, so a focus session can enforce your blocklist and show you honest session statistics. This is read on the device and never uploaded.

Display over other apps (SYSTEM_ALERT_WINDOW)

Draws the blocking screen on top of an app you have chosen to block, and shows short Dhikr reminders during a session. This permission only allows drawing over the screen — it gives no ability to see what is underneath.

Notifications (POST_NOTIFICATIONS)

Delivers prayer time alerts and focus session status. You choose which alerts you want inside the app, and you can silence all of them in Android Settings.

Approximate location (ACCESS_COARSE_LOCATION)

Prayer times depend on where you are. The app uses your approximate location to calculate them on the device using standard astronomical formulas. The coordinates are not sent to any server, ours or anyone else's, and no location history is kept.

If you would rather not grant this, set your city manually instead and the app will stop asking for location.

Run at startup (RECEIVE_BOOT_COMPLETED)

If your phone restarts in the middle of a focus session, this lets the app restore the session and re-schedule your prayer notifications. Without it, a restart would quietly cancel both.

3. Data sharing

None. With anyone. Ever.

We do not sell, rent, trade, or share your information. The app contains no advertising networks, no analytics SDKs, no crash reporting services, no social integrations, and no third-party trackers of any kind.

Because the app has no server, there is no stored data for us to disclose — including if we were ever legally compelled to hand something over.

4. Children's privacy

The app is suitable for all ages. It does not knowingly collect personal information from children under 13, or from anyone else, because it does not collect personal information at all.

If you are a parent or guardian and have a question about how the app works on your child's device, please write to us at the address below.

5. Data security

Your settings are protected by Android's app sandbox, which stops other apps from reading files belonging to Unlock with Faith.

Because nothing leaves your device, there is no data in transit for anyone to intercept, and no database of ours that could be breached.

The one risk outside our control is physical access to an unlocked phone. Using a screen lock is the best protection.

6. Your rights and choices

- **Delete everything.** Uninstalling the app removes all of its data permanently. No copy exists anywhere else.
- **Start fresh without uninstalling.** Go to Settings › Apps › Unlock with Faith › Storage › Clear data.
- **Withdraw any permission.** Android Settings, at any time. The feature that relied on it stops working; nothing else changes.
- **Export or correct your data.** Rights of this kind, including those under the GDPR and similar laws, apply to data a company holds about you. We hold none, so there is nothing for us to retrieve, amend, or erase on your behalf. Your data is already entirely in your hands.

7. Changes to this policy

If we change how the app handles information, we will update this page and change the date at the top.

If a change is significant — for example, if a future version offered an optional account or cloud backup — we will explain it inside the app before it takes effect and ask for your permission where consent is required. Features like that would always be opt-in.

8. Contact us

Questions about this policy, or about anything the app does with your information, are welcome.

9. Account Deletion

Unlock with Faith, developed by **Nimbus**, lets you delete your account and its data at any time. You can do this yourself in the app, or ask us to do it for you.

Option 1 — Delete it in the app

1. Open Unlock with Faith
2. Go to **Settings** → **Account** → **Delete account**
3. Confirm when prompted

Deletion is immediate and permanent. It cannot be undone.

Option 2 — Ask us by email

Send an email with the subject "**Delete my account**" to mouhanedakermi383@gmail.com, from the email address registered to your account. We complete these requests within 30 days.

What gets deleted

- Your account email and user ID
- Profile details you provided — name, phone number, date of birth
- Any data synced under your account

What was never on our servers

These stay on your device and are removed when you uninstall the app:

- Prayer time preferences
- Focus session history
- Your blocked apps list
- Dhikr and usage statistics

What we keep afterwards

Nothing, in almost every case. The one exception is anti-fraud and abuse logs, which we may retain for up to 90 days where the law requires it. These are then deleted automatically.
